Modification Record

Version 0.3.0	Jun. 15, 2009	- Pre-release (trial version)
Version 0.3.1	Jun. 19, 2009	- Fixed a typo.
Version 0.3.2	Jul. 16, 2009	- Fixed a typo.

Acknowledgements

IPv6 Forum would like to acknowledge the efforts of the following organizations and commentators in the development of this test specification.

- IPv6 Promotion Council
Certification Working Group
SIP IPv6 Sub Working Group
BII Group

4. Test Profile: User Equipment operation	53
4.1 Registration.....	53
4.1.1 UE-RG-B-1 - Initial registration and subscription for the registration state event package (SIP default port values).....	53
4.1.2 UE-RG-B-2 - User-initiated reregistration.....	60
4.1.3 UE-RG-B-3 - Network-initiated re-authentication.....	65
4.1.4 UE-RG-B-4 - User-initiated reregistration.....	72
4.1.5 UE-RG-B-5 - Network-initiated deregistration with rejected event	79
4.1.6 UE-RG-B-6 - Network-initiated deregistration with deactivated event	85
4.1.7 UE-RG-B-7 - Reception of 423 response to initial registration.....	94
4.1.8 UE-RG-B-8 - Re-subscription for the registration state event package	100

4.1.9 UE-RG-B-9 - Reception of 481 response to subscription for the registration state event package.....	107
4.1.10 UE-RG-B-10 - Reception of a new service-route to reregistration.....	113
4.1.11 UE-RG-B-11 - Reception of 423 response to reregistration.....	122
4.1.12 UE-RG-B-12 - Reception of 408 response to reregistration.....	127
4.1.13 UE-RG-B-13 - Reception of 500 response to reregistration.....	136
4.1.14 UE-RG-B-14 - Reception of 504 response to reregistration.....	144
4.1.15 UE-RG-B-15 - Timer F expiration (Registration).....	153
4.1.16 UE-RG-B-16 - Reception of 401 response with no Security-Server header to initial registration	161
4.1.17 UE-RG-B-17 - Charge from the old SAs to the new SAs.....	166
4.1.18 UE-RG-B-18 - Invalid authentication parameter (MAC) and 403 response	176
4.1.19 UE-RG-B-19 - Invalid authentication parameter(SQN)	189
4.1.20 UE-RG-B-20 - User-initiated deregistration and dialog release	198
4.1.21 UE-RG-B-21 - Reception of 401 response to user-initiated deregistration	207
4.1.22 UE-RG-B-22 - Reception of 503 response to subscription for the registration state event package.....	212
4.1.23 UE-RG-B-23 - Security association (DES-EDE3-CBC and HMAC-MD5-96)	216
4.1.24 UE-RG-B-24 - Security association (AES-CBC and HMAC-SHA-1-96).....	223
4.2 Session Establishment	230
4.2.1 UE-SE-B-1 - Session initiation and termination (Sends INVITE and receives BYE).....	230
4.2.2 UE-SE-B-2 - Session initiation and termination (Sends INVITE and sends BYE).....	238
4.2.3 UE-SE-B-3 - Session initiation and termination (Receives INVITE and receives BYE).....	245
4.2.4 UE-SE-B-4 - Session initiation and termination (Receives INVITE and sends BYE).....	252
4.2.5 UE-SE-B-5 - Call Cancellation (Sends INVITE and sends CANCEL)	260
4.2.6 UE-SE-B-6 - Call Cancellation (Receives INVITE and receives CANCEL).....	266
4.2.7 UE-SE-B-7 - SIP response received from the P-CSCF outside of the registration.....	273
4.2.8 UE-SE-B-8 - SIP Request received from the P-CSCF outside of the registration.....	281
4.2.9 UE-SE-B-9 - Receiving 503 response to INVITE.....	284
4.2.10 UE-SE-B-10 - Receiving forked 180 and response	293
4.3 SDP	303
4.3.1 UE-SD-B-1 - SDP offer which included one or more media lines which was offered with several codecs (Receives INVITE and sends BYE)	303
4.3.2 UE-SD-B-2 - SDP offer which included an IP address type that is not supported (Receives INVITE and sends BYE).....	310
4.4 OPTIONS.....	315
4.4.1 UE-OP-B-1 - OPTIONS request (Sends OPTIONS).....	315
4.4.2 UE-OP-B-2 - OPTIONS request (Receives OPTIONS).....	319
4.5 SIP timer	323
4.5.1 UE-TM-B-1 - Timer B expiration to INVITE	323
4.5.2 UE-TM-B-2 - Timer D expiration	327

4.5.3 UE-TM-B-3 - Timer H expiration	333
4.5.4 UE-TM-B-4 - Timer J expiration.....	337
4.5.5 UE-TM-B-5 - Timer F expiration (In Session).....	343
4.6 Sending Response	348
4.6.1 UE-SR-B-1 - Sending 400 response	348
4.6.2 UE-SR-B-2 - Sending 404 response	352
4.6.3 UE-SR-B-3 - Sending 405 response	357
4.6.4 UE-SR-B-4 - Sending 406 response	361
4.6.5 UE-SR-B-5 - Sending 414 response	366
4.6.6 UE-SR-B-6 - Sending 415 response	371
4.6.7 UE-SR-B-7 - Sending 416 response	376
4.6.8 UE-SR-B-8 - Sending 420 response	381
4.6.9 UE-SR-B-9 - Sending 480/486 response	386
4.6.10 UE-SR-B-10 - Sending 482 response	391
4.6.11 UE-SR-B-11 - Sending 489 response.....	401
4.6.12 UE-SR-B-12 - Sending 500 response	408
4.6.13 UE-SR-B-13 - Sending 505 response	417
4.7 Receiving Response	422
4.7.1 UE-RR-B-1 - Receiving 100 response	422
4.7.2 UE-RR-B-2 - Receiving 181 response (Call transfer by S-CSCFa2 to UEa2').....	432
4.7.3 UE-RR-B-3 - Receiving 182 response (Request is queued by P-CSCFa2).....	440
4.7.4 UE-RR-B-4 - Receiving 183 response	445
4.7.5 UE-RR-B-5 - Receiving 202 response	450
4.7.6 UE-RR-B-6 - Receiving 400 response	454
4.7.7 UE-RR-B-7 - Receiving 404 response	457
4.7.8 UE-SR-B-8 - Receiving 405 response.....	460
4.7.9 UE-RR-B-9 - Receiving 406 response	464
4.7.10 UE-RR-B-10 - Receiving 410 response	469
4.7.11 UE-RR-B-11 - Receiving 413 response.....	473
4.7.12 UE-RR-B-12 - Receiving 414 response	478
4.7.13 UE-RR-B-13 - Receiving 415 response	481
4.7.14 UE-RR-B-14 - Response 480 response	485
4.7.15 UE-RR-B-15 - Receiving 482 response	488
4.7.16 UE-RR-B-16 - Receiving 483 response	491
4.7.17 UE-RR-B-17 - Receiving 484 response	495
4.7.18 UE-RR-B-18 - Receiving 485 response	498
4.7.19 UE-RR-B-19 - Receiving 488 response	502
4.7.20 UE-RR-B-20 - Receiving 501 response	506
4.7.21 UE-RR-B-21 - Receiving 502 response	510
4.7.22 UE-RR-B-22 - Receiving 505 response	513
4.7.23 UE-RR-B-23 - Receiving 513 response	517
4.7.24 UE-RR-B-24 - Receiving 600 response	521
4.7.25 UE-RR-B-25 - Receiving 603 response	525
4.7.26 UE-RR-B-26 - Receiving 604 response	529

4.7.27 UE-RR-B-27 - Receiving 606 response	532
4.8 SigComp	536
4.8.1 UE-SC-B-1 - SigComp for IMS (Sends INVITE and receives BYE)	536
4.8.2 UE-SC-B-2 - SigComp for IMS (Receive INVITE and send BYE)	555
AUTHORS' LIST	570

1 Overview

This document describes details of the IMS Conformance Test. The format of the description block is as follows:

Description block

[NAME]	NAME is a name of the test.
[TARGET]	TARGET is a target node of the test.
[PURPOSE]	PURPOSE is a short statement describing what the test attempts to achieve. It is usually phrased as a simple assertion of the feature or capability to be tested.
[REFERENCE]	REFERENCE section contains some parts of specification related to the tests. It also shows the document names and section numbers.
[REQUIREMENT]	REQUIREMENT section specifies the functions and conditions that will be needed to perform the test.
[PARAMETER]	PARAMETER describes SIP URIs on the topology that relates to the test
[ADDRESS]	ADDRESS describes IP addresses on the topology that relates to the test.
[TOPOLOGY]	TOPOLOGY describes the network used in the test.
[INITIALIZATION]	INITIALIZATION describes step-by-step instructions for carrying out the setting before the test.
[PROCEDURE]	PROCEDURE describes step-by-step instructions for carrying out the test.
[OBSERVABLE RESULTS]	OBSERVABLE RESULTS describes expected result. If we can observe as same result as the description of Judgment, the NUT passes the test.

NOTE: There are common observable results in the category of OBSERVABLE RESULTS. Refer to Section 3.

Acronyms

UE	- IMS User Equipment
P-CSCF	- IMS Proxy- Call/Session Control Function
I-CSCF	- IMS Interrogating- Call/Session Control Function
S-CSCF	- IMS Serving- Call/Session Control Function
IF	- Interface
UNI	- User-Network Interface
NNI	- Network-Network Interface

Reference standards

The following documents are referenced in the test specifications.

[IMS]

- (1) TS 24.229: IP multimedia call control protocol based on Session Initiation Protocol (SIP) and Session Description Protocol (SDP); Stage 3(Relase 7), 3GPP TS 24.229 v7.8.0.
(<http://www.3gpp.org/ftp/Specs/html-info/24229.htm>)

[SIP/SDP]

- (2) RFC3261: SIP: Session Initiation Protocol (<http://www.ietf.org/rfc/rfc3261.txt>)
- (3) RFC3265: Session Initiation Protocol (SIP)-Specific Event Notification
(<http://www.ietf.org/rfc/rfc3265.txt>)
- (4) RFC3327: Session Initiation Protocol (SIP) Extension Header Field for Registering Non-Adjacent Contacts (<http://www.ietf.org/rfc/rfc3327.txt>)
- (5) RFC3455: Private Header (P-Header) Extensions to the Session Initiation Protocol (SIP) for the 3rd-Generation Partnership Project (3GPP)
(<http://www.ietf.org/rfc/rfc3455.txt>)
- (6) RFC3608: Session Initiation Protocol (SIP) Extension Header Field for Service Route Discovery During Registration (<http://www.ietf.org/rfc/rfc3608.txt>)

- (16) RFC3310: Hypertext Transfer Protocol (HTTP) Digest Authentication Using Authentication and Key Agreement (AKA) (<http://www.ietf.org/rfc/rfc3310.txt>)
- (17) RFC3329: Security Mechanism Agreement for the Session Initiation Protocol (SIP)
(<http://www.ietf.org/rfc/rfc3329.txt>)

Index

ex . [RFC3261 X.X.X]

Please refer to the the section in RFC3261

2 Requirements of conformance test

2.1 Requirements based on Policy of IMS IPv6 Ready Logo

[PRq]

1. Supported transport protocol is only UDP.
2. The path MTU is 1500 bytes.
3. Supported URI scheme is only SIP-URI.
4. Only unicast session is supported.

2.2 Other Requirements

[ORq]

1. INVITE requests includes the bodies and any other requests doesn't include the bodies.
2. IMS-AKA is mandatory at registration.

3 Common Observable Results

3.1 generic_sip_message

Generic judgement items for SIP message.

- The start-line, each message-header line, and the empty line MUST be terminated by a carriage-return line-feed sequence (CRLF).[RFC3261 7]
- Request-Line:
 - Applications sending SIP messages MUST include a SIP-Version of "SIP/2.0".
[RFC3261 7.1]
 - Implementations MUST send upper-case. [RFC3261 7.1]
- Header fields:
 - * Content-Length
 - Applications SHOULD use this field to indicate the size of the message-body to be transferred.[RFC3261 20.14]
 - * From
 - Even if the "display-name" is empty, the "name-addr" form MUST be used if the "addr-spec" contains a comma, question mark, or semicolon.

[RFC3261 20.20]

3.2 generic_REGISTER

Generic judgement items for REGISTER request.

See generic_sip_message

-The empty line MUST be present even if the message-body is not.[RFC3261 7]

- Request-Line:

-Request-URI SHALL be set to the SIP URI of the domain name of the home network.[TS24.229 5.1.1.2]

-The Request-URI MUST NOT contain unescaped space control characters. [RFC3261 7.1]

-The Request-URI MUST NOT be enclosed in "<>". [RFC3261 7.1]

-The "userinfo" and "@" components of the SIP URI MUST NOT be present. [RFC3261 10.2]

- Header fields:

-An Expires header field or the expires parameter within the Contact header field SHALL be set to the value of 600 000 seconds. [TS24.229 5.1.1.2]

-SIP request MUST contain To, From, CSeq, Call-ID, Max-Forwards, and Via header fields. [RFC3261 8.1.1]

-The client MUST add both a Require and Proxy-Require header field with the value "sec-agree" to its request.[RFC3329 2.3.1]

* Authorization header

-The username directive in Authorization header field SHALL be set to the value of the private user identity.[TS24.229 5.1.1.2]

-The realm directive in Authorization header field SHALL be set to the value of the domain name of the home network.[TS24.229 5.1.1.2]

-The uri directive in Authorization header field SHALL be set to the SIP URI of the domain name of the home network.[TS24.229 5.1.1.2]

-The nonce directive in Authorization header field SHALL be empty. [TS24.229 5.1.1.2]

-The response directive in Authorization header field SHALL be empty. [TS24.229 5.1.1.2]

-WWW-Authenticate, Authorization, Proxy-Authenticate or Proxy-Authorization MUST NOT be combined into a single header

field row. [RFC3261 7.3.1]

* Contact

- Contact header field SHALL be set to SIP URIs containing the IP address of the UE in the hostport parameter or FQDN. [TS24.229 5.1.1.2]
- The hostport parameter in Contact header field SHALL include the protected server port value if the REGISTER request is protected by a security association. [TS24.229 5.1.1.2]
- UACs SHOULD NOT use the "action" parameter. [RFC3261 10.2]
- Even if the "display-name" is empty, the "name-addr" form MUST be used if the "addr-spec" contains a comma, semicolon, or question mark. [RFC3261 20.10]

* Content-length

- If no body is present in a message, then the Content-Length header field value MUST be set to zero. [RFC3261 20.14]

* CSeq

- The Cseq method MUST match the method of Request-Line in the request. [RFC3261 8.1.1.5]
- The sequence number value in the CSeq header field MUST be expressible as a 32-bit unsigned integer. [RFC3261 8.1.1.5] [RFC3261 20.16]
- The sequence number value in the CSeq header field MUST be less than 2^{31} . [RFC3261 8.1.1.5]

* From

- From header field SHALL be set to the SIP URI that contains the public user identity to be registered or deregistered. [TS24.229 5.1.1.2]
- The From field MUST contain a new "tag" parameter, chosen by the UAC. [RFC3261 8.1.1.3]

* Max-Forwards

- A UAC MUST insert a Max-Forwards header field into each request it originates. [RFC3261 8.1.1.6]
- The Max-Forwards header field value SHOULD be 70. [RFC3261 8.1.1.6]

* To

- To header field SHALL be set to the SIP URI that contains the public user identity to be registered or deregistered. [TS24.229 5.1.1.2]
- A request outside of a dialog MUST NOT contain a To tag. [RFC3261 8.1.1.2]

-An address-of-record included in To header field MUST be a SIP URI or SIPS URI.[RFC3261 10.2]

* P-Access-Network-Info

-3GPP UA SHOULD NOT send P-Access-Network-Info header in any initial unauthenticated and unprotected request.[RFC3455 6.4]

* P-Called-Party-ID

-A UAC MUST NOT insert a P-Called-Party-ID header field in any SIP request or response.[RFC3455 4.2.2.1]

* Proxy-Require

-A UAC MUST insert a Proxy-Require header field into the request listing the option tag for that extension. [RFC3261 8.1.1.9]

* Security-Client

-The Security-Client header field SHALL be set to the security mechanism the UE supports, the IPsec layer algorithms the UE supports and the parameters needed for the security association setup.[TS24.229 5.1.1.2]

-A client wishing to use the security agreement of this specification MUST add a Security-Client header field to a request addressed to its first-hop proxy.[RFC3329 2.3.1]

* Supported

-The option tag "path " SHALL be contained in the Supported header field.[TS24.229 5.1.1.2]

-The UA SHOULD include the option tag "path" as a header field value in all Supported header fields.[RFC3327 5.1]

-The UA SHOULD include a Supported header field in all requests. [RFC3327 5.1]

* Via

-The IP address or FQDN of the UE SHALL be included in the sent-by field of the Via header field.[TS24.229 5.1.1.2]

-The protected server port value SHALL be included in the sent-by field of the Via header field for the UDP.[TS24.229 5.1.1.2]

-A UAC MUST insert a Via into that request. [RFC3261 8.1.1.7]

-The protocol name and protocol version in the Via header field MUST be SIP and 2.0. [RFC3261 8.1.1.7]

-The Via header field value MUST contain a branch parameter. [RFC3261 8.1.1.7]

-The branch ID MUST always begin with the characters "z9hG4bK".

[RFC3261 8.1.1.7]

-The client transport MUST insert a value of the "sent-by" field into the Via header field.[RFC3261 18.1.1]

- Security Associations behavior

-A Security-setup-line SHALL be included in REGISTER request in order to start the security mode set-up procedure.[TS33.203 7.2]

-The integrity and confidentiality of the REGISTER request for authentication and all following SIP messages SHALL be protected. [TS33.203 7.2]

3.3 generic_Auth_REGISTER

Generic judgement items for Auth_REGISTER request.

See generic_sip_message

-The header fields SHALL be populated as defined for the initial request with Authorization header field that includes value as received in the realm directive in the WWW Authenticate header field, and the private user identity and the correct authentication challenge response calculated.[TS24.229 5.1.1.5.1]

-The empty line MUST be present even if the message-body is not.[RFC3261 7]

-The client SHOULD NOT retry the same request without modification. [RFC3261 21.4]

- Request-Line

-The Request-URI MUST NOT contain unescaped space control characters. [RFC3261 7.1]

-The Request-URI MUST NOT be enclosed in "<>". [RFC3261 7.1]

-The "userinfo" and "@" components of the SIP URI MUST NOT be present. [RFC3261 10.2]

- Header fields

-SIP request MUST contain To, From, CSeq, Call-ID, Max-Forwards, and Via header fields.[RFC3261 8.1.1]

-This new request SHOULD have the same value of the Call-ID, To, and From of the previous request, but the CSeq should contain a new sequence number that is one higher than the previous. [RFC3261 8.1.3.5]

-The client MUST add both a Require and Proxy-Require header field with the value "sec-agree" to its request.[RFC3329 2.3.1]

-A subsequent SIP requests MUST also have both a Require and Proxy-Require header fields with the value "sec-agree".[RFC3329 2.3.1]

* Authorization

-WWW-Authenticate, Authorization, Proxy-Authenticate or Proxy-Authorization MUST NOT be combined into a single header field row. [RFC3261 7.3.1]

* Call-ID

-Call-ID of the security association protected REGISTER request which carries the authentication challenge response SHALL be set to the same value as the Call-ID of the 401 (Unauthorized) response. [TS24.229 5.1.1.5.1]
-The Call-ID header field SHOULD be the same in each registration from a UA.[RFC3261 8.1.1.4]
-All registrations from a UAC SHOULD use the same Call-ID header field value for registrations sent to a particular registrar. [RFC3261 10.2]

* Contact

-UACs SHOULD NOT use the "action" parameter.[RFC3261 10.2]
-Even if the "display-name" is empty, the "name-addr" form MUST be used if the "addr-spec" contains a comma, semicolon, or question mark.[RFC3261 20.10]

* Content-length

-If no body is present in a message, then the Content-Length header field value MUST be set to zero.[RFC3261 20.14]

* CSeq

-The Cseq method MUST match the method of Request-Line in the request.[RFC3261 8.1.1.5]
-The sequence number value in the CSeq header field MUST be expressible as a 32-bit unsigned integer. [RFC3261 8.1.1.5]
[RFC3261 20.16]
-The sequence number value in the CSeq header field MUST be less than 2^{31} . [RFC3261 8.1.1.5]
-A UA MUST increment the CSeq value by one for each REGISTER request with the same Call-ID.[RFC3261 10.2]

* From

-The From field MUST contain a new "tag" parameter, chosen by the UAC.[RFC3261 8.1.1.3]

* Max-Forwards

- A UAC MUST insert a Max-Forwards header field into each request it originates. [RFC3261 8.1.1.6]
- The Max-Forwards header field value SHOULD be 70. [RFC3261 8.1.1.6]

* P-Called-Party-ID

- A UAC MUST NOT insert a P-Called-Party-ID header field in any SIP request or response. [RFC3455 4.2.2.1]

* Proxy-Require

- A UAC MUST insert a Proxy-Require header field into the request listing the option tag for that extension. [RFC3261 8.1.1.9]

* Security-Client

- Security-Client header field that is identical to the Security-Client header field that was included in the previous REGISTER request SHALL be inserted into the request. [TS24.229 5.1.1.5.1]
- A client wishing to use the security agreement of this specification MUST add a Security-Client header field to a request addressed to its first-hop proxy. [RFC3329 2.3.1]

* Security-Verify

- The Security-Verify header field SHALL be mirrored the content of the Security-Server header field received in the 401 (Unauthorized) response. [TS24.229 5.1.1.5.1]
- A subsequent SIP requests MUST contain a Security-Verify header field that mirrors the server's list received previously in the Security-Server header field. [RFC3329 2.3.1]

* Supported

- The UA SHOULD include the option tag "path" as a header field value in all Supported header fields. [RFC3327 5.1]
- The UA SHOULD include a Supported header field in all requests. [RFC3327 5.1]

* To

- A request outside of a dialog MUST NOT contain a To tag. [RFC3261 8.1.1.2]
- An address-of-record included in To header field MUST be a

SIP URI or SIPS URI.[RFC3261 10.2]

* Via

- A UAC MUST insert a Via into that request. [RFC3261 8.1.1.7]
- The protocol name and protocol version in the Via header field MUST be SIP and 2.0. [RFC3261 8.1.1.7]
- The Via header field value MUST contain a branch parameter. [RFC3261 8.1.1.7]
- The branch ID MUST always begin with the characters "z9hG4bK". [RFC3261 8.1.1.7]
- The client transport MUST insert a value of the "sent-by" field into the Via header field.[RFC3261 18.1.1]

- Security Association behavior

- A temporary set of security associations SHALL be set up based on the static list and parameters it received in the 401 (Unauthorized) response and its capabilities sent in the Security-Client header field in the REGISTER request.[TS24.229 5.1.1.5.1]
- The temporary set of security associations SHALL be set up using the most preferred mechanism and algorithm returned by the P-CSCF and supported by the UE and using IK and CK as the shared key. [TS24.229 5.1.1.5.1]
- The parameters received in the Security-Server header field SHALL be used to setup the temporary set of security associations. [TS24.229 5.1.1.5.1]
- REGISTER request SHALL be sent using the temporary set of security associations to protect the message.[TS24.229 5.1.1.5.1]
- The integrity and confidentiality of the REGISTER request for authentication and all following SIP messages SHALL be protected. [TS33.203 7.2]
- The REGISTER request for authentication SHALL include the integrity and encryption algorithms list, SPI_P, and Port_P received in 401 (Unauthorized) response, and SPI_U, Port_U sent in the initial REGISTER request.[TS33.203 7.2]
- The REGISTER request for authentication to the P-CSCF SHALL be protected with the new outbound SA.[TS33.203 7.4.1a]
- All the subsequent SIP requests sent by the client to that server SHOULD make use of the security mechanism initiated in the previous step.[RFC3329 2.3.1]
- All clients MUST select HTTP Digest, TLS, IPsec, or any stronger method for the protection of the second request.[RFC3329 5]

3.4 generic_re_REGISTER

Generic judgement items for re_REGISTER request

See generic_sip_message

- The empty line **MUST** be present even if the message-body is not.[RFC3261 7]
- Registration refreshes **SHOULD** be sent to the same network address as the original registration.[RFC3261 10.2.4]
- Request-Line
 - Request-URI **SHALL** be set to the SIP URI of the domain name of the home network.[TS24.229 5.1.1.4]
 - The Request-URI **MUST NOT** contain unescaped space control characters. [RFC3261 7.1]
 - The Request-URI **MUST NOT** be enclosed in "<>". [RFC3261 7.1]
 - The "userinfo" and "@" components of the SIP URI **MUST NOT** be present. [RFC3261 10.2]
- Header fields
 - An Expires header field or the expires parameter within the Contact header field **SHALL** be set to the value of 600 000 seconds.[TS24.229 5.1.1.4]
 - SIP request **MUST** contain To, From, CSeq, Call-ID, Max-Forwards, and Via header fields. [RFC3261 8.1.1]
 - The client **MUST** add both a Require and Proxy-Require header field with the value "sec-agree" to its request.[RFC3329 2.3.1]
 - A subsequent SIP requests **MUST** also have both a Require and Proxy-Require header fields with the value "sec-agree".[RFC3329 2.3.1]
- * Authorization header
 - The username directive in Authorization header field **SHALL** be set to the value of the private user identity.[TS24.229 5.1.1.4]
 - The realm directive in Authorization header field **SHALL** be set to the value as received in the realm directive in the WWW Authenticate header field.[TS24.229 5.1.1.4]
 - The uri directive in Authorization header field **SHALL** be set to the SIP URI of the domain name of the home network. [TS24.229 5.1.1.4]
 - The nonce directive in Authorization header field **SHALL** be set to last received nonce value.[TS24.229 5.1.1.4]
 - The response directive in Authorization header field **SHALL** be set

to the last calculated response value. [TS24.229 5.1.1.4]

-WWW-Authenticate, Authorization, Proxy-Authenticate or Proxy-Authorization MUST NOT be combined into a single header field row. [RFC3261 7.3.1]

* From

-From header field SHALL be set to the SIP URI that contains the public user identity to be registered or deregistered. [TS24.229 5.1.1.4]
-The From field MUST contain a new "tag" parameter, chosen by the UAC. [RFC3261 8.1.1.3]

* Max-Forwards

-A UAC MUST insert a Max-Forwards header field into each request it originates. [RFC3261 8.1.1.6]
-The Max-Forwards header field value SHOULD be 70. [RFC3261 8.1.1.6]

* Call-ID

-The Call-ID header field SHOULD be the same in each registration from a UA. [RFC3261 8.1.1.4]
-All registrations from a UAC SHOULD use the same Call-ID header field value for registrations sent to a particular registrar. [RFC3261 10.2]
-A UA SHOULD use the same Call-ID for all registrations during a single boot cycle. [RFC3261 10.2.4]

* Contact

-Contact header field SHALL be set to IP address or FQDN and protected server port value. [TS24.229 5.1.1.4]
-UACs SHOULD NOT use the "action" parameter. [RFC3261 10.2]
-Even if the "display-name" is empty, the "name-addr" form MUST be used if the "addr-spec" contains a comma, semicolon, or question mark. [RFC3261 20.10]

* Content-length

-If no body is present in a message, then the Content-Length header field value MUST be set to zero. [RFC3261 20.14]

* CSeq

-The Cseq method MUST match the method of Request-Line in the request. [RFC3261 8.1.1.5]
-The sequence number value in the CSeq header field MUST be expressible as a 32-bit unsigned integer. [RFC3261 8.1.1.5]
[RFC3261 20.16]

- The sequence number value in the CSeq header field MUST be less than 2^{31} . [RFC3261 8.1.1.5]
- A UA MUST increment the CSeq value by one for each REGISTER request with the same Call-ID. [RFC3261 10.2]

* To

- To header field SHALL be set to the SIP URI that contains the public user identity to be registered or deregistered. [TS24.229 5.1.1.4]
- A request outside of a dialog MUST NOT contain a To tag. [RFC3261 8.1.1.2]
- An address-of-record included in To header field MUST be a SIP URI or SIPS URI. [RFC3261 10.2]

* P-Called-Party-ID

- A UAC MUST NOT insert a P-Called-Party-ID header field in any SIP request or response. [RFC3455 4.2.2.1]

* Proxy-Require

- A UAC MUST insert a Proxy-Require header field into the request listing the option tag for that extension. [RFC3261 8.1.1.9]

* Security-Client

- Security-Client header field SHALL be set to the security mechanism it supports, the IPsec layer algorithms for security and confidentiality protection it supports and the new parameter values needed for the setup of two new pairs of security associations. [TS24.229 5.1.1.4]
- A client wishing to use the security agreement of this specification MUST add a Security-Client header field to a request addressed to its first-hop proxy. [RFC3329 2.3.1]

* Security-Verify

- Security-Verify header field SHALL be set to the content of the Security-Server header received in the 401 (Unauthorized) response of the last successful authentication. [TS24.229 5.1.1.4]
- A subsequent SIP requests MUST contain a Security-Verify header field that mirrors the server's list received previously in the Security-Server header field. [RFC3329 2.3.1]

* Supported

- The option tag "path" SHALL be contained in Supported header field. [TS24.229 5.1.1.4][RFC3327 5.1]
- The UA SHOULD include the option tag "path" as a header field

value in all Supported header fields.[RFC3327 5.1]

- The UA SHOULD include a Supported header field in all requests.
[RFC3327 5.1]

* Via

- The IP address or FQDN of the UE and the protected server port value for the UDP SHALL be included in Via header field.[TS24.229 5.1.1.4]
- A UAC MUST insert a Via into that request. [RFC3261 8.1.1.7]
- The protocol name and protocol version in the Via header field MUST be SIP and 2.0. [RFC3261 8.1.1.7]
- The Via header field value MUST contain a branch parameter.
[RFC3261 8.1.1.7]
- The branch ID MUST always begin with the characters "z9hG4bK".
[RFC3261 8.1.1.7]
- The client transport MUST insert a value of the "sent-by" field into the Via header field.[RFC3261 18.1.1]

- Security Association behavior

- The reregistration SHALL be sent over the existing set of security associations that is associated with the related contact address.
[TS24.229 5.1.1.4]
- The REGISTER request SHALL be protected using a security association established as a result of an earlier registration.[TS24.229 5.1.1.4]
- A Security-setup-line SHALL be included in REGISTER request in order to start the security mode set-up procedure.[TS33.203 7.2]
- The integrity and confidentiality of the REGISTER request for authentication and all following SIP messages SHALL be protected.
[TS33.203 7.2]
- The first message in this registration SHOULD be protected with an SA created by a previous successful authentication if one exists.
[TS33.203 7.3.1.4]
- An already active pair of security associations SHALL be used to protect the REGISTER request.[TS33.203 7.4]
- A particular security association SHALL protect the certain messages in the authentication.[TS33.203 7.4.1a]
- The REGISTER request SHALL be protected with the old outbound security association if the initial REGISTER request was protected.
[TS33.203 7.4.1a]
- All the subsequent SIP requests sent by the client to that server SHOULD make use of the security mechanism initiated in the previous step.[RFC3329 2.3.1]

3.5 generic_de_REGISTER

Generic judgement items for re_REGISTER request.

See generic_sip_message

-The empty line MUST be present even if the message-body is not. [RFC3261 7]

- Request-Line

-Request-URI SHALL be set to the SIP URI of the domain name of the home network. [TS24.229 5.1.1.6]

-The Request-URI MUST NOT contain unescaped space control characters. [RFC3261 7.1]

-The Request-URI MUST NOT be enclosed in "<>". [RFC3261 7.1]

-The "userinfo" and "@" components of the SIP URI MUST NOT be present. [RFC3261 10.2]

- Header fields

-Expires header or the expires parameter of the Contact header field SHALL be set to the value of zero. [TS24.229 5.1.1.6]

-SIP request MUST contain To, From, CSeq, Call-ID, Max-Forwards, and Via header fields. [RFC3261 8.1.1]

-The REGISTER-specific Contact header field value of "*" applies to all registrations, but it MUST NOT be used unless the Expires header field is present with a value of "0". [RFC3261 10.2.2]

-The client MUST add both a Require and Proxy-Require header field with the value "sec-agree" to its request. [RFC3329 2.3.1]

-A subsequent SIP requests MUST also have both a Require and Proxy-Require header fields with the value "sec-agree". [RFC3329 2.3.1]

* Authorization

-The username directive in Authorization header field SHALL be set to the value of the private user identity. [TS24.229 5.1.1.6]

-The realm directive in Authorization header field SHALL be set to the value as received in the realm directive in the WWW-Authenticate header. [TS24.229 5.1.1.6]

-The uri directive in Authorization header field SHALL be set to the SIP URI of the domain name of the home network. [TS24.229 5.1.1.6]

-The nonce directive in Authorization header field SHALL be set to last received nonce value. [TS24.229 5.1.1.6]

- The response directive in Authorization header field SHALL be set to the last calculated response value.[TS24.229 5.1.1.6]
- WWW-Authenticate, Authorization, Proxy-Authenticate or Proxy-Authorization MUST NOT be combined into a single header field row. [RFC3261 7.3.1]

* Call-ID

- The Call-ID header field SHOULD be the same in each registration from a UA.[RFC3261 8.1.1.4]
- All registrations from a UAC SHOULD use the same Call-ID header field value for registrations sent to a particular registrar. [RFC3261 10.2]

* Contact

- Contact header field SHALL be set to either the value of "*" or SIP URI(s) that contain(s) in the hostport parameter the IP address of the UE or FQDN and the protected server port value bound to the security association.[TS24.229 5.1.1.6]
- UACs SHOULD NOT use the "action" parameter.[RFC3261 10.2]
- Even if the "display-name" is empty, the "name-addr" form MUST be used if the "addr-spec" contains a comma, semicolon, or question mark.[RFC3261 20.10]

* Content-length

- If no body is present in a message, then the Content-Length header field value MUST be set to zero.[RFC3261 20.14]

* CSeq

- The Cseq method MUST match the method of Request-Line in the request. [RFC3261 8.1.1.5]
- The sequence number value in the CSeq header field MUST be expressible as a 32-bit unsigned integer. [RFC3261 8.1.1.5] [RFC3261 20.16]
- The sequence number value in the CSeq header field MUST be less than 2^{31} . [RFC3261 8.1.1.5]
- A UA MUST increment the CSeq value by one for each REGISTER request with the same Call-ID.[RFC3261 10.2]

* From

- From header field SHALL be set to the SIP URI that contains the public user identity to be registered or deregistered.[TS24.229 5.1.1.6]
- The From field MUST contain a new "tag" parameter, chosen by the UAC.[RFC3261 8.1.1.3]

* Max-Forwards

- A UAC MUST insert a Max-Forwards header field into each request it originates. [RFC3261 8.1.1.6]
- The Max-Forwards header field value SHOULD be 70. [RFC3261 8.1.1.6]

* P-Called-Party-ID

- A UAC MUST NOT insert a P-Called-Party-ID header field in any SIP request or response.[RFC3455 4.2.2.1]

* Proxy-Require

- A UAC MUST insert a Proxy-Require header field into the request listing the option tag for that extension. [RFC3261 8.1.1.9]

* Security-Client

- Security-Client header field SHALL be set to the security mechanism it supports, the IPsec layer algorithms for integrity and confidentiality protection it supports and the new parameter values needed for the setup of two new pairs of security associations.[TS24.229 5.1.1.6]
- A client wishing to use the security agreement of this specification MUST add a Security-Client header field to a request addressed to its first-hop proxy.[RFC3329 2.3.1]

* Security-Verify

- Security-Verify header field SHALL be set to the content of the Security-Server header received in the 401 (Unauthorized) response of the last successful authentication.[TS24.229 5.1.1.6]
- A subsequent SIP requests MUST contain a Security-Verify header field that mirrors the server's list received previously in the Security- Server header field.[RFC3329 2.3.1]

* Supported

- The UA SHOULD include the option tag "path" as a header field value in all Supported header fields.[RFC3327 5.1]
- The UA SHOULD include a Supported header field in all requests. [RFC3327 5.1]

* To

- To header field SHALL be set to the SIP URI that contains the public user identity to be registered or deregistered.[TS24.229 5.1.1.6]
- A request outside of a dialog MUST NOT contain a To tag.

[RFC3261 8.1.1.2]

- An address-of-record included in To header field MUST be a SIP URI or SIPS URI.[RFC3261 10.2]

* Via

- The IP address or FQDN of the UE and the protected server port value for the UDP SHALL be included in Via header field.[TS24.229 5.1.1.6]
- A UAC MUST insert a Via into that request. [RFC3261 8.1.1.7]
- The protocol name and protocol version in the Via header field MUST be SIP and 2.0. [RFC3261 8.1.1.7]
- The Via header field value MUST contain a branch parameter. [RFC3261 8.1.1.7]
- The branch ID MUST always begin with the characters "z9hG4bK". [RFC3261 8.1.1.7]
- The client transport MUST insert a value of the "sent-by" field into the Via header field.[RFC3261 18.1.1]

- Security Association behavior

- The REGISTER request SHALL be protected using a security association established as a result of an earlier registration.[TS24.229 5.1.1.6]
- A Security-setup-line SHALL be included in REGISTER request in order to start the security mode set-up procedure.[TS33.203 7.2]
- The integrity and confidentiality of the REGISTER request for authentication and all following SIP messages SHALL be protected. [TS33.203 7.2]
- All the subsequent SIP requests sent by the client to that server SHOULD make use of the security mechanism initiated in the previous step.[RFC3329 2.3.1]

3.6 generic_SUBSCRIBE

Generic judgement items for SUBSCRIBE request.

See generic_sip_message

- The empty line MUST be present even if the message-body is not. [RFC3261 7]

- Request-Line:

- Request-URI SHALL be set to the resource to which the UE wants to be subscribed to.[TS24.229 5.1.1.3]

- The Request-URI MUST NOT contain unescaped space control characters. [RFC3261 7.1]
- The Request-URI MUST NOT be enclosed in "<>". [RFC3261 7.1]
- The initial Request-URI of the message SHOULD be set to the value of the URI in the To field.[RFC3261 8.1.1.1]

- Header fields:

- SIP request MUST contain To, From, CSeq, Call-ID, Max-Forwards, and Via header fields. [RFC3261 8.1.1]
- These requests MUST also have both a Require and Proxy-Require header fields with the value "sec-agree".[RFC3329 2.3.1]

* Allow-Events

- Any node implementing one or more event packages SHOULD include an appropriate "Allow-Events" header indicating all supported events in all methods which initiate dialogs and their responses and OPTIONS responses.[RFC3265 3.3.7]

* Contact

- Contact header field SHALL be set to IP address or FQDN and protected server port value as in the initial registration.[TS24.229 5.1.1.3]
- The protected server port SHALL be included in the address in the Contact header field if UE did not insert a GRUU.[TS24.229 5.1.2A.1]
- The Contact header field MUST be present and contain exactly one SIP or SIPS URI in any request that can result in the establishment of a dialog.[RFC3261 8.1.1.8]
- Even if the "display-name" is empty, the "name-addr" form MUST be used if the "addr-spec" contains a comma, semicolon, or question mark.[RFC3261 20.10]

* Content-length

- If no body is present in a message, then the Content-Length header field value MUST be set to zero.[RFC3261 20.14]

* CSeq

- The Cseq method MUST match the method of Request-Line in the request.[RFC3261 8.1.1.5][RFC3261 12.2.1.1]
- The sequence number value in the CSeq header field MUST be expressible as a 32-bit unsigned integer. [RFC3261 8.1.1.5][RFC3261 20.16]
- The sequence number value in the CSeq header field MUST be less than 2^{31} . [RFC3261 8.1.1.5]

* Event

- Event header field SHALL be set to the "reg" event package.
[TS24.229 5.1.1.3]
- Subscribers MUST include exactly one "Event" header in SUBSCRIBE requests, indicating to which event or class of events they are subscribing.[RFC3265 3.1.2]
- There MUST be exactly one event type listed per event header.
[RFC3265 7.2.1]

* Expires

- Expires header field SHALL be set to 600 000 seconds as the value desired for the duration of the subscription.[TS24.229 5.1.1.3]
- The SUBSCRIBE requests SHOULD contain an "Expires" header.
[RFC3265 3.1.1]

* From

- From header field SHALL be set to a SIP URI that contains the public user identity used for subscription.[TS24.229 5.1.1.3]
- The From field MUST contain a new "tag" parameter, chosen by the UAC.
[RFC3261 8.1.1.3]

* Max-Forwards

- A UAC MUST insert a Max-Forwards header field into each request it originates.[RFC3261 8.1.1.6]
- The Max-Forwards header field value SHOULD be 70.[RFC3261 8.1.1.6]

* P-Called-Party-ID

- A UAC MUST NOT insert a P-Called-Party-ID header field in any SIP request or response.[RFC3455 4.2.2.1]

* P-Preferred-Identity

- The P-Preferred-Identity header field SHALL be used as the public user identity for the request if a P-Preferred-Identity was included.
[TS24.229 5.1.2A.1]
- The default public user identity for the security association SHALL be used as the public user identity for the request if no P-Preferred-Identity was included.[TS24.229 5.1.2A.1]

* Proxy-Require

- A UAC MUST insert a Proxy-Require header field into the request listing the option tag for that extension. [RFC3261 8.1.1.9]

* Route

- A proper preloaded Route header value SHALL be built in Route header for all new dialog and standalone transactions.[TS24.229 5.1.2A.1]
- A list of Route header values made out of the P-CSCF URI and the values received in the Service-Route header saved from the 200 (OK) response to the last registration SHALL be built in Route header.[TS24.229 5.1.2A.1]
- If the request contains a Route header field, the request SHOULD be sent to the locations derived from its topmost value.
[RFC3261 8.1.2]

* Security-Verify

- A subsequent SIP requests MUST contain a Security-Verify header field that mirrors the server's list received previously in the Security- Server header field.[RFC3329 2.3.1]

* To

- To header field SHALL be set to a SIP URI that contains the public user identity used for subscription.[TS24.229 5.1.1.3]
- A request outside of a dialog MUST NOT contain a To tag.
[RFC3261 8.1.1.2]

* Via

- The protected server port SHALL be included in the Via header entry relating to the UE.[TS24.229 5.1.2A.1]
- A UAC MUST insert a Via into that request. [RFC3261 8.1.1.7]
- The protocol name and protocol version in the Via header field MUST be SIP and 2.0. [RFC3261 8.1.1.7]
- The Via header field value MUST contain a branch parameter.
[RFC3261 8.1.1.7]
- The branch ID MUST always begin with the characters "z9hG4bK".
[RFC3261 8.1.1.7]
- The client transport MUST insert a value of the "sent-by" field into the Via header field.[RFC3261 18.1.1]

- Security Association behavior

- All the subsequent SIP requests sent by the client to that server SHOULD make use of the security mechanism initiated in the previous step.[RFC3329 2.3.1]

3.7 generic_re_SUBSCRIBE

Generic judgement items for Re-SUBSCRIBE request.

See generic_sip_message

-The empty line MUST be present even if the message-body is not.[RFC3261 7]

- Request-Line:

-The Request-URI MUST NOT contain unescaped space control characters.
[RFC3261 7.1]

-The Request-URI MUST NOT be enclosed in "<>". [RFC3261 7.1]

-The UAC MUST place the remote target URI into the Request-URI if the route set is not empty and the first URI in the route set contains the lr parameter.[RFC3261 12.2.1.1]

- Header fields:

-SIP request MUST contain To, From, CSeq, Call-ID, Max-Forwards, and Via header fields. [RFC3261 8.1.1]

-A subsequent SIP requests MUST also have both a Require and Proxy-Require header fields with the value "sec-agree".[RFC3329 2.3.1]

* Allow-Events

-Any node implementing one or more event packages SHOULD include an appropriate "Allow-Events" header indicating all supported events in all methods which initiate dialogs and their responses and OPTIONS responses.[RFC3265 3.3.7]

* Call-ID

-The Call-ID header field MUST be the same for all requests and responses sent by either UA in a dialog.[RFC3261 8.1.1.4]

-The Call-ID of the request MUST be set to the Call-ID of the dialog.
[RFC3261 12.2.1.1]

* Contact

-The protected server port SHALL be included in the address in the Contact header field if UE did not insert a GRUU.[TS24.229 5.1.2A.1]

-Even if the "display-name" is empty, the "name-addr" form MUST be used if the "addr-spec" contains a comma, semicolon, or question mark.
[RFC3261 20.10]

* Content-length

- If no body is present in a message, then the Content-Length header field value MUST be set to zero.[RFC3261 20.14]

* CSeq

- The Cseq method MUST match the method of Request-Line in the request. [RFC3261 8.1.1.5]
- The sequence number value in the CSeq header field MUST be expressible as a 32-bit unsigned integer.[RFC3261 8.1.1.5][RFC3261 20.16]
- The sequence number value in the CSeq header field MUST be less than 2^{31} . [RFC3261 8.1.1.5]
- Requests within a dialog MUST contain strictly monotonically increasing and contiguous CSeq sequence numbers in each direction.[RFC3261 12.2.1.1]
- The value of the local sequence number MUST be incremented by one if the local sequence number is not empty.[RFC3261 12.2.1.1]
- The value of the local sequence number that be incremented by one MUST be placed into the CSeq header field if the local sequence number is not empty.[RFC3261 12.2.1.1]

* Event

- Subscribers MUST include exactly one "Event" header in SUBSCRIBE requests, indicating to which event or class of events they are subscribing.[RFC3265 3.1.2]
- There MUST be exactly one event type listed per event header. [RFC3265 7.2.1]

* Expires

- The SUBSCRIBE requests SHOULD contain an "Expires" header. [RFC3265 3.1.1]

* From

- The From URI of the request MUST be set to the local URI from the dialog state.[RFC3261 12.2.1.1]
- The tag in the From header field of the request MUST be set to the local tag of the dialog ID.[RFC3261 12.2.1.1]

* Max-Forwards

- A UAC MUST insert a Max-Forwards header field into each request it originates. [RFC3261 8.1.1.6]
- The Max-Forwards header field value SHOULD be 70. [RFC3261 8.1.1.6]

* P-Called-Party-ID

- A UAC MUST NOT insert a P-Called-Party-ID header field in any SIP

request or response.[RFC3455 4.2.2.1]

* Proxy-Require

-A UAC MUST insert a Proxy-Require header field into the request listing the option tag for that extension. [RFC3261 8.1.1.9]

* Route

-If the request contains a Route header field, the request SHOULD be sent to the locations derived from its topmost value. [RFC3261 8.1.2]

-The UAC MUST include a Route header field containing the route set values in order including all parameters if the route set is not empty, and the first URI in the route set contains the lr parameter.[RFC3261 12.2.1.1]

* Security-Verify

-A subsequent SIP requests MUST contain a Security-Verify header field that mirrors the server's list received previously in the Security- Server header field.[RFC3329 2.3.1]

* To

-The URI in the To field of the request MUST be set to the remote URI from the dialog state.[RFC3261 12.2.1.1]

-The tag in the To header field of the request MUST be set to the remote tag of the dialog ID.[RFC3261 12.2.1.1]

* Via

-The protected server port SHALL be included in the Via header entry relating to the UE.[TS24.229 5.1.2A.1]

-A UAC MUST insert a Via into that request. [RFC3261 8.1.1.7]

-The protocol name and protocol version in the Via header field MUST be SIP and 2.0.[RFC3261 8.1.1.7]

-The Via header field value MUST contain a branch parameter. [RFC3261 8.1.1.7]

-The branch ID MUST always begin with the characters "z9hG4bK". [RFC3261 8.1.1.7]

-The client transport MUST insert a value of the "sent-by" field into the Via header field.[RFC3261 18.1.1]

- Security Association behavior

-All the subsequent SIP requests sent by the client to that server SHOULD make use of the security mechanism initiated in the previous

step.[RFC3329 2.3.1]

3.8 generic_200-NOTIFY

Generic judgement items for 200-NOTIFY response.

See generic_sip_message

- The empty line MUST be present even if the message-body is not. [RFC3261 7]
- TUs SHOULD respond immediately to non-INVITE requests.[RFC3261 17.1]

- Header fields:

* Call-ID

- The Call-ID header field MUST be the same for all requests and responses sent by either UA in a dialog.[RFC3261 8.1.1.4]
- The Call-ID header field of the response MUST equal the Call-ID header field of the request.[RFC3261 8.2.6.2]

* Content-length

- If no body is present in a message, then the Content-Length header field value MUST be set to zero.[RFC3261 20.14]

* CSeq

- The CSeq header field of the response MUST equal the CSeq field of the request.[RFC3261 8.2.6.2]

* From

- The From field of the response MUST equal the From header field of the request.[RFC3261 8.2.6.2]

* P-Called-Party-ID

- A UAC MUST NOT insert a P-Called-Party-ID header field in any SIP request or response.[RFC3455 4.2.2.1]

* To

- If a request contained a To tag in the request, the To header field in the response MUST equal that of the request.[RFC3261 8.2.6.2] -The same tag MUST be used for all responses to that request, both final and provisional. [RFC3261 8.2.6.2]

* Via

- The Via header field values in the response MUST equal the Via header

field values in the request and MUST maintain the same ordering.

[RFC3261 8.2.6.2][RFC3261 8.2.6.2]

- If the host portion of the "sent-by" parameter contains a domain name, or if it contains an IP address that differs from the packet source address, the server MUST add a "received" parameter to that Via header field value.[RFC3261 18.2.1]
- The "received" parameter MUST contain the source address from which the packet was received.[RFC3261 18.2.1]
- The response MUST be sent to the address in the "received" parameter, using the port indicated in the "sent-by" value, or using port 5060 if none is specified explicitly.[RFC3261 18.2.2]

3.9 generic_INVITE

Generic judgement items for INVITE request.

See generic_sip_message

- Request-Line:

- The Request-URI MUST NOT contain unescaped space control characters. [RFC3261 7.1]
- The Request-URI MUST NOT be enclosed in "<>". [RFC3261 7.1]
- The initial Request-URI of the message SHOULD be set to the value of the URI in the To field.[RFC3261 8.1.1.1]

- Header fields:

- SIP request MUST contain To, From, CSeq, Call-ID, Max-Forwards, and Via header fields. [RFC3261 8.1.1]
- These requests MUST also have both a Require and Proxy-Require header fields with the value "sec-agree".[RFC3329 2.3.1]

* Allow

- A UA that supports INVITE MUST also support ACK, CANCEL and BYE. [RFC3261 13.1]
- An Allow header field SHOULD be present in the INVITE. [RFC3261 13.2.1]

* Allow-Events

- Any node implementing one or more event packages SHOULD include an appropriate "Allow-Events" header indicating all supported events in all methods which initiate dialogs and their responses and

OPTIONS responses.[RFC3265 3.3.7]

* Contact

- The protected server port SHALL be included in the address in the Contact header field if UE did not insert a GRUU.[TS24.229 5.1.2A.1]
- The Contact header field MUST be present and contain exactly one SIP or SIPS URI in any request that can result in the establishment of a dialog.[RFC3261 8.1.1.8]
- Even if the "display-name" is empty, the "name-addr" form MUST be used if the "addr-spec" contains a comma, semicolon, or question mark.[RFC3261 20.10]

* Content-Encoding

- If the body has not undergone any encoding such as compression, then Content-Encoding MUST be omitted. [RFC3261 7.4.1]

* Content-Type

- The Internet media type of the message body MUST be given by the Content-Type header field.[RFC3261 7.4.1]
- The Content-Type header field MUST be present if the body is not empty.[RFC3261 20.15]

* CSeq

- The Cseq method MUST match the method of Request-Line in the request. [RFC3261 8.1.1.5]
- The sequence number value in the CSeq header field MUST be expressible as a 32-bit unsigned integer. [RFC3261 8.1.1.5][RFC3261 20.16]
- The sequence number value in the CSeq header field MUST be less than $2^{**}31$. [RFC3261 8.1.1.5]

* From

- The From field MUST contain a new "tag" parameter, chosen by the UAC. [RFC3261 8.1.1.3]

* Max-Forwards

- A UAC MUST insert a Max-Forwards header field into each request it originates.[RFC3261 8.1.1.6]
- The Max-Forwards header field value SHOULD be 70.[RFC3261 8.1.1.6]

* P-Called-Party-ID

- A UAC MUST NOT insert a P-Called-Party-ID header field in any SIP request or response.[RFC3455 4.2.2.1]

* Route

- A proper preloaded Route header value SHALL be built in Route header for all new dialog and standalone transactions.[TS24.229 5.1.2A.1]
- A list of Route header values made out of the P-CSCF URI and the values received in the Service-Route header saved from the 200 (OK) response to the last registration SHALL be built in Route header.[TS24.229 5.1.2A.1]
- If the request contains a Route header field, the request SHOULD be sent to the locations derived from its topmost value.[RFC3261 8.1.2]

* P-Preferred-Identity

- The P-Preferred-Identity header field SHALL be used as the public user identity for the request if a P-Preferred-Identity was included. [TS24.229 5.1.2A.1]
- The default public user identity for the security association SHALL be used as the public user identity for the request if no P-Preferred-Identity was included.[TS24.229 5.1.2A.1]

* Proxy-Require

- A UAC MUST insert a Proxy-Require header field into the request listing the option tag for that extension. [RFC3261 8.1.1.9]

* Security-Verify

- A subsequent SIP requests MUST contain a Security-Verify header field that mirrors the server's list received previously in the Security- Server header field.[RFC3329 2.3.1]

* Supported

- A Supported header field SHOULD be present in the INVITE. [RFC3261 13.2.1]

* To

- A request outside of a dialog MUST NOT contain a To tag. [RFC3261 8.1.1.2]

* Via

- The protected server port SHALL be included in the Via header entry relating to the UE.[TS24.229 5.1.2A.1]
- A UAC MUST insert a Via into that request. [RFC3261 8.1.1.7]
- The protocol name and protocol version in the Via header field MUST be SIP and 2.0. [RFC3261 8.1.1.7]
- The Via header field value MUST contain a branch parameter. [RFC3261 8.1.1.7]

- The branch ID MUST always begin with the characters "z9hG4bK".
[RFC3261 8.1.1.7]
- The client transport MUST insert a value of the "sent-by" field
into the Via header field.[RFC3261 18.1.1]
- Bodies fields:
 - The SDP payloads SHALL not be encrypted.[TS24.229 6.1.1]
 - Only SDP payload SHALL be contained in SIP messages when the SDP payload
must be included in the message.[TS24.229 6.1.1]
 - A SDP offer and at least one media description SHALL be contained in an
INVITE request generated by a UE.[TS24.229 6.1.2]
 - The Session Description Protocol MUST be supported by all user agents as
a means to describe sessions.[RFC3261 13.2.1]
 - Whitespace MUST NOT be used on either side of the "=" sign. [RFC4566 5]
 - v,o,s,(c),t,m,(c) lines are REQUIRED in the SDP message.
(c line MUST include session level information or all of media information)
[RFC4566 5]
 - all MUST appear in exactly the following order:
"v,o,s,(i),(u),(e),(p),(c),(b),t,(r),(z),(k),(a),m,(i),(c),(b),(k),(a)"
(the line enclosed in "()" is OPTIONAL)[RFC4566 5]
- * o line
 - For both IP4 and IP6, the fully qualified domain name is the form that
SHOULD be given unless this is unavailable, in which case the globally
unique address MAY be substituted.[RFC4566 5.2]
- * s line
 - There MUST be one and only one "s=" field per session description.
[RFC4566 5.3]
 - The "s=" field MUST NOT be empty. [RFC4566 5.3]
 - If a session has no meaningful name, the value "s=" SHOULD be used.
[RFC4566 5.3]
- * c line
 - A session description MUST contain either at least one "c=" field in
each media description or a single "c=" field at the session level.
[RFC4566 5.7]
 - A session-level "c=" field MUST NOT specify Multiple addresses or
"c=" lines.[RFC4566 5.7]
- * b line
 - The proposed bandwidth for each media stream utilizing the ""b=""

media descriptor and the ""AS"" bandwidth modifier in the SDP SHALL be specified for ""video"" and ""audio"" media types that utilize the RTP/RTCP.[TS24.229 6.1.1]

- Security Association behavior

- All the subsequent SIP requests sent by the client to that server SHOULD make use of the security mechanism initiated in the previous step.[RFC3329 2.3.1]

3.10 generic_180-INVITE

Generic judgement items for 180-INVITE response.

See generic_sip_message

- The empty line MUST be present even if the message-body is not. [RFC3261 7]

- Header fields:

- * Call-ID

- The Call-ID header field of the response MUST equal the Call-ID header field of the request.[RFC3261 8.2.6.2]

- * Content-length

- If no body is present in a message, then the Content-Length header field value MUST be set to zero.[RFC3261 20.14]

- * CSeq

- The CSeq header field of the response MUST equal the CSeq field of the request.[RFC3261 8.2.6.2]

- * From

- The From field of the response MUST equal the From header field of the request.[RFC3261 8.2.6.2]

- * P-Called-Party-ID

- A UAC MUST NOT insert a P-Called-Party-ID header field in any SIP request or response.[RFC3455 4.2.2.1]

- * To

- If the To header field in the request did not contain a tag, the URI in the To header field in the response MUST equal the URI in

the To header field. [RFC3261 8.2.6.2]

- If the To header field in the request did not contain a tag, the UAS MUST add a tag to the To header field in the response. [RFC3261 8.2.6.2]

* Via

- The Via header field values in the response MUST equal the Via header field values in the request and MUST maintain the same ordering. [RFC3261 8.2.6.2][RFC3261 8.2.6.2]
- If the host portion of the "sent-by" parameter contains a domain name, or if it contains an IP address that differs from the packet source address, the server MUST add a "received" parameter to that Via header field value.[RFC3261 18.2.1]
- The "received" parameter MUST contain the source address from which the packet was received.[RFC3261 18.2.1]
- The response MUST be sent to the address in the "received" parameter, using the port indicated in the "sent-by" value, or using port 5060 if none is specified explicitly.[RFC3261 18.2.2]

3.11 generic_200-INVITE

Generic judgement items for 200-INVITE response.

See generic_sip_message

- Header fields:

- A 2xx response to an INVITE SHOULD contain the Allow header field and the Supported header field.[RFC3261 13.3.1.4]

* Allow

- A UA that supports INVITE MUST also support ACK, CANCEL and BYE. [RFC3261 13.1]

* Allow-Events

- Any node implementing one or more event packages SHOULD include an appropriate "Allow-Events" header indicating all supported events in all methods which initiate dialogs and their responses and OPTIONS responses.[RFC3265 3.3.7]

* Call-ID

- The Call-ID header field MUST be the same for all requests and responses sent by either UA in a dialog.[RFC3261 8.1.1.4]

-The Call-ID header field of the response MUST equal the Call-ID header field of the request.[RFC3261 8.2.6.2]

* Contact

- The protected server port SHALL be included in the address in the Contact header field if UE did not insert a GRUU.[TS24.229 5.1.2A.2]
- The UAS MUST add a Contact header field to the response.
[RFC3261 12.1.1]
- The URI provided in the Contact header field MUST be a SIP or SIPS URI.[RFC3261 12.1.1]
- Even if the "display-name" is empty, the "name-addr" form MUST be used if the "addr-spec" contains a comma, semicolon, or question mark.[RFC3261 20.10]

* Content-Encoding

- If the body has not undergone any encoding such as compression, then Content-Encoding MUST be omitted. [RFC3261 7.4.1]

* Content-Type

- The Internet media type of the message body MUST be given by the Content-Type header field.[RFC3261 7.4.1]
- The Content-Type header field MUST be present if the body is not empty.[RFC3261 20.15]

* CSeq

- The CSeq header field of the response MUST equal the CSeq field of the request.[RFC3261 8.2.6.2]

* From

- The From field of the response MUST equal the From header field of the request.[RFC3261 8.2.6.2]

* P-Called-Party-ID

- A UAC MUST NOT insert a P-Called-Party-ID header field in any SIP request or response.[RFC3455 4.2.2.1]

* Record-Route

- When a UAS responds to a request with a response that establishes a dialog, the UAS MUST copy all Record-Route header field values from the request into the response. [RFC3261 12.1.1][RFC3261 12.1.1]
- Record-Route header field values MUST maintain the order of Record-Route values from the request. [RFC3261 12.1.1][RFC3261 12.1.1]

* To

- If the To header field in the request did not contain a tag, the URI in the To header field in the response MUST equal the URI in the To header field. [RFC3261 8.2.6.2]
- If the To header field in the request did not contain a tag, the UAS MUST add a tag to the To header field in the response. [RFC3261 8.2.6.2]
- The same tag MUST be used for all responses to that request, both final and provisional. [RFC3261 8.2.6.2]

* Via

- The Via header field values in the response MUST equal the Via header field values in the request and MUST maintain the same ordering. [RFC3261 8.2.6.2][RFC3261 8.2.6.2]
- If the host portion of the "sent-by" parameter contains a domain name, or if it contains an IP address that differs from the packet source address, the server MUST add a "received" parameter to that Via header field value. [RFC3261 18.2.1]
- The "received" parameter MUST contain the source address from which the packet was received. [RFC3261 18.2.1]
- The response MUST be sent to the address in the "received" parameter, using the port indicated in the "sent-by" value, or using port 5060 if none is specified explicitly. [RFC3261 18.2.2]

- Bodies fields:

- The SDP payloads SHALL not be encrypted. [TS24.229 6.1.1]
- Only SDP payload SHALL be contained in SIP messages when the SDP payload must be included in the message. [TS24.229 6.1.1]
- The answer MUST be in a reliable non-failure message from UAS back to UAC which is correlated to that INVITE if the initial offer is in an INVITE. [RFC3261 13.2.1][RFC3261 13.3.1.4]
- The Session Description Protocol MUST be supported by all user agents as a means to describe sessions. [RFC3261 13.2.1]
- Whitespace MUST NOT be used on either side of the "=" sign. [RFC4566 5]
- v,o,s,(c),t,m,(c) lines are REQUIRED in the SDP message.
(c line MUST include session level information or all of media information) [RFC4566 5]
- all MUST appear in exactly the following order:
"v,o,s,(i),(u),(e),(p),(c),(b),(t),(r),(z),(k),(a),m,(i),(c),(b),(k),(a)"
(the line enclosed in "()" is OPTIONAL) [RFC4566 5]

* o line

-For both IP4 and IP6, the fully qualified domain name is the form that SHOULD be given unless this is unavailable, in which case the globally unique address MAY be substituted.[RFC4566 5.2]

* s line

- There MUST be one and only one "s=" field per session description. [RFC4566 5.3]
- The "s=" field MUST NOT be empty. [RFC4566 5.3]
- If a session has no meaningful name, the value "s= " SHOULD be used. [RFC4566 5.3]

* c line

- A session description MUST contain either at least one "c=" field in each media description or a single "c=" field at the session level. [RFC4566 5.7]
- A session-level "c=" field MUST NOT specify Multiple addresses or "c=" lines.[RFC4566 5.7]

* b line

- The proposed bandwidth for each media stream utilizing the ""b="" media descriptor and the ""AS"" bandwidth modifier in the SDP SHALL be specified for ""video"" and ""audio"" media types that utilize the RTP/RTCP.[TS24.229 6.1.1]

3.12 generic_ACK

Generic judgement items for ACK request.

See generic_sip_message

-The empty line MUST be present even if the message-body is not. [RFC3261 7]

- Request-Line:

- The Request-URI MUST NOT contain unescaped space control characters. [RFC3261 7.1]
- The Request-URI MUST NOT be enclosed in "<". [RFC3261 7.1]
- The UAC MUST place the remote target URI into the Request-URI if the route set is not empty and the first URI in the route set contains the lr parameter.[RFC3261 12.2.1.1]

- Header fields:

-SIP request MUST contain To, From, CSeq, Call-ID, Max-Forwards, and Via header fields. [RFC3261 8.1.1]

* Call-ID

- The Call-ID header field MUST be the same for all requests and responses sent by either UA in a dialog.[RFC3261 8.1.1.4]
- The Call-ID of the request MUST be set to the Call-ID of the dialog. [RFC3261 12.2.1.1]

* Content-length

- If no body is present in a message, then the Content-Length header field value MUST be set to zero.[RFC3261 20.14]

* CSeq

- The Cseq method MUST match the method of Request-Line in the request. [RFC3261 8.1.1.5][RFC3261 12.2.1.1]
- The sequence number value in the CSeq header field MUST be expressible as a 32-bit unsigned integer. [RFC3261 8.1.1.5][RFC3261 20.16]
- The sequence number value in the CSeq header field MUST be less than $2^{**}31$. [RFC3261 8.1.1.5]
- The sequence number of the CSeq header field MUST be the same as the INVITE being acknowledged.[RFC3261 13.2.2.4]
- The CSeq method MUST be ACK.[RFC3261 13.2.2.4]

* From

- The From URI of the request MUST be set to the local URI from the dialog state.[RFC3261 12.2.1.1]
- The tag in the From header field of the request MUST be set to the local tag of the dialog ID.[RFC3261 12.2.1.1]

* Max-Forwards

- A UAC MUST insert a Max-Forwards header field into each request it originates.[RFC3261 8.1.1.6]
- The Max-Forwards header field value SHOULD be 70.[RFC3261 8.1.1.6]

* P-Called-Party-ID

- A UAC MUST NOT insert a P-Called-Party-ID header field in any SIP request or response.[RFC3455 4.2.2.1]

* Route

- If the request contains a Route header field, the request SHOULD be sent to the locations derived from its topmost value.[RFC3261 8.1.2]
- The UAC MUST include a Route header field containing the route set

values in order including all parameters if the route set is not empty, and the first URI in the route set contains the lr parameter.
[RFC3261 12.2.1.1]

* To

- The URI in the To field of the request MUST be set to the remote URI from the dialog state.[RFC3261 12.2.1.1]
- The tag in the To header field of the request MUST be set to the remote tag of the dialog ID.[RFC3261 12.2.1.1]

* Via

- The protected server port SHALL be included in the Via header entry relating to the UE.[TS24.229 5.1.2A.1]
- A UAC MUST insert a Via into that request. [RFC3261 8.1.1.7]
- The protocol name and protocol version in the Via header field MUST be SIP and 2.0. [RFC3261 8.1.1.7]
- The Via header field value MUST contain a branch parameter.
[RFC3261 8.1.1.7]
- The branch ID MUST always begin with the characters "z9hG4bK".
[RFC3261 8.1.1.7]
- The client transport MUST insert a value of the "sent-by" field into the Via header field.[RFC3261 18.1.1]

3.13 generic_BYE

Generic judgement items for BYE request.

See generic_sip_message

- The empty line MUST be present even if the message-body is not. [RFC3261 7]
- Request-Line:
 - The Request-URI MUST NOT contain unescaped space control characters.
[RFC3261 7.1]
 - The Request-URI MUST NOT be enclosed in "<>". [RFC3261 7.1]
 - The UAC MUST place the remote target URI into the Request-URI if the route set is not empty and the first URI in the route set contains the lr parameter.[RFC3261 12.2.1.1]
- Header fields:
 - SIP request MUST contain To, From, CSeq, Call-ID, Max-Forwards, and Via

header fields. [RFC3261 8.1.1]

-These requests **MUST** also have both a Require and Proxy-Require header fields with the value "sec-agree".[RFC3329 2.3.1]

* Call-ID

-The Call-ID header field **MUST** be the same for all requests and responses sent by either UA in a dialog.[RFC3261 8.1.1.4]

-The Call-ID of the request **MUST** be set to the Call-ID of the dialog.[RFC3261 12.2.1.1]

* Content-length

-If no body is present in a message, then the Content-Length header field value **MUST** be set to zero.[RFC3261 20.14]

* CSeq

-The Cseq method **MUST** match the method of Request-Line in the request.[RFC3261 8.1.1.5][RFC3261 12.2.1.1]

-The sequence number value in the CSeq header field **MUST** be expressible as a 32-bit unsigned integer.
[RFC3261 8.1.1.5][RFC3261 20.16]

-The sequence number value in the CSeq header field **MUST** be less than $2^{*}31$. [RFC3261 8.1.1.5]

-Requests within a dialog **MUST** contain strictly monotonically increasing and contiguous CSeq sequence numbers in each direction.
[RFC3261 12.2.1.1]

-The value of the local sequence number **MUST** be incremented by one if the local sequence number is not empty.[RFC3261 12.2.1.1]

-The value of the local sequence number that be incremented by one **MUST** be placed into the CSeq header field if the local sequence number is not empty.[RFC3261 12.2.1.1]

* From

-The From URI of the request **MUST** be set to the local URI from the dialog state.[RFC3261 12.2.1.1]

-The tag in the From header field of the request **MUST** be set to the local tag of the dialog ID.[RFC3261 12.2.1.1]

* Max-Forwards

-A UAC **MUST** insert a Max-Forwards header field into each request it originates. [RFC3261 8.1.1.6]

-The Max-Forwards header field value **SHOULD** be 70.[RFC3261 8.1.1.6]

* P-Called-Party-ID

-A UAC MUST NOT insert a P-Called-Party-ID header field in any SIP request or response.[RFC3455 4.2.2.1]

* Route

- If the request contains a Route header field, the request SHOULD be sent to the locations derived from its topmost value.[RFC3261 8.1.2]
- The UAC MUST include a Route header field containing the route set values in order including all parameters if the route set is not empty, and the first URI in the route set contains the lr parameter. [RFC3261 12.2.1.1]

* Proxy-Require

- A UAC MUST insert a Proxy-Require header field into the request listing the option tag for that extension. [RFC3261 8.1.1.9]

* Security-Verify

- A subsequent SIP requests MUST contain a Security-Verify header field that mirrors the server's list received previously in the Security-Server header field.[RFC3329 2.3.1]

* To

- The URI in the To field of the request MUST be set to the remote URI from the dialog state.[RFC3261 12.2.1.1]
- The tag in the To header field of the request MUST be set to the remote tag of the dialog ID.[RFC3261 12.2.1.1]

* Via

- The protected server port SHALL be included in the Via header entry relating to the UE.[TS24.229 5.1.2A.1]
- A UAC MUST insert a Via into that request. [RFC3261 8.1.1.7]
- The protocol name and protocol version in the Via header field MUST be SIP and 2.0. [RFC3261 8.1.1.7]
- The Via header field value MUST contain a branch parameter. [RFC3261 8.1.1.7]
- The branch ID MUST always begin with the characters "z9hG4bK". [RFC3261 8.1.1.7]
- The client transport MUST insert a value of the "sent-by" field into the Via header field.[RFC3261 18.1.1]

- Security Association behavior

- All the subsequent SIP requests sent by the client to that server SHOULD make use of the security mechanism initiated in the previous

step.[RFC3329 2.3.1]

3.14 generic_200-BYE

Generic judgement items for 200-BYE response.

See generic_sip_message

- The empty line **MUST** be present even if the message-body is not. [RFC3261 7]
- TUs **SHOULD** respond immediately to non-INVITE requests.[RFC3261 17.1]

- Header fields:

* Call-ID

- The Call-ID header field **MUST** be the same for all requests and responses sent by either UA in a dialog.[RFC3261 8.1.1.4]
- The Call-ID header field of the response **MUST** equal the Call-ID header field of the request.[RFC3261 8.2.6.2]

* Content-length

- If no body is present in a message, then the Content-Length header field value **MUST** be set to zero.[RFC3261 20.14]

* CSeq

- The CSeq header field of the response **MUST** equal the CSeq field of the request.[RFC3261 8.2.6.2]

* From

- The From field of the response **MUST** equal the From header field of the request.[RFC3261 8.2.6.2]

* P-Called-Party-ID

- A UAC **MUST NOT** insert a P-Called-Party-ID header field in any SIP request or response.[RFC3455 4.2.2.1]

* To

- If a request contained a To tag in the request, the To header field in the response **MUST** equal that of the request.[RFC3261 8.2.6.2]
- The same tag **MUST** be used for all responses to that request, both final and provisional. [RFC3261 8.2.6.2]

* Via

- The Via header field values in the response **MUST** equal the Via header

field values in the request and MUST maintain the same ordering.

[RFC3261 8.2.6.2][RFC3261 8.2.6.2]

- If the host portion of the "sent-by" parameter contains a domain name, or if it contains an IP address that differs from the packet source address, the server MUST add a "received" parameter to that Via header field value.[RFC3261 18.2.1]
- The "received" parameter MUST contain the source address from which the packet was received.[RFC3261 18.2.1]
- The response MUST be sent to the address in the "received" parameter, using the port indicated in the "sent-by" value, or using port 5060 if none is specified explicitly.[RFC3261 18.2.2]

3.15 generic_CANCEL

Generic judgement items for CANCEL request.

See generic_sip_message

- The empty line MUST be present even if the message-body is not.
[RFC3261 7]
- The Request-URI, Call-ID, To, the numeric part of CSeq, and From header fields in the CANCEL request MUST be identical to those in the request being cancelled, including tags.[RFC3261 9.1]
- The destination address, port, and transport for the CANCEL MUST be identical to those used to send the original request.[RFC3261 9.1]
- Request-Line:
 - The Request-URI MUST NOT contain unescaped space control characters.
[RFC3261 7.1]
 - The Request-URI MUST NOT be enclosed in "<>". [RFC3261 7.1]
- Header fields:
 - SIP request MUST contain To, From, CSeq, Call-ID, Max-Forwards, and Via header fields. [RFC3261 8.1.1]
 - Require and Proxy-Require MUST NOT be used in a SIP CANCEL request, or in an ACK request sent for a non-2xx response.
[RFC3261 8.2.2.3][RFC3261 9.1]
- * Content-length
 - If no body is present in a message, then the Content-Length header field value MUST be set to zero.[RFC3261 20.14]

* CSeq

- The sequence number value in the CSeq header field MUST be expressible as a 32-bit unsigned integer. [RFC3261 8.1.1.5][RFC3261 20.16]
- The sequence number value in the CSeq header field MUST be less than 2^{31} . [RFC3261 8.1.1.5]
- The CSeq method MUST have a value of CANCEL. [RFC3261 9.1]

* Max-Forwards

- A UAC MUST insert a Max-Forwards header field into each request it originates. [RFC3261 8.1.1.6]
- The Max-Forwards header field value SHOULD be 70.[RFC3261 8.1.1.6]

* P-Called-Party-ID

- A UAC MUST NOT insert a P-Called-Party-ID header field in any SIP request or response.[RFC3455 4.2.2.1]

* Route

- If the request being cancelled contains a Route header field, the CANCEL request MUST include that Route header field's values. [RFC3261 9.1]

* Via

- The protected server port SHALL be included in the Via header entry relating to the UE.[TS24.229 5.1.2A.1]
- A UAC MUST insert a Via into that request. [RFC3261 8.1.1.7]
- The protocol name and protocol version in the Via header field MUST be SIP and 2.0. [RFC3261 8.1.1.7]
- The Via header field value MUST contain a branch parameter. [RFC3261 8.1.1.7]
- The branch ID MUST always begin with the characters "z9hG4bK". [RFC3261 8.1.1.7]
- A CANCEL constructed by a client MUST have only a single Via header field value matching the top Via value in the request being cancelled. [RFC3261 9.1]

3.16 generic_200-CANCEL

Generic judgement items for 200-CANCEL response.

See generic_sip_message

- The empty line MUST be present even if the message-body is not. [RFC3261 7]

-TUs SHOULD respond immediately to non-INVITE requests.[RFC3261 17.1]

- Header fields:

* Call-ID

-The Call-ID header field of the response MUST equal the Call-ID header field of the request.[RFC3261 8.2.6.2]

* Content-length

-If no body is present in a message, then the Content-Length header field value MUST be set to zero.[RFC3261 20.14]

* CSeq

-The CSeq header field of the response MUST equal the CSeq field of the request.[RFC3261 8.2.6.2]

* From

-The From field of the response MUST equal the From header field of the request.[RFC3261 8.2.6.2]

* P-Called-Party-ID

-A UAC MUST NOT insert a P-Called-Party-ID header field in any SIP request or response.[RFC3455 4.2.2.1]

* To

-If the To header field in the request did not contain a tag, the URI in the To header field in the response MUST equal the URI in the To header field. [RFC3261 8.2.6.2]

-If the To header field in the request did not contain a tag, the UAS MUST add a tag to the To header field in the response. [RFC3261 8.2.6.2]

* Via

-The Via header field values in the response MUST equal the Via header field values in the request and MUST maintain the same ordering. [RFC3261 8.2.6.2][RFC3261 8.2.6.2]

-If the host portion of the "sent-by" parameter contains a domain name, or if it contains an IP address that differs from the packet source address, the server MUST add a "received" parameter to that Via header field value.[RFC3261 18.2.1]

-The "received" parameter MUST contain the source address from which the packet was received.[RFC3261 18.2.1]

-The response MUST be sent to the address in the "received" parameter;

using the port indicated in the "sent-by" value, or using port 5060 if none is specified explicitly.[RFC3261 18.2.2]

3.17 generic_3XX-6XX

Generic judgement items for 3XX-6XX response.

See generic_sip_message

- The empty line **MUST** be present even if the message-body is not.
[RFC3261 7]

- Header fields:

- * Call-ID

- The Call-ID header field of the response **MUST** equal the Call-ID header field of the request.[RFC3261 8.2.6.2]

- * Content-length

- If no body is present in a message, then the Content-Length header field value **MUST** be set to zero.[RFC3261 20.14]

- * CSeq

- The CSeq header field of the response **MUST** equal the CSeq field of the request.[RFC3261 8.2.6.2]

- * From

- The From field of the response **MUST** equal the From header field of the request.[RFC3261 8.2.6.2]

- * P-Called-Party-ID

- A UAC **MUST NOT** insert a P-Called-Party-ID header field in any SIP request or response.[RFC3455 4.2.2.1]

- * To

- If a request contained a To tag in the request, the To header field in the response **MUST** equal that of the request.[RFC3261 8.2.6.2]
 - If the To header field in the request did not contain a tag, the URI in the To header field in the response **MUST** equal the URI in the To header field. [RFC3261 8.2.6.2]
 - If the To header field in the request did not contain a tag, the UAS **MUST** add a tag to the To header field in the response.
[RFC3261 8.2.6.2]

- The same tag **MUST** be used for all responses to that request, both final and provisional. [RFC3261 8.2.6.2]

* Via

- The Via header field values in the response **MUST** equal the Via header field values in the request and **MUST** maintain the same ordering. [RFC3261 8.2.6.2][RFC3261 8.2.6.2]
- If the host portion of the "sent-by" parameter contains a domain name, or if it contains an IP address that differs from the packet source address, the server **MUST** add a "received" parameter to that Via header field value.[RFC3261 18.2.1]
- The "received" parameter **MUST** contain the source address from which the packet was received.[RFC3261 18.2.1]
- The response **MUST** be sent to the address in the "received" parameter, using the port indicated in the "sent-by" value, or using port 5060 if none is specified explicitly.[RFC3261 18.2.2]

3.18 generic_non2XX-ACK

Generic judgement items for ACK-non2XX request.

See generic_sip_message

- The empty line **MUST** be present even if the message-body is not. [RFC3261 7]
- The ACK **MUST** be sent to the same address, port, and transport to which the original request was sent.[RFC3261 17.1.1.2]
- The ACK request constructed by the client transaction **MUST** contain values for the Call-ID, From, and Request-URI that are equal to the values of those header fields in the request passed to the transport by the client transaction. [RFC3261 17.1.1.3]
- Request-Line:
 - The Request-URI **MUST NOT** contain unescaped space control characters. [RFC3261 7.1]
 - The Request-URI **MUST NOT** be enclosed in "<>". [RFC3261 7.1]
- Header fields:
 - SIP request **MUST** contain To, From, CSeq, Call-ID, Max-Forwards, and Via header fields. [RFC3261 8.1.1]
 - Require and Proxy-Require **MUST NOT** be used in a SIP CANCEL request,

or in an ACK request sent for a non-2xx response. [RFC3261 8.2.2.3]

* Content-length

-If no body is present in a message, then the Content-Length header field value MUST be set to zero.[RFC3261 20.14]

* CSeq

- The Cseq method MUST match the method of Request-Line in the request. [RFC3261 8.1.1.5]
- The sequence number value in the CSeq header field MUST be expressible as a 32-bit unsigned integer. [RFC3261 8.1.1.5][RFC3261 20.16]
- The sequence number value in the CSeq header field MUST be less than 2^{31} . [RFC3261 8.1.1.5]
- The CSeq header field in the ACK MUST contain the same value for the sequence number as was present in the original request. [RFC3261 17.1.1.3]
- The method parameter MUST be equal to "ACK".[RFC3261 17.1.1.3]

* Max-Forwards

- A UAC MUST insert a Max-Forwards header field into each request it originates.[RFC3261 8.1.1.6]
- The Max-Forwards header field value SHOULD be 70.[RFC3261 8.1.1.6]

* P-Called-Party-ID

- A UAC MUST NOT insert a P-Called-Party-ID header field in any SIP request or response.[RFC3455 4.2.2.1]

* Route

- The Route header fields MUST appear in the ACK if the INVITE request whose response is being acknowledged had Route header fields. [RFC3261 17.1.1.3]

* To

- The To header field in the ACK MUST equal the To header field in the response being acknowledged.[RFC3261 17.1.1.3]

* Via

- The protected server port SHALL be included in the Via header entry relating to the UE.[TS24.229 5.1.2A.1]
- A UAC MUST insert a Via into that request. [RFC3261 8.1.1.7]
- The protocol name and protocol version in the Via header field MUST be SIP and 2.0. [RFC3261 8.1.1.7]
- The Via header field value MUST contain a branch parameter.

[RFC3261 8.1.1.7]

- The branch ID MUST always begin with the characters "z9hG4bK".

[RFC3261 8.1.1.7]

- The ACK MUST contain a single Via header field.[RFC3261 17.1.1.3]

- The single Via header field MUST be equal to the top Via header field of the original request.[RFC3261 17.1.1.3]

3.19 generic_OPTIONS

Generic judgement items for OPTIONS request.

See generic_sip_message

- The empty line MUST be present even if the message-body is not. [RFC3261 7]

- Request-Line:

- The Request-URI MUST NOT contain unescaped space control characters. [RFC3261 7.1]

- The Request-URI MUST NOT be enclosed in "<>". [RFC3261 7.1]

- The initial Request-URI of the message SHOULD be set to the value of the URI in the To field.[RFC3261 8.1.1.1]

- Header fields:

- SIP request MUST contain To, From, CSeq, Call-ID, Max-Forwards, and Via header fields. [RFC3261 8.1.1]

- These requests MUST also have both a Require and Proxy-Require header fields with the value "sec-agree".[RFC3329 2.3.1]

- * Accept

- An Accept header field SHOULD be included to indicate the type of message body the UAC wishes to receive in the response. [RFC3261 11.1]

- * Content-length

- If no body is present in a message, then the Content-Length header field value MUST be set to zero.[RFC3261 20.14]

- * CSeq

- The Cseq method MUST match the method of Request-Line in the request. [RFC3261 8.1.1.5]

- The sequence number value in the CSeq header field MUST be expressible

as a 32-bit unsigned integer. [RFC3261 8.1.1.5][RFC3261 20.16]

-The sequence number value in the CSeq header field MUST be less than 2^{31} . [RFC3261 8.1.1.5]

* From

-The From field MUST contain a new "tag" parameter, chosen by the UAC. [RFC3261 8.1.1.3]

* Max-Forwards

-A UAC MUST insert a Max-Forwards header field into each request it originates. [RFC3261 8.1.1.6]

-The Max-Forwards header field value SHOULD be 70. [RFC3261 8.1.1.6]

* P-Called-Party-ID

-A UAC MUST NOT insert a P-Called-Party-ID header field in any SIP request or response. [RFC3455 4.2.2.1]

* P-Preferred-Identity

-The P-Preferred-Identity header field SHALL be used as the public user identity for the request if a P-Preferred-Identity was included. [TS24.229 5.1.2A.1]

-The default public user identity for the security association SHALL be used as the public user identity for the request if no P-Preferred-Identity was included. [TS24.229 5.1.2A.1]

* Proxy-Require

-A UAC MUST insert a Proxy-Require header field into the request listing the option tag for that extension. [RFC3261 8.1.1.9]

* Route

-A proper preloaded Route header value SHALL be built in Route header for all new dialog and standalone transactions. [TS24.229 5.1.2A.1]

-A list of Route header values made out of the P-CSCF URI and the values received in the Service-Route header saved from the 200 (OK) response to the last registration SHALL be built in Route header. [TS24.229 5.1.2A.1]

-If the request contains a Route header field, the request SHOULD be sent to the locations derived from its topmost value. [RFC3261 8.1.2]

* Security-Verify

-A subsequent SIP requests MUST contain a Security-Verify header field that mirrors the server's list received previously in the Security-Server header field. [RFC3329 2.3.1]

* To

- A request outside of a dialog MUST NOT contain a To tag.
[RFC3261 8.1.1.2]

* Via

- The protected server port SHALL be included in the Via header entry relating to the UE.[TS24.229 5.1.2A.1]
- A UAC MUST insert a Via into that request. [RFC3261 8.1.1.7]
- The protocol name and protocol version in the Via header field MUST be SIP and 2.0. [RFC3261 8.1.1.7]
- The Via header field value MUST contain a branch parameter.
[RFC3261 8.1.1.7]
- The branch ID MUST always begin with the characters "z9hG4bK".
[RFC3261 8.1.1.7]
- The client transport MUST insert a value of the "sent-by" field into the Via header field.[RFC3261 18.1.1]

- Security Association behavior

- All the subsequent SIP requests sent by the client to that server SHOULD make use of the security mechanism initiated in the previous step.[RFC3329 2.3.1]

3.20 generic_200-OPTIONS

Generic judgement items for 200-OPTIONS response.

See generic_sip_message

- TUs SHOULD respond immediately to non-INVITE requests.[RFC3261 17.1]

- Header fields:

- Allow, Accept, Accept-Encoding, Accept-Language, and Supported header fields SHOULD be present in a 200 (OK) response to an OPTIONS request.
[RFC3261 11.2]

* Allow

- All UAs MUST support the OPTIONS method.[RFC3261 11]
- A UA that supports INVITE MUST also support ACK, CANCEL and BYE.
[RFC3261 13.1]

* Allow-Events

-Any node implementing one or more event packages SHOULD include an appropriate "Allow-Events" header indicating all supported events in all methods which initiate dialogs and their responses and OPTIONS responses.[RFC3265 3.3.7]

* Call-ID

-The Call-ID header field of the response MUST equal the Call-ID header field of the request.[RFC3261 8.2.6.2]

* Content-Encoding

-If the body has not undergone any encoding such as compression, then Content-Encoding MUST be omitted. [RFC3261 7.4.1]

* Content-Type

-The Internet media type of the message body MUST be given by the Content-Type header field.[RFC3261 7.4.1]
-The Content-Type header field MUST be present if the body is not empty.[RFC3261 20.15]

* CSeq

-The CSeq header field of the response MUST equal the CSeq field of the request.[RFC3261 8.2.6.2]

* From

-The From field of the response MUST equal the From header field of the request.[RFC3261 8.2.6.2]

* P-Called-Party-ID

-A UAC MUST NOT insert a P-Called-Party-ID header field in any SIP request or response.[RFC3455 4.2.2.1]

* To

-If the To header field in the request did not contain a tag, the URI in the To header field in the response MUST equal the URI in the To header field.[RFC3261 8.2.6.2]
-If the To header field in the request did not contain a tag, the UAS MUST add a tag to the To header field in the response. [RFC3261 8.2.6.2]

* Via

-The Via header field values in the response MUST equal the Via header field values in the request and MUST maintain the same

ordering.[RFC3261 8.2.6.2][RFC3261 8.2.6.2]

- If the host portion of the "sent-by" parameter contains a domain name, or if it contains an IP address that differs from the packet source address, the server MUST add a "received" parameter to that Via header field value.[RFC3261 18.2.1]
- The "received" parameter MUST contain the source address from which the packet was received.[RFC3261 18.2.1]
- The response MUST be sent to the address in the "received" parameter, using the port indicated in the "sent-by" value, or using port 5060 if none is specified explicitly.[RFC3261 18.2.2]

- Bodies fields:

- The SDP payloads SHALL not be encrypted.[TS24.229 6.1.1]
- Only SDP payload SHALL be contained in SIP messages when the SDP payload must be included in the message.[TS24.229 6.1.1]
- If the types include one that can describe media capabilities, the UAS SHOULD include a body in the response for that purpose. [RFC3261 11.2]
- The Session Description Protocol MUST be supported by all user agents as a means to describe sessions.[RFC3261 13.2.1]
- Whitespace MUST NOT be used on either side of the "=" sign. [RFC4566 5]
- v,o,s,(c),(t),(m),(c) lines are REQUIRED in the SDP message.
(c line MUST include session level information or all of media information)
[RFC4566 5]
- all MUST appear in exactly the following order:
"v,o,s,(i),(u),(e),(p),(c),(b),(t),(r),(z),(k),(a),m,(i),(c),(b),(k),(a)"
(the line enclosed in "()" is OPTIONAL)[RFC4566 5]

* o line

- For both IP4 and IP6, the fully qualified domain name is the form that SHOULD be given unless this is unavailable, in which case the globally unique address MAY be substituted.[RFC4566 5.2]

* s line

- There MUST be one and only one "s=" field per session description.
[RFC4566 5.3]
- The "s=" field MUST NOT be empty. [RFC4566 5.3]
- If a session has no meaningful name, the value "s=" SHOULD be used.
[RFC4566 5.3]

* c line

- A session description MUST contain either at least one "c=" field in each media description or a single "c=" field at the session level.

[RFC4566 5.7]

-A session-level "c=" field MUST NOT specify Multiple addresses or "c=" lines.[RFC4566 5.7]

* b line

-The proposed bandwidth for each media stream utilizing the ""b="" media descriptor and the ""AS"" bandwidth modifier in the SDP SHALL be specified for ""video"" and ""audio"" media types that utilize the RTP/RTCP.[TS24.229 6.1.1]

4. Test Profile: User Equipment operation

4.1 Registration

4.1.1 UE-RG-B-1 - Initial registration and subscription for the registration state event package (SIP default port values)

[NAME]

UE-RG-B-1 - Initial registration and subscription for the registration state event package (SIP default port values)

[TARGET]

IMS User Equipment (NUT)

[PURPOSE]

- (1) To verify that the UEa1 properly sends the initial REGISTER request to the SIP default port values and registers its public user identity when the UEa1 does not receive any specific port information during the P-CSCF discovery procedure.
- (2) To verify that the UEa1 properly subscribes to the reg event package for the public user identity registered at the user's registrar and performs upon receipt of a NOTIFY request on the dialog which was generated during subscription to the reg event package.

4.1.2 UE-RG-B-2 - User-initiated reregistration

[NAME]

UE-RG-B-2 - User-initiated reregistration

[TARGET]

IMS User Equipment (NUT)

[PURPOSE]

- (1) To verify that the UEa1 properly reregisters an already registered public user without a challenge response when half of the time has expired when the previous registration was for 1200 seconds or less.
- (2) To verify that the UEa1 properly protects the REGISTER request using a security association, established as a result of an earlier registration.

[REFERENCE]

*1: 10 NOTIFY 200 OK from NUT to P-CSCF

See generic_200-NOTIFY

*2: 11 REGISTER for reregistration from NUT to P-CSCF

See generic_re_REGISTER

The UE SHALL use the expiry attribute within the <contact> sub-element that the UE registered to adjust the expiration time for that public user identity.

[TS24.229 5.1.1.5.2]

*3: 13 REGISTER for authentication

See generic_Auth_REGISTER

4.1.4 UE-RG-B-4 - User-initiated reregistration

[NAME]

UE-RG-B-4 - User-initiated deregistration

[TARGET]

IMS User Equipment (NUT)

[PURPOSE]

- (1) To verify that the UEa1 properly deregisters a public user identity that it has previously registered with its contact address and deletes the security associations.
- (2) To verify that the UEa1 properly protects the REGISTER request using a security association established as a result of an earlier registration.
- (3) To verify that the UEa1 properly considers subscription to the reg event package cancelled.
(i.e. as if the UE had sent a SUBSCRIBE request with an Expires header containing a value of zero).

[OBSERVABLE RESULTS]

*1: 9 REGISTER for deregistration from NUT to P-CSCF

See generic_de_REGISETER

*2: 12 No response or ICMP error

- Security behavior:

All registration details relating to the public user identity SHALL be removed when UE received the 200 (OK) response to the REGISTER request.
[TS24.229 5.1.1.6]

The security associations SHALL be deleted by UE if there are no more public user identities registered.[TS24.229 5.1.1.6]

*3: 14 No response or any responses except 200 OK

- Security behavior:

The subscription to the reg event package SHALL be considered cancelled if all public user identities are deregistered and the security association is removed.[TS24.229 5.1.1.6]

4.1.5 UE-RG-B-5 - Network-initiated deregistration with rejected event

[NAME]

UE-RG-B-5 - Network-initiated deregistration with rejected event

[TARGET]

IMS User Equipment (NUT)

[PURPOSE]

(1) To verify that the UEa1 properly receives a NOTIFY request carrying information related to the reg event package, and answers to a network-initiated deregistration event on the dialog.

(2) To verify that the UEa1 properly deletes the security associations towards the P-CSCF after the server transaction pertaining to the received NOTIFY request terminates.

23. < No response or ICMP error >

[OBSERVABLE RESULTS]

*1: 19 ACK with SA2 from NUT to P-CSCF

See generic_ACK

- Security behavior:

The newly established set of security associations SHALL be used for further messages sent towards the P-CSCF as appropriate.[TS24.229 5.1.1.5.1]

The previous security associations SHALL be replaced the new security associations.[TS33.203 7.4]

The sever ports of UE and P-CSCF SHALL not be changed, while the protected client ports of UE and P-CSCF SHALL change.[TS33.203 7.4]

*2: 20 BYE with SA2 from NUT to P-CSCF

See generic_BYE

- Security behavior:

The newly established set of security associations SHALL be used for further messages sent towards the P-CSCF as appropriate.[TS24.229 5.1.1.5.1]

*3: 23 No response or ICMP error

- Security behavior:

The newly established set of security associations SHALL be used for further messages sent towards the P-CSCF as appropriate.[TS24.229 5.1.1.5.1]

The old set of security associations SHALL be deleted after all SIP transactions that use the old set of security associations are completed.
[TS24.229 5.1.1.5.1]

4.1.18 UE-RG-B-18 - Invalid authentication parameter (MAC) and 403 response

[NAME]

UE-RG-B-18 - Invalid authentication parameter (MAC) and 403 response

[TARGET]

IMS User Equipment (NUT)

[PURPOSE]

- (1) To verify that the UEa1 properly responds with a further REGISTER indicating to the S-CSCF that the challenge has been deemed invalid
- (2) To verify that the UEa1 properly considers the registration to have failed and deletes the temporary set of security associations it was trying to establish when a 403 (Forbidden) response is received.
- (3) To verify that the UEa1 properly resends a new REGISTER with the old set of security associations.
- (4) To verify that the UEa1 properly sends an unprotected REGISTER message when the old set of security associations are no longer active at the P-CSCF.

[OBSERVABLE RESULTS]

*1: 13 REGISTER for authentication with SA1 from NUT to P-CSCF

See generic_Re_REGISTER

- Exception{

* Authorization

The response directive in Authorization header field SHALL be set
to the last calculated response value.[TS24.229 5.1.1.4]

}

The REGISTRER request for authentication that includes the cause of failure
SHALL be sent towards the Home Network.[TS33.203 6.1.2.2]

The client SHOULD NOT retry the same request without modification.
[RFC3261 21.4]

- Security behavior:

The REGISTER request SHALL be sent using an existing set of security
associations.[TS24.229 5.1.1.5.3]

A temporary set of security associations SHALL not be created.
[TS24.229 5.1.1.5.3]

The REGISTER request which may pass through an already established SA and indicate a network authentication failure SHALL be sent to the P-CSCF.

[TS33.203 7.3.1.2]

- Header field:

This new request SHOULD have the same value of the Call-ID, To, and From of the previous request, but the CSeq should contain a new sequence number that is one higher than the previous. [RFC3261 8.1.3.5]

* Authorization

No AUTS directive and an empty response directive SHALL be contained in the subsequent REGISTER request.[TS24.229 5.1.1.5.3]

* Security-Client

Security-Client header field SHALL be set to the security mechanism it supports, the IPsec layer algorithms for integrity and confidentiality protection it supports and the new parameter values needed for the setup of two new pairs of security associations.[TS24.229 5.1.1.5.3]

*2: 15 REGISTER with SA1 from NUT to P-CSCF

See generic_REGISTER

The registration SHALL be considered to have failed if 403 (Forbidden) response is received.[TS24.229 5.1.1.5.1]

The temporary set of security associations SHALL be deleted and the old set of security associations SHALL be used.[TS24.229 5.1.1.5.1]

The client SHOULD NOT retry the same request without modification.
[RFC3261 21.4]

*3: 17 REGISTER with no SAs from NUT to P-CSCF

See generic_REGISTER

- Security behavior:

An unprotected REGISTER request SHOULD be sent when the security associations no longer active at the P-CSCF.[TS33.203 7.4.1a]

*4: 19 REGISTER for authentication with temporary SA3 from NUT to P-CSCF

See generic_Auth_REGISTER

*5: 21 SUBSCRIBE with SA2 from NUT to P-CSCF

*6: 24 NOTIFY 200 OK with SA2 from NUT to P-CSCF

See generic_200-NOTIFY

4.1.19 UE-RG-B-19 - Invalid authentication parameter(SQN)

[NAME]

UE-RG-B-19 - Invalid authentication parameter (SQN)

[TARGET]

IMS User Equipment (NUT)

[PURPOSE]

To verify that the UEa1 properly responds with a further REGISTER indicating to the S-CSCF that the challenge has been deemed invalid and only responds to two consecutive invalid challenges and does not automatically attempt authentication after two consecutive failed attempts to authenticate.

[REFERENCE]

17. <No more REGISTER request>

[OBSERVABLE RESULTS]

*1: 13 REGISTER for authentication from NUT to P-CSCF

See generic_Re_REGISTER

- Exception{

* Authorization

The response directive in Authorization header field SHALL be set to the last calculated response value.[TS24.229 5.1.1.4]

}

The REGISTER request for authentication that includes the cause of failure SHALL be sent towards the Home Network.[TS33.203 6.1.2.2]

The client SHOULD NOT retry the same request without modification.
[RFC3261 21.4]

- Security behavior:

The REGISTER request SHALL be sent using an existing set of security associations.[TS24.229 5.1.1.5.3]

A temporary set of security associations SHALL not be created.
[TS24.229 5.1.1.5.3]

The REGISTER request which may pass through an already established SA and indicate a network authentication failure SHALL be sent to the P-CSCF.
[TS33.203 7.3.1.2]

- Header field:

This new request SHOULD have the same value of the Call-ID, To, and From of the previous request, but the CSeq should contain a new sequence number that is one higher than the previous. [RFC3261 8.1.3.5]

* Authorization

The AUTS directive SHALL be contained in the subsequent REGISTER request.[TS24.229 5.1.1.5.3]

The client MUST calculate its credentials using an empty password.
[RFC3310 3.4]

* Security-Client

Security-Client header field SHALL be set to the security mechanism it supports, the IPsec layer algorithms for integrity and confidentiality protection it supports and the new parameter values needed for the setup of two new pairs of security associations.[TS24.229 5.1.1.5.3]

*2: 15 REGISTER for authentication from NUT to P-CSCF

See generic_Re_REGISTER

8. 200 OK NUT -> P-CSCF

SIP/2.0 200 OK
Via: SIP/2.0/UDP p.a1.under.test.com:10001;branch=z9hG4bK240f34.1;received=3ffe:501:ffff:100::10,SIP/2.0/UDP s.a1.under.test.com;branch=z9hG4bK332b23.1;received=3ffe:501:ffff:100::30
From: <sip:UEa1_public_1@under.test.com>;tag=151170
To: <sip:UEa1_public_1@under.test.com>;tag=31415
Call-ID: b89rjhnedlrfflsj40a222@under.test.com
CSeq: 1 NOTIFY
Content-Length: 0

[OBSERVABLE RESULTS]

*1: 1 REGISTER from NUT to P-CSCF

See generic_REGISTER

*2: 3 REGISTER for authentication from NUT to P-CSCF

See generic_Auth_REGISTER

- Security behavior:

ESP confidentiality SHALL be used in transport mode between UE and P-CSCF.[TS33.203 6.2]

ESP integrity SHALL be used in transport mode between UE and P-CSCF. [TS33.203 6.3]

The integrity and confidentiality of the REGISTER request for authentication and all following SIP messages SHALL be protected. [TS33.203 7.2]

*3: 5 SUBSCRIBE from NUT to P-CSCF

See generic_SUBSCRIBE

- Security behavior:

The integrity and confidentiality of the REGISTER request for authentication and all following SIP messages SHALL be protected. [TS33.203 7.2]

*4: 8 NOTIFY 200 OK from NUT to P-CSCF

See generic_200-NOTIFY

- Security behavior:

The integrity and confidentiality of the REGISTER request for authentication and all following SIP messages SHALL be protected. [TS33.203 7.2]

4.2 Session Establishment

4.2.1 UE-SE-B-1 - Session initiation and termination (Sends INVITE and receives BYE)

[NAME]

UE-SE-B-1 - Session initiation and termination (Sends INVITE and receives BYE)

[TARGET]

IMS User Equipment (NUT)

[PURPOSE]

- (1) To verify that the UEa1 properly creates INVITE request and receives the responses relating INVITE request.
- (2) To verify that the UEa1 properly receives BYE request and responds to BYE request.

[REFERENCE]

TS24.229 6.1.1

[OBSERVABLE RESULTS]

*1: 8 ACK from NUT to P-CSCF

See generic_ACK

The UE SHALL acknowledge the response with an ACK request.[TS24.229 5.1.3.1]

The UAC core MUST generate an ACK request for each 2xx received from the transaction layer.[RFC3261 13.2.2.4]

*2: 9 BYE from NUT to P-CSCF

See generic_BYE

The UE SHALL send a BYE request to this dialog in order to terminate it.
[TS24.229 5.1.3.1]

4.3 SDP

4.3.1 UE-SD-B-1 - SDP offer which included one or more media lines which was offered with several codecs (Receives INVITE and sends BYE)

[NAME]

UE-SD-B-1 - SDP offer which included one or more media lines which was offered with several codecs (Receives INVITE and sends BYE)

[TARGET]

IMS User Equipment (NUT)

[PURPOSE]

To verify that the UEa1 properly process an INVITE with a SDP offer which included one or more media lines which was offered with several codecs, and responds with a 200 (OK) response included proper SDP selecting exactly one codec per payload and indicate only the selected codec for the related media stream.

[OBSERVABLE RESULTS]

*1: 2 415 Unsupported Media Type from NUT to P-CSCF.

See generic_3XX-6XX

- Exception{

* To

If a request contained a To tag in the request, the To header field

in the response MUST equal that of the request.[RFC3261 8.2.6.2]

The same tag MUST be used for all responses to that request, both final and provisional. [RFC3261 8.2.6.2])

}

- Header Field:

The server MUST return a list of acceptable formats using the Accept, Accept-Encoding, or Accept-Language header field, depending on the specific problem with the content.[RFC3261 21.4.13]

* Accept

The response MUST contain an Accept header field listing the types of all bodies it understands, in the event the request contained bodies of types not supported by the UAS.[RFC3261 8.2.3]

* Accept-Encoding

If the request contained content encodings not understood by the UAS, the response MUST contain an Accept-Encoding header field listing the encodings understood by the UAS.[RFC3261 8.2.3]

* Accept-Language

If the request contained content with languages not understood by the UAS, the response MUST contain an Accept-Language header field indicating the languages understood by the UAS.[RFC3261 8.2.3]

4.6.7 UE-SR-B-7 - Sending 416 response

[NAME]

UE-SR-B-7 - Sending 416 response

[TOPOLOGY]

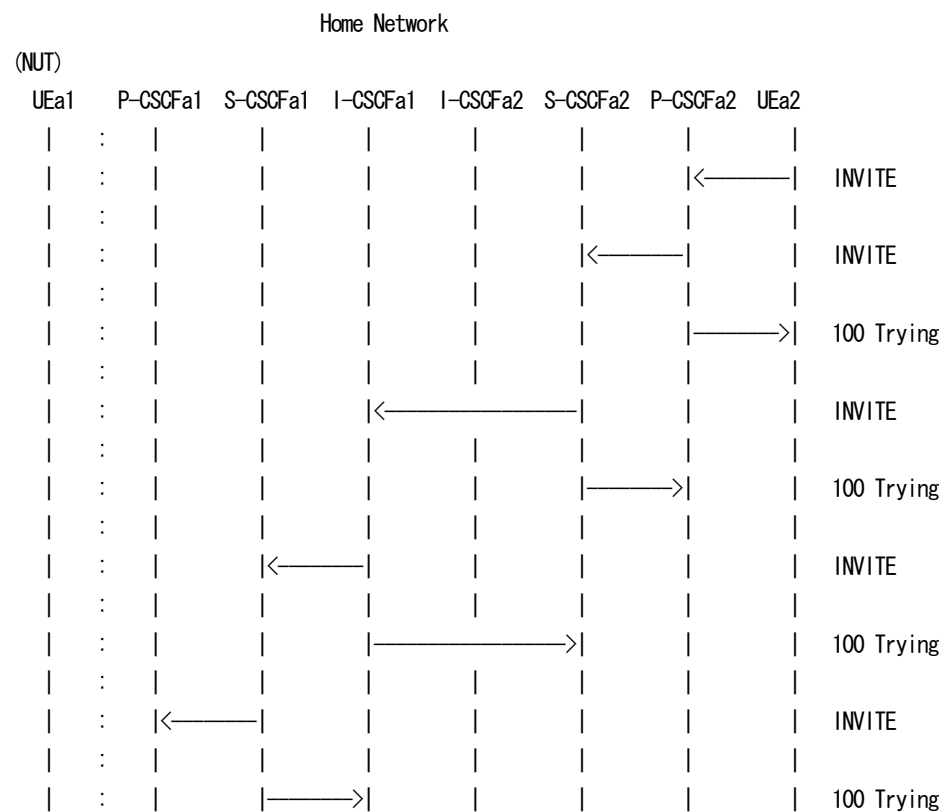

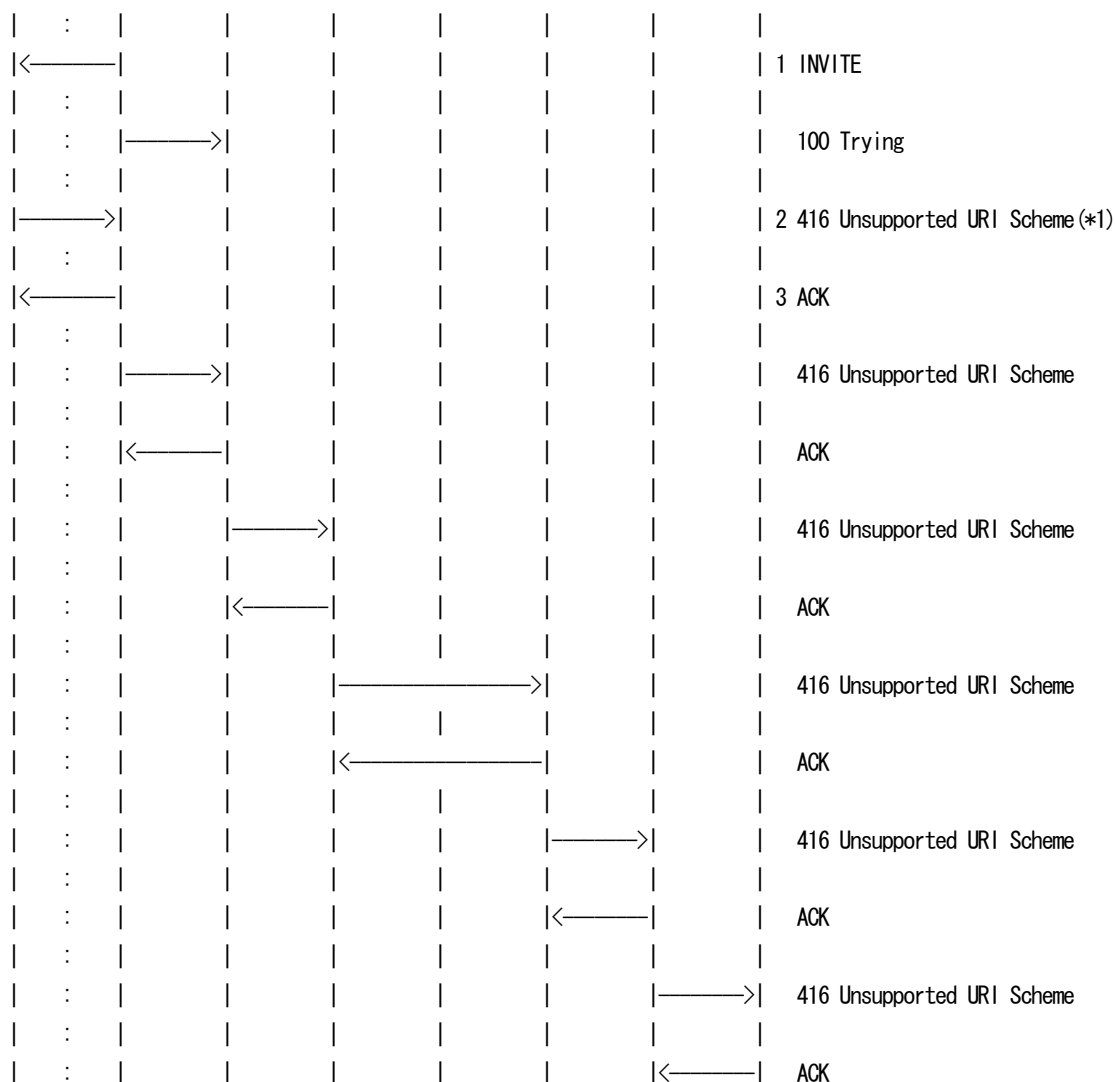

[INITIALIZATION]

UEa1(NUT) must be registered with the tester by executing the scenario “UE-INI-B-1”.
For details of “UE-INI-B-1”, refer to the profile “UE-RG-B-1”.

[PROCEDURE]

- 1 NUT receives INVITE
- 2 NUT sends 180 Ringing
- 3 NUT receives INVITE(from different path)
- 4 NUT sends 482 Loop Detected
- 5 NUT receives ACK
- 6 NUT sends 200 OK
- 7 NUT receives ACK
- 8 NUT receives BYE
- 9 NUT sends 200 OK

Content-Length: 0

[OBSERVABLE RESULTS]

*1: 4 ACK from NUT to P-CSCF.

See generic_ACK-non2XX

4.7.27 UE-RR-B-27 - Receiving 606 response

[NAME]

UE-RR-B-27 - Receiving 606 response

[TARGET]

IMS User Equipment (NUT)

[PURPOSE]

To verify that the UEa1 properly process a 606 (Not Acceptable) response, and verify that the UEa1 properly creates an ACK request.

[REFERENCE]

TS24.229 A.2.1.4.1

[REQUIREMENT]

NONE

[PARAMETER(NUT)]

public-user-id	:	sip:UEa1_public_1@under.test.com
private-user-id	:	UEa1_private@under.test.com
contact_URI	:	sip:UEa1_public_1@node.under.test.com
HOMENETWORK Domain	:	sip:under.test.com

[PARAMETER(TESTER)]

[TOPOLOGY]

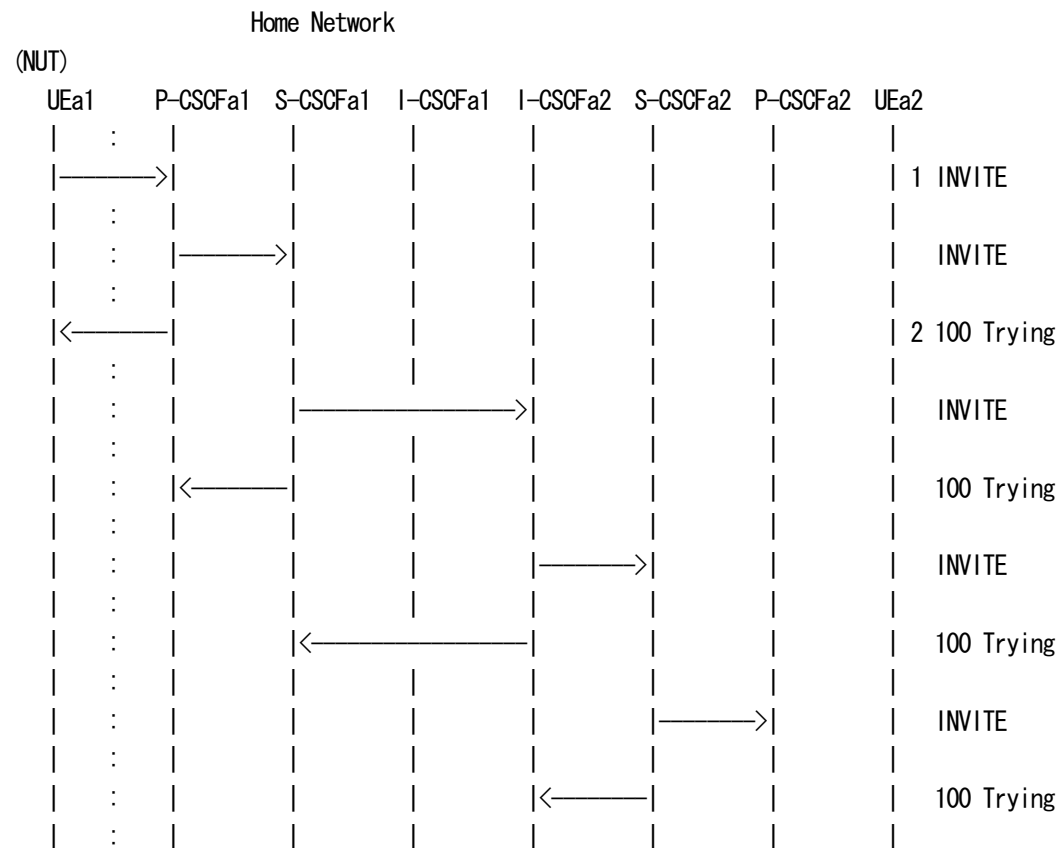

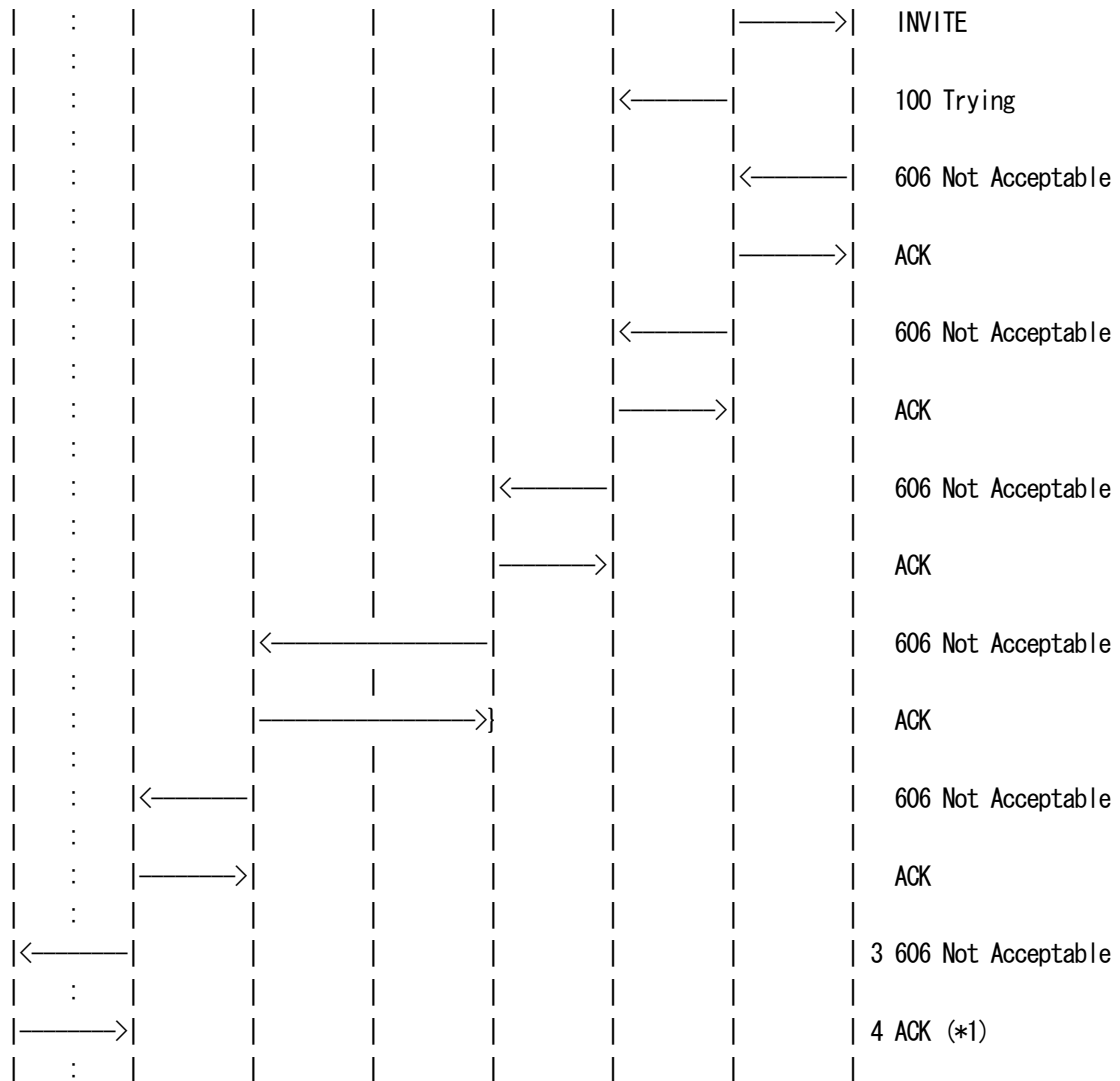

[INITIALIZATION]

UEa1(NUT) must be registered with the tester by executing the scenario “UE-INI-B-1”.
For details of “UE-INI-B-1”, refer to the profile “UE-RG-B-1”.

[PROCEDURE]

- 1 NUT sends INVITE
- 2 NUT receives 100 Trying
- 3 NUT receives 606 Not Acceptable
- 4 NUT sends ACK

== Message example ==

As regards the message 1-2, please refer to the message 1-2 in UE-SE-B-1.

3. 606 Not Acceptable P-CSCF -> NUT
 SIP/2.0 606 Not Acceptable
 Via: SIP/2.0/UDP [3ffe:501:ffff:1000::1000]:1357;branch=z9hG4bK74bf9

See generic_ACK-non2XX

4.8 SigComp

4.8.1 UE-SC-B-1 - SigComp for IMS (Sends INVITE and receives BYE)

[NAME]
UE-SC-B-1 - SigComp for IMS (Sends INVITE and receives BYE)

[TARGET]
IMS User Equipment (NUT)

[PURPOSE]
To verify that the UEa1 properly uses SigComp to signaling.

(1) To verify that the UEa1 properly compress SIP messages.

(2) To verify that the UEa1 properly decompress compressed messages.

(3) To verify that the UEa1 finished compartment when it is deregistered.

[OBSERVABLE RESULTS]

*1: 5 SUBSCRIBE from NUT to P-CSCF

See generic_SUBSCRIBE

- Header Field:

* Contact

If UE would like to receive subsequent requests within the same dialog in the UAS->UAC direction compressed, UE SHOULD add the parameter comp=sigcomp to the URI in the Contact header field.

[RFC3486 4]

If UE sends a compressed request, UE SHOULD add the parameter `comp=sigcomp` to the URI in the Contact header field[RFC3486 4]

A SIP/SigComp application placing its URI with the '`comp=sigcomp`' parameter in a header field MUST add a '`sigcomp-id`' parameter with its SIP/SigComp identifier to that URI.[RFC5049 9.1]

The SIP URI '`sigcomp-id`' parameter MUST contain a URN [RFC2141].
[RFC5049 9.1]

URN MUST be persistent as long as the application stores compartment state related to other SIP/SigComp applications.[RFC5049 9.1]

* P-Access-Network-Info

UE SHALL insert a P-Access-Network-Info header into any request for a dialog, any subsequent request (except ACK requests and CANCEL requests) or response (except CANCEL responses) within a dialog or any request for a standalone method[TS24.229 5.1.2A.1]

* Via

If UE sends a compressed request, UE SHOULD add the parameter `comp=sigcomp` to the topmost entry of the Via header field.
[RFC3486 4]

A SIP/SigComp application generating its own Via entry containing the '`comp=sigcomp`' parameter MUST add a '`sigcomp-id`' parameter with its SIP/SigComp identifier to that Via entry.[RFC5049 9.1]

The Via '`sigcomp-id`' parameter MUST contain a URN [RFC2141].
[RFC5049 9.1]

URN MUST be persistent as long as the application stores compartment state related to other SIP/SigComp applications.[RFC5049 9.1]

- Sigcomp behavior:

UE SHOULD compress the requests and responses if UE generates these containing a P-Access-Network-Info header with a value of
"3GPP-GERAN", "3GPP-UTRAN-FDD", "3GPP-UTRAN-TDD", "3GPP2-1X",
"3GPP2-1X-HRPD", "IEEE-802.11", "IEEE-802.11a", "IEEE-802.11b" or
IEEE-802.11g".[TS24.229 8.1.2]

*2: 8 200 OK to NOTIFY from NUT to P-CSCF

See generic_200-NOTIFY

- Header Field:

* P-Access-Network-Info

UE SHALL insert a P-Access-Network-Info header into any request for a dialog, any subsequent request (except ACK requests and CANCEL requests) or response (except CANCEL responses) within a dialog or any request for a standalone method.[TS24.229 5.1.2A.1]

UE SHALL insert a P-Access-Network-Info header into any response to a request for a dialog, any subsequent request (except CANCEL requests) or response (except CANCEL responses) within a dialog or any response to a standalone method.[TS24.229 5.1.2A.2]

- Sigcomp behavior:

UE SHOULD compress the requests and responses if UE generates these containing a P-Access-Network-Info header with a value of "3GPP-GERAN", "3GPP-UTRAN-FDD", "3GPP-UTRAN-TDD", "3GPP2-1X", "3GPP2-1X-HRPD", "IEEE-802.11", "IEEE-802.11a", "IEEE-802.11b" or IEEE-802.11g".[TS24.229 8.1.2]

If the topmost Via header field contains the parameter comp=sigcomp, the response SHOULD be compressed.[RFC3486 5]

*3: 9 INVITE from NUT to P-CSCF

See generic_INVITE

- Header Field:

* Contact

If UE would like to receive subsequent requests within the same dialog in the UAS->UAC direction compressed, UE SHOULD add the parameter comp=sigcomp to the URI in the Contact header field.
[RFC3486 4]

If UE sends a compressed request, UE SHOULD add the parameter comp=sigcomp to the URI in the Contact header field[RFC3486 4]

A SIP/SigComp application placing its URI with the 'comp=sigcomp' parameter in a header field MUST add a 'sigcomp-id' parameter with its SIP/SigComp identifier to that URI.[RFC5049 9.1]

The SIP URI 'sigcomp-id' parameter MUST contain a URN [RFC2141].
[RFC5049 9.1]

URN MUST be persistent as long as the application stores compartment state related to other SIP/SigComp applications.[RFC5049 9.1]

* P-Access-Network-Info

UE SHALL insert a P-Access-Network-Info header into any request for a dialog, any subsequent request (except ACK requests and CANCEL requests) or response (except CANCEL responses) within a dialog or any request for a standalone method[TS24.229 5.1.2A.1]

* Via

If UE sends a compressed request, UE SHOULD add the parameter comp=sigcomp to the topmost entry of the Via header field.
[RFC3486 4]

A SIP/SigComp application generating its own Via entry containing the 'comp=sigcomp' parameter MUST add a 'sigcomp-id' parameter with its SIP/SigComp identifier to that Via entry.[RFC5049 9.1]

The Via 'sigcomp-id' parameter MUST contain a URN [RFC2141].
[RFC5049 9.1]

URN MUST be persistent as long as the application stores compartment state related to other SIP/SigComp applications.[RFC5049 9.1]

- Sigcomp behavior:

UE SHOULD compress the requests and responses if UE generates these containing a P-Access-Network-Info header with a value of "3GPP-GERAN", "3GPP-UTRAN-FDD", "3GPP-UTRAN-TDD", "3GPP2-1X", "3GPP2-1X-HRPD", "IEEE-802.11", "IEEE-802.11a", "IEEE-802.11b" or IEEE-802.11g".[TS24.229 8.1.2]

*4: 13 ACK from NUT to P-CSCF

See generic_ACK

- Header Field:

* Via

If UE sends a compressed request, UE SHOULD add the parameter comp=sigcomp to the topmost entry of the Via header field.
[RFC3486 4]

A SIP/SigComp application generating its own Via entry containing the 'comp=sigcomp' parameter MUST add a 'sigcomp-id' parameter with its SIP/SigComp identifier to that Via entry.[RFC5049 9.1]

The Via 'sigcomp-id' parameter MUST contain a URN [RFC2141].
[RFC5049 9.1]

URN MUST be persistent as long as the application stores compartment state related to other SIP/SigComp applications.[RFC5049 9.1]

- Sigcomp behavior:

If the next-hop URI contains the parameter comp=sigcomp, the UE SHOULD compress the request using SigComp.[RFC3486 4][RFC5049 9.4]

*5: 15 200 OK to BYE from NUT to P-CSCF

See generic_200

- Header Field:

* P-Access-Network-Info

UE SHALL insert a P-Access-Network-Info header into any request for a dialog, any subsequent request (except ACK requests and CANCEL requests) or response (except CANCEL responses) within a dialog or any request for a standalone method[TS24.229 5.1.2A.1]

UE SHALL insert a P-Access-Network-Info header into any response to a request for a dialog, any subsequent request (except CANCEL requests) or response (except CANCEL responses) within a dialog or any response to a standalone method.[TS24.229 5.1.2A.2]

- Sigcomp behavior:

UE SHOULD compress the requests and responses if UE generates these containing a P-Access-Network-Info header with a value of "3GPP-GERAN", "3GPP-UTRAN-FDD", "3GPP-UTRAN-TDD", "3GPP2-1X", "3GPP2-1X-HRPD", "IEEE-802.11", "IEEE-802.11a", "IEEE-802.11b" or IEEE-802.11g".[TS24.229 8.1.2]

If the topmost Via header field contains the parameter comp=sigcomp, the response SHOULD be compressed.[RFC3486 5]

*6: 17 200 OK to NOTIFY from NUT to P-CSCF

See generic_200-NOTIFY

- Header Field:

* P-Access-Network-Info

UE SHALL insert a P-Access-Network-Info header into any request for a dialog, any subsequent request (except ACK requests and CANCEL requests) or response (except CANCEL responses) within a dialog or any request for a standalone method[TS24.229 5.1.2A.1]

UE SHALL insert a P-Access-Network-Info header into any response to a request for a dialog, any subsequent request (except CANCEL requests) or response (except CANCEL responses) within a dialog or any response to a standalone method.[TS24.229 5.1.2A.2]

- Sigcomp behavior:

UE SHOULD compress the requests and responses if UE generates these containing a P-Access-Network-Info header with a value of "3GPP-GERAN", "3GPP-UTRAN-FDD", "3GPP-UTRAN-TDD", "3GPP2-1X", "3GPP2-1X-HRPD", "IEEE-802.11", "IEEE-802.11a", "IEEE-802.11b" or "IEEE-802.11g".[TS24.229 8.1.2]

If the topmost Via header field contains the parameter comp=sigcomp, the response SHOULD be compressed.[RFC3486 5]

*7: 19 No response or send NACK

- Sigcomp behavior:

UE SHALL finish the compartment when the UE is deregistered.
[TS24.229 8.1.1]

4.8.2 UE-SC-B-2 - SigComp for IMS (Receive INVITE and send BYE)

[NAME]

UE-SC-B-2 - SigComp for IMS (Receive INVITE and send BYE)

[TARGET]

IMS User Equipment (NUT)

[PURPOSE]

To verify that the UEa1 properly uses SigComp to signaling.

(1) To verify that the UEa1 properly compress SIP messages.

(2) To verify that the UEa1 properly decompress compressed messages.

P-Access-Network-Info: 3GPP-UTRAN-TDD;utran-cell-id-3gpp=123456A1BDS23

Content-Length: 0

[OBSERVABLE RESULTS]

*1: 10 180 Ringing from NUT to P-CSCF

See generic_180-INVITE

- Header Field:

* P-Access-Network-Info

UE SHALL insert a P-Access-Network-Info header into any request for a dialog, any subsequent request (except ACK requests and CANCEL requests) or response (except CANCEL responses) within a dialog or any request for a standalone method[TS24.229 5.1.2A.1]

UE SHALL insert a P-Access-Network-Info header into any response to a request for a dialog, any subsequent request (except CANCEL requests) or response (except CANCEL responses) within a dialog or any response to a standalone method.[TS24.229 5.1.2A.2]

- Sigcomp behavior:

UE SHOULD compress the requests and responses if UE generates these containing a P-Access-Network-Info header with a value of "3GPP-GERAN", "3GPP-UTRAN-FDD", "3GPP-UTRAN-TDD", "3GPP2-1X", "3GPP2-1X-HRPD", "IEEE-802.11", "IEEE-802.11a", "IEEE-802.11b" or IEEE-802.11g".[TS24.229 8.1.2]

If the topmost Via header field contains the parameter comp=sigcomp, the response SHOULD be compressed.[RFC3486 5]

*2: 11 200 OK from NUT to P-CSCF

See generic_200-INVITE

- Header Field:

* Contact

UE SHOULD add comp=sigcomp to the Contact header field of the response if the URI of the next upstream hop in the route set contained the parameter comp=sigcomp.[RFC3486 5]

A SIP/SigComp application placing its URI with the 'comp=sigcomp'

parameter in a header field MUST add a 'sigcomp-id' parameter with its SIP/SigComp identifier to that URI.[RFC5049 9.1]

The SIP URI 'sigcomp-id' parameter MUST contain a URN [RFC2141]. [RFC5049 9.1]

URN MUST be persistent as long as the application stores compartment state related to other SIP/SigComp applications.[RFC5049 9.1]

* P-Access-Network-Info

UE SHALL insert a P-Access-Network-Info header into any request for a dialog, any subsequent request (except ACK requests and CANCEL requests) or response (except CANCEL responses) within a dialog or any request for a standalone method[TS24.229 5.1.2A.1]

UE SHALL insert a P-Access-Network-Info header into any response to a request for a dialog, any subsequent request (except CANCEL requests) or response (except CANCEL responses) within a dialog or any response to a standalone method.[TS24.229 5.1.2A.2]

- Sigcomp behavior:

UE SHOULD compress the requests and responses if UE generates these containing a P-Access-Network-Info header with a value of "3GPP-GERAN", "3GPP-UTRAN-FDD", "3GPP-UTRAN-TDD", "3GPP2-1X", "3GPP2-1X-HRPD", "IEEE-802.11", "IEEE-802.11a", "IEEE-802.11b" or IEEE-802.11g".[TS24.229 8.1.2]

If the topmost Via header field contains the parameter comp=sigcomp, the response SHOULD be compressed.[RFC3486 5]

*3: 13 BYE from NUT to P-CSCF

See generic_BYE

- Header Field:

* P-Access-Network-Info

UE SHALL insert a P-Access-Network-Info header into any request for a dialog, any subsequent request (except ACK requests and CANCEL requests) or response (except CANCEL responses) within a dialog or any request for a standalone method[TS24.229 5.1.2A.1]

* Via

If UE sends a compressed request, UE SHOULD add the parameter comp=sigcomp to the topmost entry of the Via header field.
[RFC3486 4]

A SIP/SigComp application generating its own Via entry containing the 'comp=sigcomp' parameter MUST add a 'sigcomp-id' parameter with its SIP/SigComp identifier to that Via entry.[RFC5049 9.1]

The Via 'sigcomp-id' parameter MUST contain a URN [RFC2141].
[RFC5049 9.1]

URN MUST be persistent as long as the application stores compartment state related to other SIP/SigComp applications.[RFC5049 9.1]

- Sigcomp behavior:

UE SHOULD compress the requests and responses if UE generates these containing a P-Access-Network-Info header with a value of "3GPP-GERAN", "3GPP-UTRAN-FDD", "3GPP-UTRAN-TDD", "3GPP2-1X", "3GPP2-1X-HRPD", "IEEE-802.11", "IEEE-802.11a", "IEEE-802.11b" or IEEE-802.11g".[TS24.229 8.1.2]

If the next-hop URI contains the parameter comp=sigcomp, the UE SHOULD compress the request using SigComp.[RFC3486 4][RFC5049 9.4]
