4. Test Profile: User Equipment operation	55
4.1 Registration	55
4.1.1 UE-RG-B-1 - Initial registration and subscription for the registration state	event
package (SIP default port values)	55
4.1.2 UE-RG-B-2 - User-initiated reregistration	62
4.1.3 UE-RG-B-3 - Network-initiated re-athentication	67
4.1.4 UE-RG-B-4 - User-initiated reregistration	74
4.1.5 UE-RG-B-5 - Network-initiated deregistration with rejected event	
4.1.6 UE-RG-B-6 - Netowrk-initiated deregistration with deactivated event	
4.1.7 UE-RG-B-7 - Reception of 423 response to initial registration	
4.1.8 UE-RG-B-8 - Re-subscription for the registration state event package	102

4.1.9 UE-RG-B-9 - Reception of 481 response to subscription for the registration
state event package108
4.1.10 UE-RG-B-10 - Reception of a new service-route to reregistration114
4.1.11 UE-RG-B-11 - Reception of 423 response to reregistration123
4.1.12 UE-RG-B-12 - Reception of 408 response to reregistration129
4.1.13 UE-RG-B-13 - Reception of 500 response to reregistration137
4.1.14 UE-RG-B-14 - Reception of 504 response to reregistration146
4.1.15 UE-RG-B-15 - Timer F expiration (Registration)155
4.1.16 UE-RG-B-16 - Reception of 401 response with no Security-Server header to
initial registration163
4.1.17 UE-RG-B-17 - Charge from the old SAs to the new SAs168
4.1.18 UE-RG-B-18 - Reception of 403 response to initial registration179
4.1.19 UE-RG-B-19 - Invalid authentication parameter190
4.1.20 UE-RG-B-20 - User-initiated deregistration and dialog release198
4.1.21 UE-RG-B-21 - Reception of 401 response to user-initiated deregistration207
4.1.22 UE-RG-B-22 - Reception of 503 response to subscription for the registration
state event package213
4.2 Session Establishment217
4.2.1 UE-SE-B-1 - Session initiation and termination (Sends INVITE and receives
BYE)217
4.2.2 UE-SE-B-2 - Session initiation and termination (Sends INVITE and sends BYE)224
4.2.3 UE-SE-B-3 - Session initiation and termination (Receives INVITE and receives
BYE)231
4.2.4 UE-SE-B-4 - Session initiation and termination (Receives INVITE and sends
BYE)239
4.2.5 UE-SE-B-5 - Call Cancellaration (Sends INVITE and sends CANCEL)247
4.2.6 UE-SE-B-6 - Call Cancellaretion (Receives INVITE and receives CANCEL)253
4.2.7 UE-SE-B-7 - SIP response received from the P-CSCF outside of the registration260
4.2.8 UE-SE-B-8 - SIP Request received from the P-CSCF outside of the registration268
4.2.9 UE-SE-B-9 - Receiving 503 response to INVITE271
4.2.10 UE-SE-B-10 - Receiving forked 180 and response280
4.3 SDP290
4.3.1 UE-SD-B-1 - SDP offer which included one or more media lines which was
offered with several codecs (Receives INVITE and sends BYE)290
4.3.2 UE-SD-B-2 - SDP offer which included an IP address type that is not supported
(Receives INVITE and sends BYE)297
4.4 OPTIONS303
4.4.1 UE-OP-B-1 - OPTIONS request (Sends OPTIONS)303
4.4.2 UE-OP-B-2 - OPTIONS request (Receives OPTIONS)307
4.5 SIP timer311
4.5.1 UE-TM-B-1 - Timer B expiration to INVITE311
4.5.2 UE-TM-B-2 - Timer D expiration
4.5.3 UE-TM-B-3 - Timer H expiration
4.5.4 UE-TM-B-4 - Timer J expiratoin325

4.5.5 UE-TM-B-5 - Timer F expiration (In Session)	332
4.6 Sending Response	337
4.6.1 UE-SR-B-1 - Sending 400 response	337
4.6.2 UE-SR-B-2 - Sending 404 response	341
4.6.3 UE-SR-B-3 - Sending 405 response	346
4.6.4 UE-SR-B-4 - Sending 406 response	349
4.6.5 UE-SR-B-5 - Sending 414 response	354
4.6.6 UE-SR-B-6 - Sending 415 response	359
4.6.7 UE-SR-B-7 - Sending 416 response	365
4.6.8 UE-SR-B-8 - Sending 420 response	370
4.6.9 UE-SR-B-9 - Sending 480/486 response	375
4.6.10 UE-SR-B-10 - Sending 482 response	380
4.6.11 UE-SR-B-11 - Sinding 489 response	390
4.6.12 UE-SR-B-12 - Sending 500 response	397
4.6.13 UE-SR-B-13 - Sending 505 response	405
4.7 Receiving Response	410
4.7.1 UE-RR-B-1 - Receiving 100 response	410
4.7.2 UE-RR-B-2 - Receiving 181 response (Call transfer by S-CSCFa2 to UEa2')	421
4.7.3 UE-RR-B-3 - Receiving 182 response (Request is queued by P-CSCFa2)	429
4.7.4 UE-RR-B-4 - Receiving 183 responsee	434
4.7.5 UE-RR-B-5 - Receiving 202 response	439
4.7.6 UE-RR-B-6 - Receiving 400 response	443
4.7.7 UE-RR-B-7 - Receiving 404 response	446
4.7.8 UE-SR-B-8 - Receiving 405 response	450
4.7.9 UE-RR-B-9 - Receiving 406 response	454
4.7.10 UE-RR-B-10 - Receiving 410 response	459
4.7.11 UE-RR-B-11 - Receiving 413 response	463
4.7.12 UE-RR-B-12 - Receiving 414 response	467
4.7.13 UE-RR-B-13 - Receiving 415 response	471
4.7.14 UE-RR-B-14 - Response 480 response	475
4.7.15 UE-RR-B-15 - Receiving 482 response	478
4.7.16 UE-RR-B-16 - Receiving 483 response	481
4.7.17 UE-RR-B-17 - Receiving 484 response	485
4.7.18 UE-RR-B-18 - Receiving 485 response	488
4.7.19 UE-RR-B-19 - Receiving 488 response	492
4.7.20 UE-RR-B-20 - Receiving 501 response	496
4.7.21 UE-RR-B-21 - Receivning 502 response	500
4.7.22 UE-RR-B-22 - Receiving 505 response	503
4.7.23 UE-RR-B-23 - Receiving 513 response	508
4.7.24 UE-RR-B-24 - Receiving 600 response	512
4.7.25 UE-RR-B-25 - Receiving 603 response	515
4.7.26 UE-RR-B-26 - Receiving 604 response	519
4.7.27 UE-RR-B-27 - Receiving 606 response	523
4.8 SigComp	527

4.8.1 UE-SC-B-1	- SigComp for IMS (Sends INVITE and receives BYE)	527
4.8.2 UE-SC-B-2	- SigComp for IMS (Receive INVITE and send BYE)	547
AUTHORS' LIST	<u>, </u>	565

1 Overview

This document describes details of the IMS Conformance Test. The format of the description block is as follows:

Description block

[NAME]	NAME is a name of the test.
[TARGET]	TARGET is a target node of the test.
[PURPOSE]	PURPOSE is a short statement describing what the test
	attempts to achieve. It is usually phrased as a simple
	assertion of the feature or capability to be tested.
[REFERENCE]	REFERENCE section contains some parts of specification
	related to the tests. It also shows the document names
	and section numbers.
[REQUIREMENT]	REQUIREMENT section specifies the functions and
	conditions that will be needed to perform the test.
[PARAMETER]	PARAMETER describes SIP URIs on the topology that
	relates to the test
[ADDRESS]	ADDRESS describes IP addresses on the topology that
	relates to the test.
[TOPOLOGY]	TOPOLOGY describes the network used in the test.
[INITIALIZATION]	INITIALIZATION describes step-by-step instructions for
	carrying out the setting before the test.
[PROCEDURE]	PROCEDURE describes step-by-step instructions for
	carrying out the test.
[OBSERVABLE RESULTS]	OBSERVABLE RESULTS describes expected result.
	If we can observe as same result as the description of
	Judgment, the NUT passes the test.

NOTE: There are common observable resaluts in the category of OBSERVABLE RESULTS. Refer to Section 3.

Acronyms

UE - IMS User Equopment

P-CSCF - IMS Proxy Call/Session Control Function

I-CSCF - IMS Interrogating Call/Session Control Function

S-CSCF - IMS Serving Call/Session Control Function

IF - Interface

UNI - User-Network Interface
NNI - Network-Network Interface

Reference standards

The following documents are referenced in the test specifications.

[IMS]

Index

ex . [RFC3261 X.X.X] Please refer to the the section in RFC3261

3

2 Requirements of conformance test

2.1 Requirements based on Policy of IMS IPv6 Ready Logo

[PRq]

- 1. Supported transport protocol is only UDP.
- 2. The path MTU is 1500 bytes.
- 3. Supported URI scheme is only SIP-URI.
- 4. Only unicast session is supported.

2.2 Other Requirements

[ORq]

- 1. INVITE requests includes the bodies and any other requests doesn't include the bodies
- 2. IMS-AKA is mandatory at registration.

3 Common Observable Results

3.1 generic_sip_message

Generic judgement items for SIP message.

- -The start-line, each message-header line, and the empty line MUST be terminated by a carriage-return line-feed sequence (CRLF).[RFC3261 7]
- -If the @ sign is present in a SIP or SIPS URI, the user field MUST NOT be empty. [RFC3261 $19.1.1\]$
- -Using the fully-qualified domain name form is RECOMMENDED in the host part.[RFC3261 19.1.1]
- -The special characters MUST be in a quoted string to be used within a parameter value.[RFC3261 25.1]
- Request-Line:
 - -Applications sending SIP messages MUST include a SIP-Version of "SIP/2.0". [RFC3261 7.1]
 - -Implementations MUST send upper-case. [RFC3261 7.1]
- Header fields:
 - -It is RECOMMENDED that header fields which are needed for proxy processing (Via, Route, Record-Route, Proxy-Require, Max-Forwards, and

4

Proxy-Authorization, for example) appear towards the top of the message to facilitate rapid parsing. [RFC3261 7.3.1]

- -If Contact, From, and To header fields contain URI with a comma, question mark or semicolon, the URI MUST be enclosed in angle brackets (< and >). [RFC3261 20]
- * Content-Length
 - -Applications SHOULD use this field to indicate the size of the message-body to be transferred.[RFC3261 20.14]
- * From
 - -Even if the "display- name" is empty, the "name-addr" form MUST be used if the "addr-spec" contains a comma, question mark, or semicolon. [RFC3261 20.20]
- * To
 - -All SIP implementations MUST support the SIP URI scheme. [RFC3261 8.1.1.2]

3.2 generic_REGISTER

Generic judgement items for REGISTER request.

See generic_sip_message

- -The initial registration SHALL be authenticated at any time. [TS33.203 5.1.2]
- -The empty line MUST be present even if the message-body is not.[RFC3261 7]
- Request-Line:
 - -Request-URI SHALL be set to the SIP URI of the domain name of the home network.[TS24.229 5.1.1.2]
 - -The Request-URI MUST NOT contain unescaped space control characters. [RFC3261 7.1]
 - -The Request-URI MUST NOT be enclosed in "<>". [RFC3261 7.1]
 - -The "userinfo" and "@" components of the SIP URI MUST NOT be present. [RFC3261 10.2]
- Header fields:
 - -An Expires header field or the expires parameter within the Contact header field SHALL be set to the value of 600 000 seconds. [TS24.229 5.1.1.2]
 - -A valid SIP request formulated by a UAC MUST contain To, From, CSeq, Call-ID, Max-Forwards, and Via header fields. [RFC3261 8.1.1]

-The client MUST add both a Require and Proxy-Require header field with the value "sec-agree" to its request.[RFC3329 2.3.1]

* Authorization header

- -The username directive in Authorization header field SHALL be set to the value of the private user identity.[TS24.229 5.1.1.2]
- -The realm directive in Authorization header field SHALL be set to the value of the domain name of the home network.[TS24.229 5.1.1.2]
- -The uri directive in Authorization header field SHALL be set to the SIP URI of the domain name of the home network.[TS24.229 5.1.1.2]
- -The nonce directive in Authorization header field SHALL be empty. [TS24.229 5.1.1.2]
- -The response directive in Authorization header field SHALL be empty. [TS24.229 5.1.1.2]
- -WWW-Authenticate, Authorization, Proxy-Authenticate or Proxy-Authorization MUST NOT be combined into a single header field row. [RFC3261 7.3.1]

* Contact

- -Contact header field SHALL be set to SIP URIs containing the IP address of the UE in the hostport parameter or FQDN. [TS24.229 5.1.1.2]
- -The hostport parameter in Contact header field SHALL include the protected server port value if the REGISTER request is protected by a security association.[TS24.229 5.1.1.2]
- -UACs SHOULD NOT use the "action" parameter.[RFC3261 10.2]
- -Even if the "display-name" is empty, the "name-addr" form MUST be used if the "addr-spec" contains a comma, semicolon, or question mark.[RFC3261 20.10]

* Content-length

-The Content-Length header field value MUST be set to zero. [RFC3261 20.14]

* CSeq

- -The method in the CSeq header field MUST match that of the request. [RFC3261 8.1.1.5]
- -The sequence number value in the CSeq header field MUST be expressible as a 32-bit unsigned integer. [RFC3261 8.1.1.5] [RFC3261 20.16]
- -The sequence number value in the CSeq header field MUST be less

than 2**31. [RFC3261 8.1.1.5]

* From

- -From header field SHALL be set to the SIP URI that contains the public user identity to be registered or deregistered.[TS24.229 5.1.1.2]
- -The From field MUST contain a new "tag" parameter, chosen by the UAC.[RFC3261 8.1.1.3]

* Max-Forwards

- -A UAC MUST insert a Max-Forwards header field into each request it originates. [RFC3261 8.1.1.6]
- -The Max-Forwards header field value SHOULD be 70. [RFC3261 8.1.1.6]

* To

- -To header field SHALL be set to the SIP URI that contains the public user identity to be registered.[TS24.229 5.1.1.2]
- -A request outside of a dialog MUST NOT contain a To tag. [RFC3261 8.1.1.2]
- -An address-of-record field included in To header field MUST be a SIP URI or SIPS URI.[RFC3261 10.2]

* P-Access-Network-Info 3GPP UA SHOULD NOT send P-Access-Network-Info header in any initial unauthenticated and unprotected request.[RFC3455 6.4]

* P-Called-Party-ID

-A UAC MUST NOT insert a P-Called-Party-ID header field in any SIP request or response.[RFC3455 4.2.2.1]

* Proxy-Require

-A UAC MUST insert a Proxy-Require header field into the request listing the option tag for that extension. [RFC3261 8.1.1.9]

* Security-Client

- -The Security-Client header field SHALL be set to the security mechanism the UE supports, the IPsec layer algorithms the UE supports and the parameters needed for the security association setup.[TS24.229 5.1.1.2]
- -A client wishing to use the security agreement of this specification MUST add a Security-Client header field to a request addressed to its first-hop proxy.[RFC3329 2.3.1]

7

* Supported

- -The option tag "path " SHALL be contained in the Supported header field.[TS24.229 5.1.1.2]
- -The UA SHOULD include the option tag "path" as a header field value in all Supported header fields.[RFC3327 5.1]
- -The UA SHOULD include a Supported header field in all requests. [RFC3327 5.1]

* Via

- -The IP address or FQDN of the UE SHALL be included in the sent-by field of the Via header field. [TS24.229 5.1.1.2]
- -The protected server port value SHALL be included in the sent-by field of the Via header field for the UDP.[TS24.229 5.1.1.2]
- -A UAC MUST insert a Via into that request. [RFC3261 8.1.1.7]
- -The protocol name and protocol version in the Via header field MUST be SIP and 2.0. [RFC3261 8.1.1.7]
- -The Via header field value MUST contain a branch parameter. [RFC3261 8.1.1.7]
- -The branch ID MUST always begin with the characters "z9hG4bK". [RFC3261 8.1.1.7]
- -The client transport MUST insert a value of the "sent-by" field into the Via header field.[RFC3261 18.1.1]
- -The usage of an FQDN in sent-by field is RECOMMENDED. [RFC3261 18.1.1]
- Security Associations behavior
 - -ESP confidentiality SHALL be used in transport mode between UE and P-CSCF.[TS33.203 6.2]
 - -ESP integrity SHALL be used in transport mode between UE and P-CSCF. [TS33.203 6.3]
 - -A Security-setup-line SHALL be included in REGISTER request in order to start the security mode set-up procedure.[TS33.203 7.2]
 - -The integrity and confidentiality of the REGISTER request for authentication and all following SIP messages SHALL be protected. [TS33.203 7.2]

3.3 generic_Auth_REGISTER

Generic judgement items for Auth_REGISTER request.

See generic_sip_message

-The header fields SHALL be populated as defined for the initial request with

Authorization header field that includes value as received in the realm directive in the WWW Authenticate header field, and the private user identity and the correct authentication challenge response calculated.[TS24.229 5.1.1.5.1]

- -The empty line MUST be present even if the message-body is not.[RFC3261 7]
- -The client SHOULD NOT retry the same request without modification. $\cite{RFC3261\ 21.4}$
- -Systems using the Path mechanism SHOULD use appropriate mechanisms to provide message integrity and mutual authentication.[RFC3327 6.1]

- Request-Line

- -The Request-URI MUST NOT contain unescaped space control characters. [RFC3261 7.1]
- -The Request-URI MUST NOT be enclosed in "<>". [RFC3261 7.1]
- -The "userinfo" and "@" components of the SIP URI MUST NOT be present. $\cite{RFC3261\ 10.2}$

- Header fields

- -A valid SIP request formulated by a UAC MUST contain To, From, CSeq, Call-ID, Max-Forwards, and Via header fields. [RFC3261 8.1.1]
- -The client MUST add both a Require and Proxy-Require header field with the value "sec-agree" to its request.[RFC3329 2.3.1]
- -A subsequent SIP requests MUST also have both a Require and Proxy-Require header fields with the value "sec-agree".[RFC3329 2.3.1]

* Authorization

-WWW-Authenticate, Authorization, Proxy-Authenticate or Proxy-Authorization MUST NOT be combined into a single header field row. [RFC3261 7.3.1]

* Call-ID

- -Call-ID of the security association protected REGISTER request which carries the authentication challenge response SHALL be set to the same value as the Call-ID of the 401 (Unauthorized) response.[TS24.229 5.1.1.5.1]
- -The Call-ID header field SHOULD be the same in each registration from a UA.[RFC3261 8.1.1.4]
- -All registrations from a UAC SHOULD use the same Call-ID header field value for registrations sent to a particular registrar. [RFC3261 10.2]

* Contact

- -UACs SHOULD NOT use the "action" parameter.[RFC3261 10.2]
- -Even if the "display-name" is empty, the "name-addr" form MUST be used if the "addr-spec" contains a comma, semicolon, or question mark. $[RFC3261\ 20.10]$

* Content-length

-The Content-Length header field value MUST be set to zero.[RFC3261 20.14]

* CSeq

- -The method in the CSeq header field MUST match that of the request. [RFC3261 8.1.1.5]
- -The sequence number value in the CSeq header field MUST be expressible as a 32-bit unsigned integer. [RFC3261 8.1.1.5] [RFC3261 20.16]
- -The sequence number value in the CSeq header field MUST be less than 2**31. [RFC3261 8.1.1.5]
- -A UA MUST increment the CSeq value by one for each REGISTER request with the same Call-ID.[RFC3261 10.2]

* From

-The From field MUST contain a new "tag" parameter, chosen by the UAC.[RFC3261 8.1.1.3]

* Max-Forwards

- -A UAC MUST insert a Max-Forwards header field into each request it originates. [RFC3261 8.1.1.6]
- -The Max-Forwards header field value SHOULD be 70. [RFC3261 8.1.1.6]

* P-Called-Party-ID

-A UAC MUST NOT insert a P-Called-Party-ID header field in any SIP request or response.[RFC3455 4.2.2.1]

* Proxy-Require

-A UAC MUST insert a Proxy-Require header field into the request listing the option tag for that extension. [RFC3261 8.1.1.9]

* Security-Client

-Security-Client header field that is identical to the Security-Client header field that was included in the previous REGISTER request SHALL be inserted into the request. [TS24.229 5.1.1.5.1]

-A client wishing to use the security agreement of this specification MUST add a Security-Client header field to a request addressed to its first-hop proxy.[RFC3329 2.3.1]

* Sucurity-Verify

- -The Security-Verify header field SHALL be mirrored the content of the Security-Server header field received in the 401 (Unauthorized) response. [TS24.229 5.1.1.5.1]
- -A subsequent SIP requests MUST contain a Security-Verify header field that mirrors the server's list received previously in the Security- Server header field.[RFC3329 2.3.1]

* Supported

- -The UA SHOULD include the option tag "path" as a header field value in all Supported header fields.[RFC3327 5.1]
- -The UA SHOULD include a Supported header field in all requests. [RFC3327 5.1]

* To

- -A request outside of a dialog MUST NOT contain a To tag. [RFC3261 8.1.1.2]
- -An address-of-record field included in To header field MUST be a SIP URI or SIPS URI.[RFC3261 10.2]

* Via

- -A UAC MUST insert a Via into that request. [RFC3261 8.1.1.7]
- -The protocol name and protocol version in the Via header field MUST be SIP and 2.0. [RFC3261 8.1.1.7]
- -The Via header field value MUST contain a branch parameter. [RFC3261 8.1.1.7]
- -The branch ID MUST always begin with the characters "z9hG4bK". [RFC3261 8.1.1.7]
- -The client transport MUST insert a value of the "sent-by" field into the Via header field.[RFC3261 18.1.1]
- -The usage of an FQDN in sent-by field is RECOMMENDED. [RFC3261 18.1.1]

- Security Association behavior

-A temporary set of security associations SHALL be set up based on the static list and parameters it received in the 401 (Unauthorized) response and its capabilities sent in the Security-Client header field

- in the REGISTER request.[TS24.229 5.1.1.5.1]
- -The temporary set of security associations SHALL be set up using the most preferred mechanism and algorithm returned by the P-CSCF and supported by the UE and using IK and CK as the shared key. [TS24.229 5.1.1.5.1]
- -The parameters received in the Security-Server header field SHALL be used to setup the temporary set of security associations. [TS24.229 5.1.1.5.1]
- -REGISTER request SHALL be sent using the temporary set of security associations to protect the message.[TS24.229 5.1.1.5.1]
- -ESP confidentiality SHALL be used in transport mode between UE and P-CSCF.[TS33.203 6.2]
- -ESP integrity SHALL be used in transport mode between UE and P-CSCF. [TS33.203 6.3]
- -The integrity and confidentiality of the REGISTER request for authentication and all following SIP messages SHALL be protected. [TS33.203 7.2]
- -The REGISTER request for authentication SHALL include the integrity and encryption algorithms list, SPI_P, and Port_P received in 401 (Unauthorized) response, and SPI_U, Port_U sent in the initial REGISTER request.[TS33.203 7.2]
- -The REGISTER request for authentication to the P-CSCF SHALL be protected with the new outbound SA.[TS33.203 7.4.1a]
- -All the subsequent SIP requests sent by the client to that server SHOULD make use of the security mechanism initiated in the previous step.[RFC3329 2.3.1]
- -All clients MUST select HTTP Digest, TLS, IPsec, or any stronger method for the protection of the second request.[RFC3329 5]

3.4 generic_re_REGISTER

Generic judgement items for re_REGISTER request

See generic_sip_message

- -The empty line MUST be present even if the message-body is not.[RFC3261 7]
- -Registration refreshes SHOULD be sent to the same network address as the original registration.[RFC3261 10.2.4]
- -Systems using the Path mechanism SHOULD use appropriate mechanisms to

provide message integrity and mutual authentication.[RFC3327 6.1]

- Request-Line

- -Request-URI SHALL be set to the SIP URI of the domain name of the home network.[TS24.229 5.1.1.4]
- -The Request-URI MUST NOT contain unescaped space control characters. [RFC3261 7.1]
- -The Request-URI MUST NOT be enclosed in "<>". [RFC3261 7.1]
- -The "userinfo" and "@" components of the SIP URI MUST NOT be present. $[RFC3261\ 10.2]$

Header fields

- -An Expires header field or the expires parameter within the Contact header field SHALL be set to the value of 600 000 seconds. [TS24.229 5.1.1.4]
- -A valid SIP request formulated by a UAC MUST contain To, From, CSeq, Call-ID, Max-Forwards, and Via header fields. [RFC3261 8.1.1]
- -The client MUST add both a Require and Proxy-Require header field with the value "sec-agree" to its request.[RFC3329 2.3.1]
- -A subsequent SIP requests MUST also have both a Require and Proxy-Require header fields with the value "sec-agree".[RFC3329 2.3.1]

* Authorization header

- -The username directive in Authorization header field SHALL be set to the value of the private user identity.[TS24.229 5.1.1.4]
- -The realm directive in Authorization header field SHALL be set to the value as received in the realm directive in the WWW Authenticate header field.[TS24.229 5.1.1.4]
- -The uri directive in Authorization header field SHALL be set to the SIP URI of the domain name of the home network. [TS24.229 5.1.1.4]
- -The nonce directive in Authorization header field SHALL be set to last received nonce value.[TS24.229 5.1.1.4]
- -The response directive in Authorization header field SHALL be set to the last calculated response value.[TS24.229 5.1.1.4]
- -WWW-Authenticate, Authorization, Proxy-Authenticate or Proxy-Authorization MUST NOT be combined into a single header field row. [RFC3261 7.3.1]

* From

- -From header field SHALL be set to the SIP URI that contains the public user identity to be registered or deregistered.[TS24.229 5.1.1.4]
- -The From field MUST contain a new "tag" parameter, chosen by the

UAC.[RFC3261 8.1.1.3]

* Call-ID

- -The Call-ID header field SHOULD be the same in each registration from a UA.[RFC3261 8.1.1.4]
- -All registrations from a UAC SHOULD use the same Call-ID header field value for registrations sent to a particular registrar. [RFC3261 10.2]
- -A UA SHOULD use the same Call-ID for all registrations during a single boot cycle.[RFC3261 10.2.4]

* Contact

- -Contact header field SHALL be set to IP address or FQDN and protected server port value. [TS24.229 5.1.1.4]
- -UACs SHOULD NOT use the "action" parameter.[RFC3261 10.2]
- -Even if the "display-name" is empty, the "name-addr" form MUST be used if the "addr-spec" contains a comma, semicolon, or question mark.[RFC3261 20.10]

* Content-length

-The Content-Length header field value MUST be set to zero. [RFC3261 20.14]

* CSeq

- -The method in the CSeq header field MUST match that of the request. $[RFC3261\ 8.1.1.5]$
- -The sequence number value in the CSeq header field MUST be expressible as a 32-bit unsigned integer. [RFC3261 8.1.1.5] [RFC3261 20.16]
- -The sequence number value in the CSeq header field MUST be less than $2^{**}31$. [RFC3261 8.1.1.5]
- -A UA MUST increment the CSeq value by one for each REGISTER request with the same Call-ID.[RFC3261 10.2]

* Max-Forwards

- -A UAC MUST insert a Max-Forwards header field into each request it originates. [RFC3261 8.1.1.6]
- -The Max-Forwards header field value SHOULD be 70. [RFC3261 8.1.1.6]

* P-Called-Party-ID

-A UAC MUST NOT insert a P-Called-Party-ID header field in any SIP request or response.[RFC3455 4.2.2.1]

* Proxy-Require

-A UAC MUST insert a Proxy-Require header field into the request listing the option tag for that extension. [RFC3261 8.1.1.9]

* Security-Client

- -Security-Client header field SHALL be set to the security mechanism it supports, the IPsec layer algorithms for security and confidentiality protection it supports and the new parameter values needed for the setup of two new pairs of security associations.[TS24.229 5.1.1.4]
- -A client wishing to use the security agreement of this specification MUST add a Security-Client header field to a request addressed to its first-hop proxy.[RFC3329 2.3.1]

* Security-Verify

- -Security-Verify header field SHALL be set to the content of the Security-Server header received in the 401 (Unauthorized) response of the last successful authentication. [TS24.229 5.1.1.4]
- -A subsequent SIP requests MUST contain a Security-Verify header field that mirrors the server's list received previously in the Security- Server header field.[RFC3329 2.3.1]

* Supported

- -The option tag "path" SHALL be contained in Supported header field. [TS24.229 5.1.1.4][RFC3327 5.1]
- -The UA SHOULD include the option tag "path" as a header field value in all Supported header fields.[RFC3327 5.1]
- -The UA SHOULD include a Supported header field in all requests. [RFC3327 5.1]

* To

- -To header field SHALL be set to the SIP URI that contains the public user identity to be registered.[TS24.229 5.1.1.4]
- -A request outside of a dialog MUST NOT contain a To tag. [RFC3261 8.1.1.2]
- -An address-of-record field included in To header field MUST be a SIP URI or SIPS URI.[RFC3261 10.2]

* Via

-The IP address or FQDN of the UE and the protected server port value for the UDP SHALL be included in Via header field..

[TS24.229 5.1.1.4]

- -A UAC MUST insert a Via into that request. [RFC3261 8.1.1.7]
- -The protocol name and protocol version in the Via header field MUST be SIP and 2.0. [RFC3261 8.1.1.7]
- -The Via header field value MUST contain a branch parameter. [RFC3261 8.1.1.7]
- -The branch ID MUST always begin with the characters "z9hG4bK". [RFC3261 8.1.1.7]
- -The client transport MUST insert a value of the "sent-by" field into the Via header field.[RFC3261 18.1.1]
- -The usage of an FQDN in sent-by field is RECOMMENDED. [RFC3261 18.1.1]

- Security Association behavior

- -The reregistration SHALL be sent over the existing set of security associations that is associated with the related contact address. [TS24.229 5.1.1.4]
- -The REGISTER request SHALL be protected using a security association established as a result of an earlier registration.[TS24.229 5.1.1.4]
- -ESP confidentiality SHALL be used in transport mode between UE and P-CSCF.[TS33.203 6.2]
- -ESP integrity SHALL be used in transport mode between UE and P-CSCF. [TS33.203 6.3]
- -A Security-setup-line SHALL be included in REGISTER request in order to start the security mode set-up procedure.[TS33.203 7.2]
- -The integrity and confidentiality of the REGISTER request for authentication and all following SIP messages SHALL be protected. [TS33.203 7.2]
- -The first message in this registration SHOULD be protected with an SA created by a previous successful authentication if one exists. [TS33.203 7.3.1.4]
- -An already active pair of security associations SHALL be used to protect the REGISTER request.[TS33.203 7.4]
- -The REGISTER request SHALL be protected with the old outbound security association if the initial REGISTER request was protected. [TS33.203 7.4.1a]
- -A particular security association SHALL protecte the certain messages in the authentication.[TS33.203 7.4.1a]
- -All the subsequent SIP requests sent by the client to that server SHOULD make use of the security mechanism initiated in the previous

step.[RFC3329 2.3.1]

3.5 generic_de_REGISTER

Generic judgement items for re_REGISTER request.

See generic_sip_message

- -The empty line MUST be present even if the message-body is not.[RFC3261 7]
- -Systems using the Path mechanism SHOULD use appropriate mechanisms to provide message integrity and mutual authentication.[RFC3327 6.1]

- Request-Line

- -Request-URI SHALL be set to the SIP URI of the domain name of the home network.[TS24.229 5.1.1.6]
- -The Request-URI MUST NOT contain unescaped space control characters. [RFC3261 7.1]
- -The Request-URI MUST NOT be enclosed in "<>". [RFC3261 7.1]
- -The "userinfo" and "@" components of the SIP URI MUST NOT be present. $[RFC3261\ 10.2]$

- Header fields

- -Expires header or the expires parameter of the Contact header field SHALL be set to the value of zero.[TS24.229 5.1.1.6]
- -A valid SIP request formulated by a UAC MUST contain To, From, CSeq, Call-ID, Max-Forwards, and Via header fields. [RFC3261 8.1.1]
- -The REGISTER-specific Contact header field value of "*" applies to all registrations, but it MUST NOT be used unless the Expires header field is present with a value of "0".[RFC3261 10.2.2]
- -The client MUST add both a Require and Proxy-Require header field with the value "sec-agree" to its request.[RFC3329 2.3.1]
- -A subsequent SIP requests MUST also have both a Require and Proxy-Require header fields with the value "sec-agree".[RFC3329 2.3.1]

* Authorization

- -The username directive in Authorization header field SHALL be set to the value of the private user identity.[TS24.229 5.1.1.6]
- -The realm directive in Authorization header field SHALL be set to the value as received in the realm directive in the WWW-Authenticate header.[TS24.229 5.1.1.6]
- -The uri directive in Authorization header field SHALL be set to the SIP URI of the domain name of the home network. [TS24.229 5.1.1.6]

- -The nonce directive in Authorization header field SHALL be set to last received nonce value.[TS24.229 5.1.1.6]
- -The response directive in Authorization header field SHALL be set to the last calculated response value.[TS24.229 5.1.1.6]
- -WWW-Authenticate, Authorization, Proxy-Authenticate or Proxy-Authorization MUST NOT be combined into a single header field row. [RFC3261 7.3.1]

* Call-ID

- -The Call-ID header field SHOULD be the same in each registration from a UA.[RFC3261 8.1.1.4]
- -All registrations from a UAC SHOULD use the same Call-ID header field value for registrations sent to a particular registrar. [RFC3261 10.2]

* Contact

- -Contact header field SHALL be set to either the value of "*" or SIP URI(s) that contain(s) in the hostport parameter the IP address of the UE or FQDN and the protected server port value. [TS24.229 5.1.1.6]
- -UACs SHOULD NOT use the "action" parameter.[RFC3261 10.2]
- -Even if the "display-name" is empty, the "name-addr" form MUST be used if the "addr-spec" contains a comma, semicolon, or question mark.[RFC3261 20.10]

* Content-length

-The Content-Length header field value MUST be set to zero. [RFC3261 20.14]

* CSeq

- -The method in the CSeq header field MUST match that of the request. [RFC3261 8.1.1.5]
- -The sequence number value in the CSeq header field MUST be expressible as a 32-bit unsigned integer. [RFC3261 8.1.1.5] [RFC3261 20.16]
- -The sequence number value in the CSeq header field MUST be less than 2**31. [RFC3261 8.1.1.5]
- -A UA MUST increment the CSeq value by one for each REGISTER request with the same Call-ID.[RFC3261 10.2]

* From

-From header field SHALL be set to the SIP URI that contains the public user identity to be registered or deregistered.[TS24.229 5.1.1.6]

-The From field MUST contain a new "tag" parameter, chosen by the UAC.[RFC3261 8.1.1.3]

* Max-Forwards

- -A UAC MUST insert a Max-Forwards header field into each request it originates. [RFC3261 8.1.1.6]
- -The Max-Forwards header field value SHOULD be 70. [RFC3261 8.1.1.6]

* P-Called-Party-ID

-A UAC MUST NOT insert a P-Called-Party-ID header field in any SIP request or response.[RFC3455 4.2.2.1]

* Proxy-Require

-A UAC MUST insert a Proxy-Require header field into the request listing the option tag for that extension. [RFC3261 8.1.1.9]

* Security-Client

- -Security-Client header field SHALL be set to the security mechanism it supports, the IPsec layer algorithms for integrity and confidentiality protection it supports and the new parameter values needed for the setup of two new pairs of security associations.[TS24.229 5.1.1.6]
- -A client wishing to use the security agreement of this specification MUST add a Security-Client header field to a request addressed to its first-hop proxy.[RFC3329 2.3.1]

* Security-Verify

- -Security-Verify header field SHALL be set to the content of the Security-Server header received in the 401 (Unauthorized) response of the last successful authentication. [TS24.229 5.1.1.6]
- -A subsequent SIP requests MUST contain a Security-Verify header field that mirrors the server's list received previously in the Security- Server header field.[RFC3329 2.3.1]

* Supported

- -The UA SHOULD include the option tag "path" as a header field value in all Supported header fields.[RFC3327 5.1]
- -The UA SHOULD include a Supported header field in all requests. [RFC3327 5.1]

* To

- -To header field SHALL be set to the SIP URI that contains the public user identity to be deregistered.[TS24.229 5.1.1.6]
- -A request outside of a dialog MUST NOT contain a To tag. [RFC3261 8.1.1.2]
- -An address-of-record field included in To header field MUST be a SIP URI or SIPS URI.[RFC3261 10.2]

* Via

- -The IP address or FQDN of the UE and the protected server port value for the UDP SHALL be included in Via header field. [TS24.229 5.1.1.6]
- -A UAC MUST insert a Via into that request. [RFC3261 8.1.1.7]
- -The protocol name and protocol version in the Via header field MUST be SIP and 2.0. [RFC3261 8.1.1.7]
- -The Via header field value MUST contain a branch parameter. [RFC3261 8.1.1.7]
- -The branch ID MUST always begin with the characters "z9hG4bK". [RFC3261 8.1.1.7]
- -The client transport MUST insert a value of the "sent-by" field into the Via header field.[RFC3261 18.1.1]
- -The usage of an FQDN in sent-by field is RECOMMENDED. [RFC3261 18.1.1]

- Security Association behavior

- -The REGISTER request SHALL be protected using a security association established as a result of an earlier registration.[TS24.229 5.1.1.6]
- -ESP confidentiality SHALL be used in transport mode between UE and P-CSCF.[TS33.203 6.2]
- -ESP integrity SHALL be used in transport mode between UE and P-CSCF. [TS33.203 6.3]
- -A Security-setup-line SHALL be included in REGISTER request in order to start the security mode set-up procedure.[TS33.203 7.2]
- -The integrity and confidentiality of the REGISTER request for authentication and all following SIP messages SHALL be protected. [TS33.203 7.2]
- -All the subsequent SIP requests sent by the client to that server SHOULD make use of the security mechanism initiated in the previous step.[RFC3329 2.3.1]

3.6 generic_SUBSCRIBE

Generic judgement items for SUBSCRIBE request.

See generic_sip_message

- -The empty line MUST be present even if the message-body is not. [RFC3261 7]
- Request-Line:
 - -Request-URI SHALL be set to the resource to which the UE wants to be subscribed to.[TS24.229 5.1.1.3]
 - -The Request-URI MUST NOT contain unescaped space control characters. [RFC3261 7.1]
 - -The Request-URI MUST NOT be enclosed in "<>". [RFC3261 7.1]
 - -The initial Request-URI of the message SHOULD be set to the value of the URI in the To field.[RFC3261 8.1.1.1]

- Header fields:

- -A valid SIP request formulated by a UAC MUST contain To, From, CSeq, Call-ID, Max-Forwards, and Via header fields. [RFC3261 8.1.1]
- -These requests MUST also have both a Require and Proxy-Require header fields with the value "sec-agree".[RFC3329 2.3.1]

* Allow-Events

-Any node implementing one or more event packages SHOULD include an appropriate "Allow-Events" header indicating all supported events in all methods which initiate dialogs and their responses and OPTIONS responses.[RFC3265 3.3.7]

* Contact

- -Contact header field SHALL be set to IP address or FQDN and protected server port value as in the initial registration. [TS24.229 5.1.1.3]
- -The protected server port SHALL be included in the address in the Contact header field if UE did not insert a GRUU..[TS24.229 5.1.2A.1]
- -The Contact header field MUST be present and contain exactly one SIP or SIPS URI in any request that can result in the establishment of a dialog. [RFC3261 8.1.1.8]
- -UAC MUST provide a SIP or SIPS URI with global scope in the Contact header field of the request.[RFC3261 12.1.2]
- -Even if the "display-name" is empty, the "name-addr" form MUST be used if the "addr-spec" contains a comma, semicolon, or question mark.[RFC3261 20.10]

* Content-length

-The Content-Length header field value MUST be set to zero. [RFC3261 20.14]

* CSea

- -The method in the CSeq header field MUST match that of the request. [RFC3261 8.1.1.5]
- -The sequence number value in the CSeq header field MUST be expressible as a 32-bit unsigned integer. [RFC3261 8.1.1.5] [RFC3261 20.16]
- -The sequence number value in the CSeq header field MUST be less than 2**31. [RFC3261 8.1.1.5]

* Event

- -Event header field SHALL be set to the "reg" event package. [TS24.229 5.1.1.3]
- -Subscribers MUST include exactly one "Event" header in SUBSCRIBE requests, indicating to which event or class of events they are subscribing. [RFC3265 3.1.2]
- -There MUST be exactly one event type listed per event header. [RFC3265 7.2.1]

* Expires

- -Expires header field SHALL be set to 600 000 seconds as the value desired for the duration of the subscription.[TS24.229 5.1.1.3]
- -The SUBSCRIBE requests SHOULD contain an "Expires" header. [RFC3265 3.1.1]

* From

- -From header field SHALL be set to a SIP URI that contains the public user identity used for subscription.[TS24.229 5.1.1.3]
- -The From field MUST contain a new "tag" parameter, chosen by the UAC. [RFC3261 8.1.1.3]

* Max-Forwards

- -A UAC MUST insert a Max-Forwards header field into each request it originates. [RFC3261 8.1.1.6]
- -The Max-Forwards header field value SHOULD be 70.[RFC3261 8.1.1.6]

* P-Called-Party-ID

-A UAC MUST NOT insert a P-Called-Party-ID header field in any SIP

request or response.[RFC3455 4.2.2.1]

* P-Preferred-Identity

- -The P-Preferred-Identity header field SHALL be used as the public user identity for the request if a P-Preferred-Identity was included. [TS24.229 5.1.2A.1]
- -The default public user identity for the security association SHALL be used as the public user identity for the request if no P-Preferred-Identity was included.[TS24.229 5.1.2A.1]

* Proxy-Require

-A UAC MUST insert a Proxy-Require header field into the request listing the option tag for that extension. [RFC3261 8.1.1.9]

* Route

- -A proper preloaded Route header value SHALL be built in Route header for all new dialogs and standalone transactions.[TS24.229 5.1.2A.1]
- -A list of Route header values made out of the P-CSCF URI and the values received in the Service-Route header saved from the 200 (OK) response to the last registration SHALL be built in Route header.[TS24.229 5.1.2A.1]
- -If the request contains a Route header field, the request SHOULD be sent to the locations derived from its topmost value.[RFC3261 8.1.2]

* Security-Verify

- -All the subsequent SIP requests sent by the client to that server SHOULD make use of the security mechanism initiated in the previous step. [RFC3329 2.3.1]
- -These requests MUST contain a Security-Verify header field that mirrors the server's list received previously in the Security- Server header field. [RFC3329 2.3.1]

* To

- -To header field SHALL be set to a SIP URI that contains the public user identity used for subscription.[TS24.229 5.1.1.3]
- -A request outside of a dialog MUST NOT contain a To tag; the tag in the To field of a request identifies the peer of the dialog. [RFC3261 8.1.1.2]

* Via

- -The protected server port SHALL be included in the Via header entry relating to the UE.[TS24.229 5.1.2A.1]
- -A UAC MUST insert a Via into that request. [RFC3261 8.1.1.7]
- -The protocol name and protocol version in the Via header field MUST be

- SIP and 2.0. [RFC3261 8.1.1.7]
- -The Via header field value MUST contain a branch parameter. [RFC3261 8.1.1.7]
- -The branch ID MUST always begin with the characters "z9hG4bK". [RFC3261 8.1.1.7]
- -The client transport MUST insert a value of the "sent-by" field into the Via header field.[RFC3261 18.1.1]
- -The usage of an FQDN in sent-by field is RECOMMENDED. [RFC3261 18.1.1]

3.7 generic_re_SUBSCRIBE

Generic judgement items for Re-SUBSCRIBE request.

See generic_sip_message

- -The information for the established dialog and the expiration time as indicated in the Expires header field of the received response SHALL be stored by UE. [TS24.229 5.1.1.3]
- -The empty line MUST be present even if the message-body is not.[RFC3261 7]
- Request-Line:
 - -The Request-URI MUST NOT contain unescaped space control characters. [RFC3261 7.1]
 - -The Request-URI MUST NOT be enclosed in "<>". [RFC3261 7.1]
 - -The UAC MUST place the remote target URI into the Request-URI if the route set is not empty and the first URI in the route set contains the lr parameter.[RFC3261 12.2.1.1]
- Header fields:
 - -A valid SIP request formulated by a UAC MUST contain To, From, CSeq, Call-ID, Max-Forwards, and Via header fields. [RFC3261 8.1.1]
 - -A subsequent SIP requests MUST also have both a Require and Proxy-Require header fields with the value "sec-agree".[RFC3329 2.3.1]
 - * Allow-Events
 - -Any node implementing one or more event packages SHOULD include an appropriate "Allow-Events" header indicating all supported events in all methods which initiate dialogs and their responses and OPTIONS responses.[RFC3265 3.3.7]
 - * Call-ID

- -The Call-ID header field MUST be the same for all requests and responses sent by either UA in a dialog.[RFC3261 8.1.1.4]
- -The Call-ID of the request MUST be set to the Call-ID of the dialog. [RFC3261 12.2.1.1]

* Contact

- -The protected server port SHALL be included in the address in the Contact header field if UE did not insert a GRUU..[TS24.229 5.1.2A.1]
- -Even if the "display-name" is empty, the "name-addr" form MUST be used if the "addr-spec" contains a comma, semicolon, or question mark. [RFC3261 20.10]

* Content-length

-The Content-Length header field value MUST be set to zero. [RFC3261 20.14]

* CSeq

- -The method in the CSeq header field MUST match that of the request. [RFC3261 8.1.1.5]
- -The sequence number value in the CSeq header field MUST be expressible as a 32-bit unsigned integer.[RFC3261 8.1.1.5] [RFC3261 20.16]
- -The sequence number value in the CSeq header field MUST be less than 2**31.[RFC3261 8.1.1.5]
- -Requests within a dialog MUST contain strictly monotonically increasing and contiguous CSeq sequence numbers in each direction.

 [RFC3261 12.2.1.1]
- -The value of the local sequence number MUST be incremented by one if the local sequence number is not empty.[RFC3261 12.2.1.1]
- -The value of the local sequence number MUST be placed into the CSeq header field if the local sequence number is not empty.[RFC3261 12.2.1.1]
- -The method field in the CSeq header field value MUST match the method of the request.[RFC3261 12.2.1.1]

* Event

- -Subscribers MUST include exactly one "Event" header in SUBSCRIBE requests, indicating to which event or class of events they are subscribing.[RFC3265 3.1.2]
- -There MUST be exactly one event type listed per event header. [RFC3265 7.2.1]

* Expires

-The SUBSCRIBE requests SHOULD contain an "Expires" header. [RFC3265 3.1.1]

* From

- -The From URI of the request MUST be set to the local URI from the dialog state.[RFC3261 12.2.1.1]
- -The tag in the From header field of the request MUST be set to the local tag of the dialog ID.[RFC3261 12.2.1.1]

* Max-Forwards

- -A UAC MUST insert a Max-Forwards header field into each request it originates. [RFC3261 8.1.1.6]
- -The Max-Forwards header field value SHOULD be 70. [RFC3261 8.1.1.6]

* P-Called-Party-ID

-A UAC MUST NOT insert a P-Called-Party-ID header field in any SIP request or response.[RFC3455 4.2.2.1]

* Proxy-Require

-A UAC MUST insert a Proxy-Require header field into the request listing the option tag for that extension. [RFC3261 8.1.1.9]

* Route

- -If the request contains a Route header field, the request SHOULD be sent to the locations derived from its topmost value. [RFC3261 8.1.2]
- -The UAC MUST NOT add a Route header field to the request. [RFC3261 12.2.1.1]
- -The UAC MUST include a Route header field containing the route set values in order including all parameters if the route set is not empty, and the first URI in the route set contains the lr parameter.[RFC3261 12.2.1.1]

* Security-Verify

- -All the subsequent SIP requests sent by the client to that server SHOULD make use of the security mechanism initiated in the previous step.[RFC3329 2.3.1]
- -A subsequent SIP requests MUST contain a Security-Verify header field that mirrors the server's list received previously in the Security- Server header field.[RFC3329 2.3.1]

* To

- -The URI in the To field of the request MUST be set to the remote URI from the dialog state.[RFC3261 12.2.1.1]
- -The tag in the To header field of the request MUST be set to the remote tag of the dialog ID.[RFC3261 12.2.1.1]

* Via

- -The protected server port SHALL be included in the Via header entry relating to the UE.[TS24.229 5.1.2A.1]
- -A UAC MUST insert a Via into that request. [RFC3261 8.1.1.7]
- -The protocol name and protocol version in the Via header field MUST be SIP and 2.0.[RFC3261 8.1.1.7]
- -The Via header field value MUST contain a branch parameter. [RFC3261 8.1.1.7]
- -The branch ID MUST always begin with the characters "z9hG4bK". [RFC3261 8.1.1.7]
- -The client transport MUST insert a value of the "sent-by" field into the Via header field.[RFC3261 18.1.1]
- -The usage of an FQDN in sent-by field is RECOMMENDED. [RFC3261 18.1.1]

3.8 generic_200-NOTIFY

Generic judgement items for 200-NOTIFY response.

See generic_sip_message

- -The empty line MUST be present even if the message-body is not. [RFC3261 7]
- -TUs SHOULD respond immediately to non-INVITE requests.[RFC3261 17.1]
- Header fields:
 - * Call-ID
 - -The Call-ID header field MUST be the same for all requests and responses sent by either UA in a dialog.[RFC3261 8.1.1.4]
 - -The Call-ID header field of the response MUST equal the Call-ID header field of the request.[RFC3261 8.2.6.2]
 - * Content-length
 - -The Content-Length header field value MUST be set to zero. [RFC3261 20.14]
 - * CSeq

-The CSeq header field of the response MUST equal the CSeq field of the request.[RFC3261 8.2.6.2]

* From

-The From field of the response MUST equal the From header field of the request.[RFC3261 8.2.6.2]

* P-Called-Party-ID

-A UAC MUST NOT insert a P-Called-Party-ID header field in any SIP request or response.[RFC3455 4.2.2.1]

* To

-If a request contained a To tag in the request, the To header field in the response MUST equal that of the request.[RFC3261 8.2.6.2]

* Via

- -The Via header field values in the response MUST equal the Via header field values in the request.[RFC3261 8.2.6.2]
- -The Via header field values in the response MUST maintain the same ordering. [RFC3261 8.2.6.2]
- -If the host portion of the "sent-by" parameter contains a domain name, or if it contains an IP address that differs from the packet source address, the server MUST add a "received" parameter to that Via header field value.[RFC3261 18.2.1]
- -The "sent-by" parameter MUST contain the source address from which the packet was received.[RFC3261 18.2.1]
- -The response MUST be sent to the address in the "received" parameter, using the port indicated in the "sent-by" value, or using port 5060 if none is specified explicitly.[RFC3261 18.2.2]

3.9 generic_INVITE

Generic judgement items for INVITE request.

See generic_sip_message

- Request-Line:
 - -The Request-URI MUST NOT contain unescaped space control characters. [RFC3261 7.1]
 - -The Request-URI MUST NOT be enclosed in "<>". [RFC3261 7.1]
 - -The initial Request-URI of the message SHOULD be set to the value of the URI in the To field.[RFC3261 8.1.1.1]

- Header fields:

- -A valid SIP request formulated by a UAC MUST contain To, From, CSeq, Call-ID, Max-Forwards, and Via header fields. [RFC3261 8.1.1]
- -These requests MUST also have both a Require and Proxy-Require header fields with the value "sec-agree".[RFC3329 2.3.1]

* Allow

- -A UA that supports INVITE MUST also support ACK, CANCEL and BYE. [RFC3261 13.1]
- -An Allow header field SHOULD be present in the INVITE. [RFC3261 13.2.1]

* Allow-Events

-Any node implementing one or more event packages SHOULD include an appropriate "Allow-Events" header indicating all supported events in all methods which initiate dialogs and their responses and OPTIONS responses.[RFC3265 3.3.7]

* Contact

- -The protected server port SHALL be included in the address in the Contact header field if UE did not insert a GRUU..[TS24.229 5.1.2A.1]
- -The Contact header field MUST be present and contain exactly one SIP or SIPS URI in any request that can result in the establishment of a dialog. [RFC3261 8.1.1.8]
- -UAC MUST provide a SIP or SIPS URI with global scope in the Contact header field of the request.[RFC3261 12.1.2]
- -Even if the "display-name" is empty, the "name-addr" form MUST be used if the "addr-spec" contains a comma, semicolon, or question mark.[RFC3261 20.10]

* Content-Encoding

-If the body has not undergone any encoding such as compression, then Content-Encoding MUST be omitted. [RFC3261 7.4.1]

* Content-Type

- -The Internet media type of the message body MUST be given by the Content-Type header field.[RFC3261 7.4.1]
- -The Content-Type header field MUST be present if the body is not empty. [RFC3261 20.15]

* CSeq

-The method in the CSeq header field MUST match that of the request.

[RFC3261 8.1.1.5]

- -The sequence number value in the CSeq header field MUST be expressible as a 32-bit unsigned integer. [RFC3261 8.1.1.5] [RFC3261 20.16]
- -The sequence number value in the CSeq header field MUST be less than 2**31. [RFC3261 8.1.1.5]

* From

-The From field MUST contain a new "tag" parameter, chosen by the UAC. [RFC3261 8.1.1.3]

* Max-Forwards

- -A UAC MUST insert a Max-Forwards header field into each request it originates. [RFC3261 8.1.1.6]
- -The Max-Forwards header field value SHOULD be 70.[RFC3261 8.1.1.6]

* P-Called-Party-ID

-A UAC MUST NOT insert a P-Called-Party-ID header field in any SIP request or response.[RFC3455 4.2.2.1]

* Route

- -A proper preloaded Route header value SHALL be built in Route header for all new dialogs and standalone transactions.[TS24.229 5.1.2A.1]
- -A list of Route header values made out of the P-CSCF URI and the values received in the Service-Route header saved from the 200 (OK) response to the last registration SHALL be built in Route header.[TS24.229 5.1.2A.1]
- -If the request contains a Route header field, the request SHOULD be sent to the locations derived from its topmost value.[RFC3261 8.1.2]

* P-Preferred-Identity

- -The P-Preferred-Identity header field SHALL be used as the public user identity for the request if a P-Preferred-Identity was included. [TS24.229 5.1.2A.1]
- -The default public user identity for the security association SHALL be used as the public user identity for the request if no P-Preferred-Identity was included.[TS24.229 5.1.2A.1]

* Proxy-Require

-A UAC MUST insert a Proxy-Require header field into the request listing the option tag for that extension. [RFC3261 8.1.1.9]

* Security-Verify

- -All the subsequent SIP requests sent by the client to that server SHOULD make use of the security mechanism initiated in the previous step. [RFC3329 2.3.1]
- -These requests MUST contain a Security-Verify header field that mirrors the server's list received previously in the Security- Server header field. [RFC3329 2.3.1]

* Supported

-A Supported header field SHOULD be present in the INVITE. [RFC3261 13.2.1]

* To

-A request outside of a dialog MUST NOT contain a To tag; the tag in the To field of a request identifies the peer of the dialog. [RFC3261 8.1.1.2]

* Via

- -The protected server port SHALL be included in the Via header entry relating to the UE.[TS24.229 5.1.2A.1]
- -A UAC MUST insert a Via into that request. [RFC3261 8.1.1.7]
- -The protocol name and protocol version in the Via header field MUST be SIP and 2.0. [RFC3261 8.1.1.7]
- -The Via header field value MUST contain a branch parameter. [RFC3261 8.1.1.7]
- -The branch ID MUST always begin with the characters "z9hG4bK". [RFC3261 8.1.1.7]
- -The client transport MUST insert a value of the "sent-by" field into the Via header field.[RFC3261 18.1.1]
- -The usage of an FQDN in sent-by field is RECOMMENDED. [RFC3261 18.1.1]

- Bodies fields:

- -The SDP payloads SHALL not be encrypted.[TS24.229 6.1.1]
- -Only SDP payload SHALL be contained in SIP messages when the SDP payload must be included in the message.[TS24.229 6.1.1]
- -A SDP offer and at least one media description SHALL be contained in an INVITE request generated by a UE.[TS24.229 6.1.2]
- -The Session Description Protocol MUST be supported by all user agents as a means to describe sessions.[RFC3261 13.2.1]
- -Whitespace MUST NOT be used on either side of the "=" sign. [RFC4566 5]
- -v,o,s,(c),t,m,(c) lines are REQUIRED in the SDP message.
- (c line MUST included session level information or all of media information) [RFC4566 5]

-all MUST appear in exactly the following order: $"v,o,s,(i),(u),(e),(p),(c),(b),t,(r),(z),(k),(a),m,(i),(c),(b),(k),(a)" \\ (the line enclosed in "()" is OPTIONAL)[RFC4566 5]$

* o line

-For both IP4 and IP6, the fully qualified domain name is the form that SHOULD be given unless this is unavailable, in which case the globally unique address MAY be substituted.[RFC4566 5.2]

* s line

- -There MUST be one and only one "s=" field per session description. [RFC4566 5.3]
- -The "s=" field MUST NOT be empty. [RFC4566 5.3]
- -If a session has no meaningful name, the value "s= " SHOULD be used. [RFC4566 5.3]

* c line

- -A session description MUST contain either at least one "c=" field in each media description or a single "c=" field at the session level. $[RFC4566\ 5.7]$
- -A session-level "c=" field MUST NOT specify Multiple addresses or "c=" lines.[RFC4566 5.7]
- -The slash notation for multiple addresses MUST NOT be used for IP unicast addresses on a media-leve.[RFC4566 5.7]

* b line

-The proposed bandwidth for each media stream utilizing the ""b="" media descriptor and the ""AS"" bandwidth modifier in the SDP SHALL be specified for ""video"" and ""audio"" media types that utilize the RTP/RTCP.[TS24.229 6.1.1]

3.10 generic_180-INVITE

Generic judgement items for 180-INVITE response.

9. generic_180-INVITE

- -The empty line MUST be present even if the message-body is not. [RFC3261 7]
- Header fields:
 - * Call-ID

-The Call-ID header field of the response MUST equal the Call-ID header field of the request.[RFC3261 8.2.6.2]

* Content-length

-The Content-Length header field value MUST be set to zero. [RFC3261 20.14]

* CSeq

-The CSeq header field of the response MUST equal the CSeq field of the request.[RFC3261 8.2.6.2]

* From

-The From field of the response MUST equal the From header field of the request.[RFC3261 8.2.6.2]

* P-Called-Party-ID

-A UAC MUST NOT insert a P-Called-Party-ID header field in any SIP request or response.[RFC3455 4.2.2.1]

* To

- -If the To header field in the request did not contain a tag, the URI in the To header field in the response MUST equal the URI in the To header field. [RFC3261 8.2.6.2]
- -If the To header field in the request did not contain a tag, the UAS MUST add a tag to the To header field in the response. [RFC3261 8.2.6.2]

* Via

- -The Via header field values in the response MUST equal the Via header field values in the request.[RFC3261 8.2.6.2]
- -The Via header field values in the response MUST maintain the same ordering. [RFC3261 8.2.6.2]
- -If the host portion of the "sent-by" parameter contains a domain name, or if it contains an IP address that differs from the packet source address, the server MUST add a "received" parameter to that Via header field value.[RFC3261 18.2.1]
- -The "sent-by" parameter MUST contain the source address from which the packet was received.[RFC3261 18.2.1]
- -The response MUST be sent to the address in the "received" parameter, using the port indicated in the "sent-by" value, or using port 5060 if none is specified explicitly.[RFC3261 18.2.2]

3.11 generic_200-INVITE

Generic judgement items for 200-INVITE response.

See generic_sip_message

- Header fields:

-A 2xx response to an INVITE SHOULD contain the Allow header field and the Supported header field.[RFC3261 13.3.1.4]

* Allow

-A UA that supports INVITE MUST also support ACK, CANCEL and BYE. [RFC3261 13.1]

* Allow-Events

-Any node implementing one or more event packages SHOULD include an appropriate "Allow-Events" header indicating all supported events in all methods which initiate dialogs and their responses and OPTIONS responses.[RFC3265 3.3.7]

* Call-ID

- -The Call-ID header field MUST be the same for all requests and responses sent by either UA in a dialog.[RFC3261 8.1.1.4]
- -The Call-ID header field of the response MUST equal the Call-ID header field of the request.[RFC3261 8.2.6.2]

* Contact

- The protected server port SHALL be included in the address in the Contact header field if UE did not insert a GRUU. [TS24.229 5.1.2A.2]
- -The UAS MUST add a Contact header field to the response. [RFC3261 12.1.1]
- -The URI provided in the Contact header field MUST be a SIP or SIPS URI.[RFC3261 12.1.1]
- -Even if the "display-name" is empty, the "name-addr" form MUST be used if the "addr-spec" contains a comma, semicolon, or question mark.[RFC3261 20.10]

* Content-Encoding

-If the body has not undergone any encoding such as compression, then Content-Encoding MUST be omitted. [RFC3261 7.4.1]

* Content-Type

-The Internet media type of the message body MUST be given by the

Content-Type header field.[RFC3261 7.4.1]

-The Content-Type header field MUST be present if the body is not empty. $[RFC3261\ 20.15]$

* CSeq

-The CSeq header field of the response MUST equal the CSeq field of the request.[RFC3261 8.2.6.2]

* From

-The From field of the response MUST equal the From header field of the request.[RFC3261 8.2.6.2]

* P-Called-Party-ID

-A UAC MUST NOT insert a P-Called-Party-ID header field in any SIP request or response.[RFC3455 4.2.2.1]

* Record-Route

- -When a UAS responds to a request with a response that establishes a dialog, the UAS MUST copy all Record-Route header field values from the request into the response. [RFC3261 12.1.1]
- -Record-Route header field values MUST maintain the order of Record-Route values from the request. [RFC3261 12.1.1]

* To

- -If the To header field in the request did not contain a tag, the URI in the To header field in the response MUST equal the URI in the To header field. [RFC3261 8.2.6.2]
- -If the To header field in the request did not contain a tag, the UAS MUST add a tag to the To header field in the response. [RFC3261 8.2.6.2]
- -The same tag MUST be used for all responses to that request, both final and provisional. [RFC3261 8.2.6.2]

* Via

- -The Via header field values in the response MUST equal the Via header field values in the request.[RFC3261 8.2.6.2]
- -The Via header field values in the response MUST maintain the same ordering. [RFC3261 8.2.6.2]
- -If the host portion of the "sent-by" parameter contains a domain name, or if it contains an IP address that differs from the packet source address, the server MUST add a "received" parameter to that Via header field value.[RFC3261 18.2.1]
- -The "sent-by" parameter MUST contain the source address from which the packet was received.[RFC3261 18.2.1]

-The response MUST be sent to the address in the "received" parameter, using the port indicated in the "sent-by" value, or using port 5060 if none is specified explicitly.[RFC3261 18.2.2]

- Bodies fields:

- -The SDP payloads SHALL not be encrypted.[TS24.229 6.1.1]
- -Only SDP payload SHALL be contained in SIP messages when the SDP payload must be included in the message.[TS24.229 6.1.1]
- -The answer MUST be in a reliable non-failure message from UAS back to UAC which is correlated to that INVITE if the initial offer is in an INVITE. [RFC3261 13.2.1]
- -The Session Description Protocol MUST be supported by all user agents as a means to describe sessions.[RFC3261 13.2.1]
- -The 2xx MUST contain an answer if the INVITE request contained an offer and the UAS had not yet sent an answer.[RFC3261 13.3.1.4]
- -Whitespace MUST NOT be used on either side of the "=" sign. [RFC4566 5]
- -v,o,s,(c),t,m,(c) lines are REQUIRED in the SDP message.(c line MUST included session level information or all of media information)[RFC4566 5]
- -all MUST appear in exactly the following order:

 "v,o,s,(i),(u),(e),(p),(c),(b),t,(r),(z),(k),(a),m,(i),(c),(b),(k),(a)"

 (the line enclosed in "()" is OPTIONAL)[RFC4566 5]

* o line

-For both IP4 and IP6, the fully qualified domain name is the form that SHOULD be given unless this is unavailable, in which case the globally unique address MAY be substituted.[RFC4566 5.2]

* s line

- -There MUST be one and only one "s=" field per session description. [RFC4566 5.3]
- -The "s=" field MUST NOT be empty. [RFC4566 5.3]
- -If a session has no meaningful name, the value "s= " SHOULD be used. [RFC4566 5.3]

* c line

- -A session description MUST contain either at least one "c=" field in each media description or a single "c=" field at the session level. [RFC4566 5.7]
- -A session-level "c=" field MUST NOT specify Multiple addresses or "c=" lines.[RFC4566 5.7]
- -The slash notation for multiple addresses MUST NOT be used for IP unicast addresses on a media-leve.[RFC4566 5.7]

* b line

-The proposed bandwidth for each media stream utilizing the ""b="" media descriptor and the ""AS"" bandwidth modifier in the SDP SHALL be specified for ""video"" and ""audio"" media types that utilize the RTP/RTCP.[TS24.229 6.1.1]

3.12 generic_ACK

Generic judgement items for ACK request.

- -The empty line MUST be present even if the message-body is not. [RFC3261 7]
- Request-Line:
 - -The Request-URI MUST NOT contain unescaped space control characters. [RFC3261 7.1]
 - -The Request-URI MUST NOT be enclosed in "<>". [RFC3261 7.1]
 - -The UAC MUST place the remote target URI into the Request-URI if the route set is not empty and the first URI in the route set contains the lr parameter. [RFC3261 12.2.1.1]
 - Header fields:
 - -A valid SIP request formulated by a UAC MUST contain To, From, CSeq, Call-ID, Max-Forwards, and Via header fields. [RFC3261 8.1.1]
 - * Call-ID
 - -The Call-ID header field MUST be the same for all requests and responses sent by either UA in a dialog.[RFC3261 8.1.1.4]
 - -The Call-ID of the request MUST be set to the Call-ID of the dialog. [RFC3261 12.2.1.1]
 - * Content-length
 - -The Content-Length header field value MUST be set to zero. [RFC3261 20.14]
 - * CSeq
 - -The method in the CSeq header field MUST match that of the request. [RFC3261 8.1.1.5]
 - -The sequence number value in the CSeq header field MUST be expressible as a 32-bit unsigned integer. [RFC3261 8.1.1.5] [RFC3261 20.16]

- -The sequence number value in the CSeq header field MUST be less than 2**31. [RFC3261 8.1.1.5]
- -Requests within a dialog MUST contain strictly monotonically increasing and contiguous CSeq sequence numbers in each direction. [RFC3261 12.2.1.1]
- -The value of the local sequence number MUST be incremented by one if the local sequence number is not empty.[RFC3261 12.2.1.1]
- -The value of the local sequence number MUST be placed into the CSeq header field if the local sequence number is not empty.[RFC3261 12.2.1.1]
- -The method field in the CSeq header field value MUST match the method of the request.[RFC3261 12.2.1.1]

* From

- -The From URI of the request MUST be set to the local URI from the dialog state.[RFC3261 12.2.1.1]
- -The tag in the From header field of the request MUST be set to the local tag of the dialog ID.[RFC3261 12.2.1.1]

* Max-Forwards

- -A UAC MUST insert a Max-Forwards header field into each request it originates. [RFC3261 8.1.1.6]
- -The Max-Forwards header field value SHOULD be 70.[RFC3261 8.1.1.6]

* P-Called-Party-ID

-A UAC MUST NOT insert a P-Called-Party-ID header field in any SIP request or response.[RFC3455 4.2.2.1]

* Route

- -If the request contains a Route header field, the request SHOULD be sent to the locations derived from its topmost value.[RFC3261 8.1.2]
- -The UAC MUST NOT add a Route header field to the request. [RFC3261 12.2.1.1]
- -The UAC MUST include a Route header field containing the route set values in order including all parameters if the route set is not empty, and the first URI in the route set contains the lr parameter. [RFC3261 12.2.1.1]

* To

- -The URI in the To field of the request MUST be set to the remote URI from the dialog state.[RFC3261 12.2.1.1]
- -The tag in the To header field of the request MUST be set to the remote tag of the dialog ID.[RFC3261 12.2.1.1]

* Via

- -The protected server port SHALL be included in the Via header entry relating to the UE.[TS24.229 5.1.2A.1]
- -A UAC MUST insert a Via into that request. [RFC3261 8.1.1.7]
- -The protocol name and protocol version in the Via header field MUST be SIP and 2.0. [RFC3261 8.1.1.7]
- -The Via header field value MUST contain a branch parameter. [RFC3261 8.1.1.7]
- -The branch ID MUST always begin with the characters "z9hG4bK". [RFC3261 8.1.1.7]
- -The client transport MUST insert a value of the "sent-by" field into the Via header field.[RFC3261 18.1.1]
- -The usage of an FQDN in sent-by field is RECOMMENDED. [RFC3261 18.1.1]

3.13 generic_BYE

Generic judgement items for BYE request.

- -The empty line MUST be present even if the message-body is not. [RFC3261 7]
- Request-Line:
 - -The Request-URI MUST NOT contain unescaped space control characters. [RFC3261 7.1]
 - -The Request-URI MUST NOT be enclosed in "<>". [RFC3261 7.1]
 - -The UAC MUST place the remote target URI into the Request-URI if the route set is not empty and the first URI in the route set contains the lr parameter. [RFC3261 12.2.1.1]
- Header fields:
 - -A valid SIP request formulated by a UAC MUST contain To, From, CSeq, Call-ID, Max-Forwards, and Via header fields. [RFC3261 8.1.1]
 - -These requests MUST also have both a Require and Proxy-Require header fields with the value "sec-agree".[RFC3329 2.3.1]
 - * Call-ID
 - -The Call-ID header field MUST be the same for all requests and responses sent by either UA in a dialog.[RFC3261 8.1.1.4]
 - -The Call-ID of the request MUST be set to the Call-ID of the dialog. [RFC3261 12.2.1.1]

* Content-length

-The Content-Length header field value MUST be set to zero. [RFC3261 20.14]

* CSeq

- -The method in the CSeq header field MUST match that of the request. [RFC3261 8.1.1.5]
- -The sequence number value in the CSeq header field MUST be expressible as a 32-bit unsigned integer. [RFC3261 8.1.1.5] [RFC3261 20.16]
- -The sequence number value in the CSeq header field MUST be less than 2**31. [RFC3261 8.1.1.5]
- -Requests within a dialog MUST contain strictly monotonically increasing and contiguous CSeq sequence numbers in each direction. [RFC3261 12.2.1.1]
- -The value of the local sequence number MUST be incremented by one if the local sequence number is not empty.[RFC3261 12.2.1.1]
- -The value of the local sequence number MUST be placed into the CSeq header field if the local sequence number is not empty.[RFC3261 12.2.1.1]
- -The method field in the CSeq header field value MUST match the method of the request.[RFC3261 12.2.1.1]

* From

- -The From URI of the request MUST be set to the local URI from the dialog state.[RFC3261 12.2.1.1]
- -The tag in the From header field of the request MUST be set to the local tag of the dialog ID.[RFC3261 12.2.1.1]

* Max-Forwards

- -A UAC MUST insert a Max-Forwards header field into each request it originates. [RFC3261 8.1.1.6]
- -The Max-Forwards header field value SHOULD be 70.[RFC3261 8.1.1.6]

* P-Called-Party-ID

-A UAC MUST NOT insert a P-Called-Party-ID header field in any SIP request or response.[RFC3455 4.2.2.1]

* Route

- -If the request contains a Route header field, the request SHOULD be sent to the locations derived from its topmost value.[RFC3261 8.1.2]
- -The UAC MUST NOT add a Route header field to the request. [RFC3261 12.2.1.1]
- -The UAC MUST include a Route header field containing the route set

values in order including all parameters if the route set is not empty, and the first URI in the route set contains the lr parameter. [RFC3261 12.2.1.1]

* Proxy-Require

-A UAC MUST insert a Proxy-Require header field into the request listing the option tag for that extension. [RFC3261 8.1.1.9]

* Security-Verify

- -All the subsequent SIP requests sent by the client to that server SHOULD make use of the security mechanism initiated in the previous step. [RFC3329 2.3.1]
- -These requests MUST contain a Security-Verify header field that mirrors the server's list received previously in the Security-Server header field. [RFC3329 2.3.1]

* To

- -The URI in the To field of the request MUST be set to the remote URI from the dialog state.[RFC3261 12.2.1.1]
- -The tag in the To header field of the request MUST be set to the remote tag of the dialog ID.[RFC3261 12.2.1.1]

* Via

- -The protected server port SHALL be included in the Via header entry relating to the UE.[TS24.229 5.1.2A.1]
- -A UAC MUST insert a Via into that request. [RFC3261 8.1.1.7]
- -The protocol name and protocol version in the Via header field MUST be SIP and 2.0. [RFC3261 8.1.1.7]
- -The Via header field value MUST contain a branch parameter. [RFC3261 8.1.1.7]
- -The branch ID MUST always begin with the characters "z9hG4bK". [RFC3261 8.1.1.7]
- -The client transport MUST insert a value of the "sent-by" field into the Via header field.[RFC3261 18.1.1]
- -The usage of an FQDN in sent-by field is RECOMMENDED. [RFC3261 18.1.1]

3.14 generic_200-BYE

Generic judgement items for 200-BYE response.

- -The empty line MUST be present even if the message-body is not. [RFC3261 7]
- -TUs SHOULD respond immediately to non-INVITE requests.[RFC3261 17.1]

- Header fields:

- * Call-ID
 - -The Call-ID header field MUST be the same for all requests and responses sent by either UA in a dialog.[RFC3261 8.1.1.4]
 - -The Call-ID header field of the response MUST equal the Call-ID header field of the request.[RFC3261 8.2.6.2]

* Content-length

-The Content-Length header field value MUST be set to zero. [RFC3261 20.14]

* CSeq

-The CSeq header field of the response MUST equal the CSeq field of the request.[RFC3261 8.2.6.2]

* From

-The From field of the response MUST equal the From header field of the request.[RFC3261 8.2.6.2]

* P-Called-Party-ID

-A UAC MUST NOT insert a P-Called-Party-ID header field in any SIP request or response.[RFC3455 4.2.2.1]

* To

- -If a request contained a To tag in the request, the To header field in the response MUST equal that of the request.[RFC3261 8.2.6.2]
- -The same tag MUST be used for all responses to that request, both final and provisional. [RFC3261 8.2.6.2]

* Via

- -The Via header field values in the response MUST equal the Via header field values in the request.[RFC3261 8.2.6.2]
- -The Via header field values in the response MUST maintain the same ordering. [RFC3261 8.2.6.2]
- -If the host portion of the "sent-by" parameter contains a domain name, or if it contains an IP address that differs from the packet source address, the server MUST add a "received" parameter to that Via header field value.[RFC3261 18.2.1]
- -The "sent-by" parameter MUST contain the source address from which the packet was received.[RFC3261 18.2.1]

-The response MUST be sent to the address in the "received" parameter, using the port indicated in the "sent-by" value, or using port 5060 if none is specified explicitly.[RFC3261 18.2.2]

3.15 generic_CANCEL

Generic judgement items for CANCEL request.

- -The empty line MUST be present even if the message-body is not. [RFC3261 7]
- -The Request-URI, Call-ID, To, the numeric part of CSeq, and From header fields in the CANCEL request MUST be identical to those in the request being cancelled, including tags.[RFC3261 9.1]
- -The destination address, port, and transport for the CANCEL MUST be identical to those used to send the original request.[RFC3261 9.1]
- Request-Line:
 - -The Request-URI MUST NOT contain unescaped space control characters. [RFC3261 7.1]
 - -The Request-URI MUST NOT be enclosed in "<>". [RFC3261 7.1]
- Header fields:
 - -A valid SIP request formulated by a UAC MUST contain To, From, CSeq, Call-ID, Max-Forwards, and Via header fields. [RFC3261 8.1.1]
 - -Require and Proxy-Require MUST NOT be used in a SIP CANCEL request, or in an ACK request sent for a non-2xx response. [RFC3261 8.2.2.3] [RFC3261 9.1]
 - * Content-length
 - -The Content-Length header field value MUST be set to zero. [RFC3261 20.14]
 - * CSeq
 - -The sequence number value in the CSeq header field MUST be expressible as a 32-bit unsigned integer. [RFC3261 8.1.1.5] [RFC3261 20.16]
 - -The sequence number value in the CSeq header field MUST be less than 2**31. [RFC3261 8.1.1.5]
 - -The method part of the CSeq header field MUST have a value of CANCEL. [RFC3261 9.1]
 - * Max-Forwards

- -A UAC MUST insert a Max-Forwards header field into each request it originates.[RFC3261 8.1.1.6]
- -The Max-Forwards header field value SHOULD be 70.[RFC3261 8.1.1.6]
- * P-Called-Party-ID
 - -A UAC MUST NOT insert a P-Called-Party-ID header field in any SIP request or response.[RFC3455 4.2.2.1]
- * Route
 - -If the request being cancelled contains a Route header field, the CANCEL request MUST include that Route header field's values.[RFC3261 9.1]
- * Via
 - -A UAC MUST insert a Via into that request. [RFC3261 8.1.1.7]
 - -The protocol name and protocol version in the Via header field MUST be SIPand 2.0. [RFC3261 8.1.1.7]
 - -The Via header field value MUST contain a branch parameter. [RFC3261 8.1.1.7]
 - -The branch ID MUST always begin with the characters "z9hG4bK". [RFC3261 8.1.1.7]
 - -A CANCEL constructed by a client MUST have only a single Via header field value matching the top Via value in the request being cancelled.[RFC3261 9.1]

3.16 generic_200-CANCEL

Generic judgement items for 200-CANCEL response.

- -The empty line MUST be present even if the message-body is not. [RFC3261 7]
- -TUs SHOULD respond immediately to non-INVITE requests.[RFC3261 17.1]
- Header fields:
 - * Call-ID
 - -The Call-ID header field of the response MUST equal the Call-ID header field of the request.[RFC3261 8.2.6.2]
 - * Content-length
 - -The Content-Length header field value MUST be set to zero. [RFC3261 20.14]
 - * CSeq

-The CSeq header field of the response MUST equal the CSeq field of the request.[RFC3261 8.2.6.2]

* From

-The From field of the response MUST equal the From header field of the request.[RFC3261 8.2.6.2]

* P-Called-Party-ID

-A UAC MUST NOT insert a P-Called-Party-ID header field in any SIP request or response.[RFC3455 4.2.2.1]

* To

- -If the To header field in the request did not contain a tag, the URI in the To header field in the response MUST equal the URI in the To header field. [RFC3261 8.2.6.2]
- -If the To header field in the request did not contain a tag, the UAS MUST add a tag to the To header field in the response. [RFC3261 8.2.6.2]

* Via

- -The Via header field values in the response MUST equal the Via header field values in the request.[RFC3261 8.2.6.2]
- -The Via header field values in the response MUST maintain the same ordering.[RFC3261 8.2.6.2]
- -If the host portion of the "sent-by" parameter contains a domain name, or if it contains an IP address that differs from the packet source address, the server MUST add a "received" parameter to that Via header field value.[RFC3261 18.2.1]
- -The "sent-by" parameter MUST contain the source address from which the packet was received.[RFC3261 18.2.1]
- -The response MUST be sent to the address in the "received" parameter, using the port indicated in the "sent-by" value, or using port 5060 if none is specified explicitly.[RFC3261 18.2.2]

3.17 generic_3XX-6XX

Generic judgement items for 3XX-6XX response.

- -The empty line MUST be present even if the message-body is not. [RFC3261 7]
- Header fields:
 - * Call-ID

-The Call-ID header field of the response MUST equal the Call-ID header field of the request.[RFC3261 8.2.6.2]

* Content-length

-The Content-Length header field value MUST be set to zero. [RFC3261 20.14]

* CSeq

-The CSeq header field of the response MUST equal the CSeq field of the request.[RFC3261 8.2.6.2]

* From

-The From field of the response MUST equal the From header field of the request.[RFC3261 8.2.6.2]

* P-Called-Party-ID

-A UAC MUST NOT insert a P-Called-Party-ID header field in any SIP request or response.[RFC3455 4.2.2.1]

* To

- -If a request contained a To tag in the request, the To header field in the response MUST equal that of the request.[RFC3261 8.2.6.2]
- -If the To header field in the request did not contain a tag, the URI in the To header field in the response MUST equal the URI in the To header field. [RFC3261 8.2.6.2]
- -If the To header field in the request did not contain a tag, the UAS MUST add a tag to the To header field in the response. [RFC3261 8.2.6.2]
- -The same tag MUST be used for all responses to that request, both final and provisional. [RFC3261 8.2.6.2]

* Via

- -The Via header field values in the response MUST equal the Via header field values in the request. [RFC3261 8.2.6.2]
- -The Via header field values in the response MUST maintain the same ordering.[RFC3261 8.2.6.2]
- -If the host portion of the "sent-by" parameter contains a domain name, or if it contains an IP address that differs from the packet source address, the server MUST add a "received" parameter to that Via header field value.[RFC3261 18.2.1]
- -The "sent-by" parameter MUST contain the source address from which the packet was received.[RFC3261 18.2.1]
- -The response MUST be sent to the address in the "received" parameter, using the port indicated in the "sent-by" value, or using port 5060

if none is specified explicitly.[RFC3261 18.2.2]

3.18 generic_non2XX-ACK

Generic judgement items for ACK-non2XX request.

See generic_sip_message

- -The empty line MUST be present even if the message-body is not. [RFC3261 7]
- -The ACK MUST be sent to the same address, port, and transport to which the original request was sent.[RFC3261 17.1.1.2]
- -The ACK request constructed by the client transaction MUST contain values for the Call-ID, From, and Request-URI that are equal to the values of those header fields in the request passed to the transport by the client transaction. [RFC3261 17.1.1.3]

- Request-Line:

- -The Request-URI MUST NOT contain unescaped space control characters. [RFC3261 7.1]
- -The Request-URI MUST NOT be enclosed in "<>". [RFC3261 7.1]

- Header fields:

- -A valid SIP request formulated by a UAC MUST contain To, From, CSeq, Call-ID, Max-Forwards, and Via header fields. [RFC3261 8.1.1]
- -Require and Proxy-Require MUST NOT be used in a SIP CANCEL request, or in an ACK request sent for a non-2xx response. [RFC3261 8.2.2.3]

* Content-length

-The Content-Length header field value MUST be set to zero. [RFC3261 20.14]

* CSeq

- -The method in the CSeq header field MUST match that of the request. [RFC3261 8.1.1.5]
- -The sequence number value in the CSeq header field MUST be expressible as a 32-bit unsigned integer. [RFC3261 8.1.1.5] [RFC3261 20.16]
- -The sequence number value in the CSeq header field MUST be less than 2**31. [RFC3261 8.1.1.5]
- -The CSeq header field in the ACK MUST contain the same value for the sequence number as was present in the original request. [RFC3261 17.1.1.3]
- -The method parameter MUST be equal to "ACK".[RFC3261 17.1.1.3]

* Max-Forwards

- -A UAC MUST insert a Max-Forwards header field into each request it originates. [RFC3261 8.1.1.6]
- -The Max-Forwards header field value SHOULD be 70.[RFC3261 8.1.1.6]

* P-Called-Party-ID

-A UAC MUST NOT insert a P-Called-Party-ID header field in any SIP request or response.[RFC3455 4.2.2.1]

* Route

-The Route header fields MUST appear in the ACK if the INVITE request whose response is being acknowledged had Route header fields. [RFC3261 17.1.1.3]

* To

-The To header field in the ACK MUST equal the To header field in the response being acknowledged.[RFC3261 17.1.1.3]

* Via

- -The protected server port SHALL be included in the Via header entry relating to the UE.[TS24.229 5.1.2A.1]
- -A UAC MUST insert a Via into that request. [RFC3261 8.1.1.7]
- -The protocol name and protocol version in the Via header field MUST be SIP and 2.0. [RFC3261 8.1.1.7]
- -The Via header field value MUST contain a branch parameter. [RFC3261 8.1.1.7]
- -The branch ID MUST always begin with the characters "z9hG4bK". [RFC3261 8.1.1.7]
- -The ACK MUST contain a single Via header field.[RFC3261 17.1.1.3]
- -The single Via header field MUST be equal to the top Via header field of the original request.[RFC3261 17.1.1.3]

- Bodies fields:

-Placement of bodies in ACK for non-2xx is NOT RECOMMENDED. [RFC3261 17.1.1.3]

3.19 generic_OPTIONS

Generic judgement items for OPTIONS request.

See generic_sip_message

-The empty line MUST be present even if the message-body is not. [RFC3261 7]

- Request-Line:

- -The Request-URI MUST NOT contain unescaped space control characters. [RFC3261 7.1]
- -The Request-URI MUST NOT be enclosed in "<>". [RFC3261 7.1]
- -The initial Request-URI of the message SHOULD be set to the value of the URI in the To field.[RFC3261 8.1.1.1]

- Header fields:

- -A valid SIP request formulated by a UAC MUST contain To, From, CSeq, Call-ID, Max-Forwards, and Via header fields. [RFC3261 8.1.1]
- -These requests MUST also have both a Require and Proxy-Require header fields with the value "sec-agree".[RFC3329 2.3.1]

* Accept

-An Accept header field SHOULD be included to indicate the type of message body the UAC wishes to receive in the response. [RFC3261 11.1]

* Allow

-A UA that supports INVITE MUST also support ACK, CANCEL and BYE. [RFC3261 13.1]

* Content-length

-The Content-Length header field value MUST be set to zero. [RFC3261 20.14]

* CSeq

- -The method in the CSeq header field MUST match that of the request. $[RFC3261\ 8.1.1.5]$
- -The sequence number value in the CSeq header field MUST be expressible as a 32-bit unsigned integer. [RFC3261 8.1.1.5] [RFC3261 20.16]
- -The sequence number value in the CSeq header field MUST be less than 2**31. [RFC3261 8.1.1.5]

* From

-The From field MUST contain a new "tag" parameter, chosen by the UAC. [RFC3261 8.1.1.3]

* Max-Forwards

- -A UAC MUST insert a Max-Forwards header field into each request it originates.[RFC3261 8.1.1.6]
- -The Max-Forwards header field value SHOULD be 70.[RFC3261 8.1.1.6]

* P-Called-Party-ID

-A UAC MUST NOT insert a P-Called-Party-ID header field in any SIP request or response.[RFC3455 4.2.2.1]

* P-Preferred-Identity

- -The P-Preferred-Identity header field SHALL be used as the public user identity for the request if a P-Preferred-Identity was included. [TS24.229 5.1.2A.1]
- -The default public user identity for the security association SHALL be used as the public user identity for the request if no P-Preferred-Identity was included.[TS24.229 5.1.2A.1]

* Proxy-Require

-A UAC MUST insert a Proxy-Require header field into the request listing the option tag for that extension. [RFC3261 8.1.1.9]

* Route

- -A proper preloaded Route header value SHALL be built in Route header for all new dialogs and standalone transactions.[TS24.229 5.1.2A.1]
- -A list of Route header values made out of the P-CSCF URI and the values received in the Service-Route header saved from the 200 (OK) response to the last registration SHALL be built in Route header.[TS24.229 5.1.2A.1]
- -If the request contains a Route header field, the request SHOULD be sent to the locations derived from its topmost value.[RFC3261 8.1.2]

* Security-Verify

- -All the subsequent SIP requests sent by the client to that server SHOULD make use of the security mechanism initiated in the previous step. [RFC3329 2.3.1]
- -These requests MUST contain a Security-Verify header field that mirrors the server's list received previously in the Security- Server header field. [RFC3329 2.3.1]

* To

-A request outside of a dialog MUST NOT contain a To tag. [RFC3261 8.1.1.2]

* Via

- -The protected server port SHALL be included in the Via header entry relating to the UE.[TS24.229 5.1.2A.1]
- -A UAC MUST insert a Via into that request. [RFC3261 8.1.1.7]
- -The protocol name and protocol version in the Via header field MUST be SIP and 2.0. [RFC3261 8.1.1.7]
- -The Via header field value MUST contain a branch parameter. [RFC3261 8.1.1.7]
- -The branch ID MUST always begin with the characters "z9hG4bK". [RFC3261 8.1.1.7]
- -The client transport MUST insert a value of the "sent-by" field into the Via header field.[RFC3261 18.1.1]
- -The usage of an FQDN in sent-by field is RECOMMENDED. [RFC3261 18.1.1]

3.20 generic 200-OPTIONS

Generic judgement items for 200-OPTIONS response.

- -TUs SHOULD respond immediately to non-INVITE requests.[RFC3261 17.1]
- Header fields:
 - -Allow, Accept, Accept-Encoding, Accept-Language, and Supported header fields SHOULD be present in a 200 (OK) response to an OPTIONS request. [RFC3261 11.2]
 - * Allow
 - -All UAs MUST support the OPTIONS method.[RFC3261 11]
 - * Allow-Events
 - -Any node implementing one or more event packages SHOULD include an appropriate "Allow-Events" header indicating all supported events in all methods which initiate dialogs and their responses and OPTIONS responses.[RFC3265 3.3.7]
 - * Call-ID
 - -The Call-ID header field of the response MUST equal the Call-ID header field of the request.[RFC3261 8.2.6.2]
 - * Content-Encoding
 - -If the body has not undergone any encoding such as compression,

then Content-Encoding MUST be omitted. [RFC3261 7.4.1]

* Content-Type

- -The Internet media type of the message body MUST be given by the Content-Type header field.[RFC3261 7.4.1]
- -The Content-Type header field MUST be present if the body is not empty. [RFC3261 20.15]

* CSeq

-The CSeq header field of the response MUST equal the CSeq field of the request.[RFC3261 8.2.6.2]

* From

-The From field of the response MUST equal the From header field of the request.[RFC3261 8.2.6.2]

* P-Called-Party-ID

-A UAC MUST NOT insert a P-Called-Party-ID header field in any SIP request or response.[RFC3455 4.2.2.1]

* To

- -If the To header field in the request did not contain a tag, the URI in the To header field in the response MUST equal the URI in the To header field. [RFC3261 8.2.6.2]
- -If the To header field in the request did not contain a tag, the UAS MUST add a tag to the To header field in the response. [RFC3261 8.2.6.2]

* Via

- -The Via header field values in the response MUST equal the Via header field values in the request.[RFC3261 8.2.6.2]
- -The Via header field values in the response MUST maintain the same ordering. [RFC3261 8.2.6.2]
- -If the host portion of the "sent-by" parameter contains a domain name, or if it contains an IP address that differs from the packet source address, the server MUST add a "received" parameter to that Via header field value.[RFC3261 18.2.1]
- -The "sent-by" parameter MUST contain the source address from which the packet was received.[RFC3261 18.2.1]
- -The response MUST be sent to the address in the "received" parameter, using the port indicated in the "sent-by" value, or using port 5060 if none is specified explicitly.[RFC3261 18.2.2]

- Bodies fields:

- -The SDP payloads SHALL not be encrypted.[TS24.229 6.1.1]
- -Only SDP payload SHALL be contained in SIP messages when the SDP payload must be included in the message.[TS24.229 6.1.1]
- -If the types include one that can describe media capabilities, the UAS SHOULD include a body in the response for that purpose. [RFC3261 11.2]
- -The Session Description Protocol MUST be supported by all user agents as a means to describe sessions.[RFC3261 13.2.1]
- -Whitespace MUST NOT be used on either side of the "=" sign. [RFC4566 5]
- -v,o,s,(c),t,m,(c) lines are REQUIRED in the SDP message.
- (c line MUST included session level information or all of media information) [RFC4566 5]
- -all MUST appear in exactly the following order:
- v,o,s,(i),(u),(e),(p),(c),(b),t,(r),(z),(k),(a),m,(i),(c),(b),(k),(a) (the line enclosed in "()" is OPTIONAL)[RFC4566 5]

* o line

-For both IP4 and IP6, the fully qualified domain name is the form that SHOULD be given unless this is unavailable, in which case the globally unique address MAY be substituted.[RFC4566 5.2]

* s line

- -There MUST be one and only one "s=" field per session description. [RFC4566 5.3]
- -The "s=" field MUST NOT be empty. [RFC4566 5.3]
- -If a session has no meaningful name, the value "s= " SHOULD be used. [RFC4566 5.3]

* c line

- -A session description MUST contain either at least one "c=" field in each media description or a single "c=" field at the session level. $[RFC4566\ 5.7]$
- -A session-level "c=" field $\,$ MUST NOT specify Multiple addresses or "c=" lines.[RFC4566 5.7]
- -The slash notation for multiple addresses MUST NOT be used for IP unicast addresses on a media-leve.[RFC4566 5.7]

* b line

-The proposed bandwidth for each media stream utilizing the ""b="" media descriptor and the ""AS"" bandwidth modifier in the SDP SHALL be specified for ""video"" and ""audio"" media types that utilize the RTP/RTCP.[TS24.229 6.1.1]

4. Test Profile: User Equipment operation

4.1 Registration

4.1.1 UE-RG-B-1 - Initial registration and subscription for the registration state event package (SIP default port values)

[NAME]

UE-RG-B-1 - Initial registration and subscription for the registration state event package (SIP default port values)

[TARGET]

IMS User Equipment (NUT)

[PURPOSE]

- (1) To verify that the UEa1 properly sends the initial REGISTER request to the SIP default port values and registers its public user identity when the UEa1 does not receive any specific port information during the P-CSCF discovery procedure.
- (2) To verify that the UEa1 properly subscribes to the reg event package for the public user identity registered at the user's registrar and performs upon receipt of a NOTIFY request on the dialog which was generated during subscription to the reg event package.

4.1.2 UE-RG-B-2 - User-initiated reregistration

[NAME]

UE-RG-B-2 - User-initiated reregistration

[TARGET]

IMS User Equipment (NUT)

[PURPOSE]

- (1) To verify that the UEa1 properly reregisters an already registered public user without a challenge response when half of the time has expired when the previous registration was for 1200 seconds or less.
- (2) To verify that the UEa1 properly protects the REGISTER request using a security association, established as a result of an earlier registration.

See generic_200-NOTIFY

*2: 11 REGISTER for reregistration from NUT to P-CSCF

See generic_re_REGISTER

The UE SHALL use the expiry attribute within the <contact> sub-element that the UE registered to adjust the expiration time for that public user identity.[TS24.229 5.1.1.5.2]

*3: 13 REGISTER for authentication

See generic_Auth_REGISTER

4.1.4 UE-RG-B-4 - User-initiated reregistration

[NAME]

UE-RG-B-4 - User-initiated deregistration

[TARGET]

IMS User Equipment (NUT)

[PURPOSE]

- (1) To verify that the UEa1 properly deregisters a public user identity that it has previously registered with its contact address and deletes the security associations.
- (2) To verify that the UEa1 properly protects the REGISTER request using a security association established as a result of an earlier registration.
- (3) To verify that the UEa1 properly considers subscription to the reg event package cancelled.

(i.e. as if the UE had sent a SUBSCRIBE request with an Expires header containing a value of zero).

12. <No response or ICMP error>

[OBSERVABLE RESULTS]

*1: 10 NOTIFY 200 OK from NUT to P-CSCF

See generic_200-NOTIFY

*2: 12 No response or ICMP error

All dialogs related to those public user identities SHALL be relaesed when the event attribute is set to "rejected". [TS24.229 5.1.1.7]

- Security Behavior:

The UE SHALL delete the security associations towards the P-CSCF if all <registration> element(s) have their state attribute set to "terminated". [TS24.229 5.1.1.7]

The UE SHALL delete the security associations towards the P-CSCF if each <registration> element that was registered by this UE has either the state attribute set to "terminated", or the state attribute set to "active" and the state attribute within the <contact> element belonging to this UE set to "terminated".[TS24.229 5.1.1.7]

The security associations towards the P-CSCF SHALL be deleted after the server transaction pertaining to the received NOTIFY request terminates. [TS24.229 5.1.1.7]

4.1.6 UE-RG-B-6 - Netowrk-initiated deregistration with deactivated event

[NAME]

UE-RG-B-6 - Network-initiated deregistration with deactivated event

[TARGET]

IMS User Equipment (NUT)

[PURPOSE]

- (1) To verify that the UEa1 properly receives a NOTIFY request carrying information related to the reg event package and answers to a network-initiated deregistration event on the dialog.
- (2) To verify that the UEa1 properly delete the security associations towards the P-CSCF after the server transaction pertaining to the received NOTIFY request terminates.
- (3) To verify that the UEa1 properly starts the initial registration procedure in case of a "deactivated" event attribute.

[OBSERVABLE RESULTS]

*1: 18 No response or ICMP error

The process of all ongoing dialogs and transactions SHALL be stopped and silently discarded them locally.[TS24.229 5.1.1.4]

The UAC SHOULD NOT immediately re-attempt a registration to the same

registrar.[RFC3261 10.2.7]

4.1.16 UE-RG-B-16 - Reception of 401 response with no Security-Server header to initial registration

[NAME]

UE-RG-B-16 - Reception of 401 response with no Security-Sever header to initial registration

[TARGET]

IMS User Equipment (NUT)

[PURPOSE]

To verify that the UEa1 properly abandons the authentication procedure and sends a new REGISTER request with a new Call-ID when Security-Sever header is not present.

[REFERENCE]

TS24.229 5.1.1.2 TS24.229 5.1.1.5.1

[REQUIREMENT]

[OBSERVABLE RESULTS]

*1: 3 REGISTER from NUT to P-CSCF

See generic_REGISTER

- Header field:
 - * Call-ID

Authentication procedure SHALL be abandoned and a new REGISTER request SHALL be sent with a new Call-ID if the Security-Server header field is not present or it does not contain the parameters required for the setup of the set of security associations.[TS24.229 5.1.1.5.1]

*2: 5 REGISTER for authentication from NUT to P-CSCF

See generic_Auth_REGISTER

4.1.17 UE-RG-B-17 - Charge from the old SAs to the new SAs

[NAME]

UE-RG-B-17 - Change from the old SAs to the new SAs

[TARGET]

IMS User Equipment (NUT)

[PURPOSE]

To verify that the UEa1 properly deletes the old set of security associations and related keys it may have with the P-CSCF after all SIP transactions that use the old set of security associations are completed if the first request or response protected with the newly established set of security associations is received from the P-CSCF.

23. < No response or ICMP error >

[OBSERVABLE RESULTS]

*1: 19 ACK with SA2 from NUT to P-CSCF

See generic_ACK

- Security behavior:

The newly established set of security associations SHALL be used for further messages sent towards the P-CSCF as appropriate.[TS24.229 5.1.1.5.1]

The previous security associations SHALL be replaced the new security associations. [TS33.203 7.4]

The sever ports of UE and P-CSCF SHALL not be changed, while the protected client portsof UE and P-CSCF SHALL change. [TS33.203 7.4]

*2: 20 BYE with SA2 from NUT to P-CSCF

See generic_BYE

- Security behavior:

The newly established set of security associations SHALL be used for further messages sent towards the P-CSCF as appropriate.[TS24.229 5.1.1.5.1]

*3: 23 No response or ICMP error

- Security behavior:

The newly established set of security associations SHALL be used for further messages sent towards the P-CSCF as appropriate.[TS24.229 5.1.1.5.1]

The old set of security associations SHALL be deleted after all SIP transactions that use the old set of security associations are completed.[TS24.229 5.1.1.5.1]

4.1.18 UE-RG-B-18 - Reception of 403 response to initial registration

[NAME]

UE-RG-B-18 - Reception of 403 response to initial registration

[TARGET]

IMS User Equipment (NUT)

[PURPOSE]

- (1) To verify that the UEa1 properly considers the registration to have failed and deletes the temporary set of security associations it was trying to establish when a 403 (Forbidden) response is received.
- (2) To verify that the UEa1 properly resends a new REGISTER with the old set of security associations.
- (3) To verify that the UEa1 properly sends an unprotected REGISTER message when the old set of security associations are no longer active at the P-CSCF.

See generic_SUBSCRIBE

*5: 24 NOTIFY 200 OK with SA2 from NUT to P-CSCF

See generic_200-NOTIFY

4.1.19 UE-RG-B-19 - Invalid authentication parameter

[NAME]

UE-RG-B-19 - Invalid authentication parameter

[TARGET]

IMS User Equipment (NUT)

[PURPOSE]

To verify that the UEa1 properly responds with a further REGISTER indicating to the S-CSCF that the challenge has been deemed invalid and only responds to two consecutive invalid challenges and does not automatically attempt authentication after two consecutive failed attempts to authenticate.

17. <No more REGISTER request>

[OBSERVABLE RESULTS]

*1: 13 REGISTER for authentication from NUT to P-CSCF

See generic_Auth_REGISTER

The REGISRER request for authentication that includes the cause of failure

196

SHALL be sent towards the Home Network.[TS33.203 6.1.2.2]

- Security behavior:

The REGISTER request SHALL be sent using an existing set of security associations. [TS24.229 5.1.1.5.3]
A temporary set of security associations SHALL not be created.
[TS24.229 5.1.1.5.3]

The REGISTER request which may pass through an already established SA and indicate a network authentication failure SHALL be sent to the P-CSCF. [TS33.203 7.3.1.2]

- Header field:

* Authorization

No AUTS directive and an empty response directive SHALL be contained in the subsequent REGISTER request.[TS24.229 5.1.1.5.3]

* Security-Client

Security-Client header field SHALL be set to the security mechanism it supports, the IPsec layer algorithms for integrity and confidentiality protection it supports and the new parameter values needed for the setup of two new pairs of security associations. [TS24.229 5.1.1.5.3]

*2: 15 REGISTER for authentication from NUT to P-CSCF

See generic_Auth_REGISTER

The REGISRER request for authentication that includes the cause of failure SHALL be sent towards the Home Network.[TS33.203 6.1.2.2]

- Security behavior:

The REGISTER request SHALL be sent using an existing set of security associations.[TS24.229 5.1.1.5.3]
A temporary set of security associations SHALL not be created.

[TS24.229 5.1.1.5.3]

The REGISTER request which may pass through an already established SA and indicate a network authentication failure SHALL be sent to the P-CSCF. [TS33.203 7.3.1.2]

- Header field:

* Authorization

The AUTS directive SHALL be contained in the subsequent REGISTER request.[TS24.229 5.1.1.5.3]

The client MUST calculate its credentials using an empty password.[RFC3310-3.4-1]

* Security-Client

Security-Client header field SHALL be set to the security mechanism it supports, the IPsec layer algorithms for integrity and confidentiality protection it supports and the new parameter values needed for the setup of two new pairs of security associations. [TS24.229 5.1.1.5.3]

*3: 17 No more REGISTER request

The REGISTER request SHALL be only sent to two consecutive invalid challenges and SHALL not be automatically sent authentication after two consecutive failed attempts to authenticate. [TS24.229 5.1.1.5.3]

4.1.20 UE-RG-B-20 - User-initiated deregistration and dialog release

[NAME]

UE-RG-B-20 - User-initiated deregistration and dialog release

[TARGET]

IMS User Equipment (NUT)

[PURPOSE]

To verify that UEa1 properly releases all dialogs related to the public user identity that is going to be deregistered or to one of the implicitly registered public user identities except the dialog used for subscription to reg event package.

[OBSERVABLE RESULTS]

*1: 15 BYE from NUT to P-CSCF

See generic_BYE

All dialogs related to the public user identity that is going to be deregistered or to one of the implicitly registered public user identities SHALL be released prior to sending a REGISTER request for deregistration.[TS24.229 5.1.1.6]

*2: 17 NOTIFY 200 OK from NUT to P-CSCF

See generic_200-NOTIFY

The dialog SHALL not be released if the dialog that was established by the UE subscribing to the reg event package used the public user identity and the dialog is the only remaining dialog used for subscription to reg event package.

[TS24.229 5.1.1.6]

*3: 19 No SUBSCRIBE (with expires=0) from NUT to P-CSCF

The dialog SHALL not be released if the dialog that was established by the UE subscribing to the reg event package used the public user identity and the dialog is the only remaining dialog used for subscription to reg event package.

[TS24.229 5.1.1.6]

*4: 20 REGISTER for deregistration from NUT to P-CSCF

See generic_de_REGISTER

[OBSERVABLE RESULTS]

*1: 1 INVITE from NUT to P-CSCF.

See generic_INVITE

*2: 5 ACK from NUT to P-CSCF

See generic_ACK

*3: 7 200 OK from NUT to P-CSCF

See generic_200

4.2.2 UE-SE-B-2 - Session initiation and termination (Sends INVITE and sends BYE)

[NAME]

UE-SE-B-2 - Session initiation and termination (Sends INVITE and sends BYE)

[TARGET]

IMS User Equipment (NUT)

[PURPOSE]

- (1) To verify that the UEa1 properly creates INVITE request and receives the responses relating to INVITE request.
- (2) To verify that the UEa1 properly creates BYE request and receives the responses to BYE request.

[REFERENCE]

[TS24.229 6.1.1],[TS24.229 6.1.1],[TS24.229 6.1.1]

[REQUIREMENT]

[PURPOSE]

- (1) To verify that the UEa1 properly receives INVITE request and creates the responses relating INVITE request.
- (2) To verify that the UEa1 properly creates BYE request and receives the responses to BYE request.

IMS User Equipment (NUT)

[PURPOSE]

- (1) To verify that the UEa1 properly creates a CANCEL request.
- (2) To verify that the UEa1 properly process a 487 (Request Terminated) response and creates an ACK request.

[OBSERVABLE RESULTS]

*1: 4 CANCEL 200 OK from NUT to P-CSCF.

See generic_200-CANCEL

*2: 5 487 Request Terminated from NUT to P-CSCF.

See generic_3XX-6XX

- Status-Line:

The Status-Code in the Status-Line SHOULD be a 487 (Request Terminated). [RFC3261 9.2]

4.2.7 UE-SE-B-7 - SIP response received from the P-CSCF outside of the registration

[NAME]

UE-SE-B-7 - SIP response received from the P-CSCF outside of the registration

60

[TARGET]

IMS User Equipment (NUT)

[PURPOSE]

To verify that the UEa1 properly discards any SIP response that is not protected by the security association and is received from the P-CSCF outside of the registration .

[REFERENCE]

TS24229 5.1.2A.1

[REQUIREMENT]

NONE

[PARAMETER(NUT)]

public-user-id : sip:UEa1_public_1@under.test.com private-user-id : UEa1_private@under.test.com

[OBSERVABLE RESULTS]

*1: 4 INVITE from NUT to P-CSCF.

See generic_INVITE

UE SHALL not automatically reattempt the request until after the period indicated

by the Retry-After header contents.[TS24.229 5.1.3.1]

4.2.10 UE-SE-B-10 - Receiving forked 180 and response

[NAME]

UE-SE-B-10 - Receiving forked 180 and 200 response

[TARGET]

IMS User Equipment (NUT)

[PURPOSE]

(1)To verify that UEa1 properly receives forked 180(Ringing) and 200(OK) responses.

(2)To verify that UEa1 properly sends BYE to UEa3.

[REFERENCE]

TS24.229-5.1.3.1

[OBSERVABLE RESULTS]

*1: 8 ACK from NUT to P-CSCF

See generic_ACK

The UE SHALL acknowledge the response with an ACK request. [TS24.229 5.1.3.1]

The UAC core MUST generate an ACK request for each 2xx received from the transaction layer.[RFC3261 13.2.4]

The sequence number of the CSeq header field MUST be the same as the INVITE being acknowledged.[RFC3261 13.2.4]

The CSeq method MUST be ACK.[RFC3261 13.2.4]

*2: 9 BYE from NUT to P-CSCF

See generic_BYE

The UE SHALL send a BYE request to this dialog in order to terminate it. [TS24.229 5.1.3.1]

4.3 SDP

4.3.1 UE-SD-B-1 - SDP offer which included one or more media lines which was offered with several codecs (Receives INVITE and sends BYE)

[NAME]

UE-SD-B-1 - SDP offer which included one or more media lines which was offered with several codecs (Receives INVITE and sends BYE)

[TARGET]

IMS User Equipment (NUT)

[PURPOSE]

To verify that the UEa1 properly process an INVITE with a SDP offer which included one or more media lines which was offered with several codecs, and responds with a 200 (OK) response included proper SDP selecting exactly one codec per payload and indicate only the selected codec for the related media stream.

[OBSERVABLE RESULTS]

*1: 3 INVITE 200 OK from NUT to P-CSCF.

See generic_200-INVITE

- Messge Body:

Upon sending a SDP answer to an SDP offer the terminating UE SHALL select exactly one codec per payload and indicate only the selected codec for the related media stream. [TS24.229 6.1.3]

4.3.2 UE-SD-B-2 - SDP offer which included an IP address type that is not supported (Receives INVITE and sends BYE)

[NAME]

UE-SD-B-2 - SDP offer which included an IP address type that is not supported (Receives INVITE and sends BYE)

07

[TARGET]

IMS User Equipment (NUT)

[PURPOSE]

To verify that the UEa1 properly process an INVITE with a SDP offer which included an IP address type that is not supported by the UEa1, and responds with a 488 (Not Acceptable Here) response with 301 Warning header indicating "incompatible network address format".

[OBSERVABLE RESULTS]

*1: 7 CANCEL 481 Does Not Exist from NUT to P-CSCF.

See generic_3XX-6XX

The UAS SHOULD respond to the CANCEL with a 481 (Call Leg/Transaction Does Not Exist). [RFC3261 9.2]

UAS MUST respond to the request with a 481 (Call/Transaction Does Not Exist) status code and pass that to the server transaction if the UAS wishes to reject the request because it does not wish to recreate the dialog.[RFC3261 12.2.2]

If the server retransmits the 2xx response for 64*T1 seconds without receiving an ACK, the dialog is confirmed, but the session SHOULD be terminated.[RFC3261 13.3.1.4]

4.5.5 UE-TM-B-5 - Timer F expiration (In Session)

[OBSERVABLE RESULTS]

*1: 2 415 Unsupported Media Type from NUT to P-CSCF.

See generic_3XX-6XX

- Header Field:

The response MUST contain an Accept header field listing the types of all bodies it understands, in the event the request contained bodies of types not supported by the UAS.[RFC3261 8.2.3]

If the request contained content encodings not understood by the UAS, the response MUST contain an Accept-Encoding header field listing the encodings understood by the UAS.[RFC3261 8.2.3]

If the request contained content with languages not understood by the UAS, the response MUST contain an Accept-Language header field indicating the languages understood by the UAS.[RFC3261 8.2.3]

The server MUST return a list of acceptable formats using the Accept, Accept-Encoding, or Accept-Language header field, depending on the specific problem with the content.[RFC3261 21.4.13]

[OBSERVABLE RESULTS]

*1: 2 416 Unsupported URI Scheme from NUT to P-CSCF.

See generic_3XX-6XX

4.6.8 UE-SR-B-8 - Sending 420 response

[NAME]

UE-SR-B-8 - Sending 420 response.

[TARGET]

IMS User Equipment (NUT)

[PURPOSE]

To verify that UEa1 sends 420(Bad Extention) response to INVITE request that included Require header with wrong value.

[REFERENCE]

TS24.229 A.2.1.4.1 RFC3261 21.4.15 [RFC3261 8.2.2.3]

[REQUIREMENT]

NONE

[PARAMETER(NUT)]

 $\begin{array}{lll} public\text{-user-id} & : & sip:UEa1_public_1@under.test.com \\ private\text{-user-id} & : & UEa1_private@under.test.com \\ \end{array}$

[OBSERVABLE RESULTS]

*1: 6 500 Server Internal Error from NUT to P-CSCF.

See generic_3XX-6XX

If the remote sequence number is empty, it MUST be set to the value of the sequence number in the CSeq header field value in the request. [RFC3261 12.2.2]

4.6.13 UE-SR-B-13 - Sending 505 response

[NAME]

UE-SR-B-13 - Sending 505 response.

[TARGET]

IMS User Equipment (NUT)

[PURPOSE]

To verify that UEa1 sends 505(Version Not Supported) response to INVITE that has illeagal SIP version in Request-Line.

[REFERENCE]

TS24.229 A.2.1.4.1 RFC3261 21.5.6

[OBSERVABLE RESULTS]

*1: 4 181 Call is Being Forwarded from NUT to P-CSCF.

See generic_180-INVITE

*2: 7 ACK from NUT to P-CSCF.

See generic_ACK

*3: 9 BYE 200 OK from NUT to P-CSCF.

See generic_200-BYE

4.7.3 UE-RR-B-3 - Receiving 182 response (Request is queued by P-CSCFa2)

[NAME]

UE-RR-B-3 - Receiving 182 response (Request is queued by P-CSCFa2)

[TARGET]

IMS User Equipment (NUT)

[PURPOSE]

To verify that the UEa1 properly process a 182 (Queued) response, and verify that the UEa1 properly creates an ACK request and a 200 (OK) response to BYE.

[REFERENCE]

TS24.229 A.2.1.4.1

[REQUIREMENT]

NONE

[PARAMETER(NUT)]

public-user-id : sip:UEa1_public_1@under.test.com private-user-id : UEa1_private@under.test.com

4.7.13 UE-RR-B-13 - Receiving 415 response

[NAME]

UE-RR-B-13 - Receiving 415 response

[TARGET]

IMS User Equipment (NUT)

[PURPOSE]

To verify that the UEa1 properly process a 415 (Unsupported Media Type) response, and verify that the UEa1 properly creates an ACK request and retry modified INVITE request.

[REFERENCE]

TS24.229 A.2.1.4.1

[REQUIREMENT]

Two media type support.

[PARAMETER(NUT)]

 $\begin{array}{lll} public\text{-user-id} & : & sip:UEa1_public_1@under.test.com \\ private\text{-user-id} & : & UEa1_private@under.test.com \\ \end{array}$

4.8 SigComp

4.8.1 UE-SC-B-1 - SigComp for IMS (Sends INVITE and receives BYE)

[NAME]

UE-SC-B-1 - SigComp for IMS (Sends INVITE and receives BYE)

[TARGET]

IMS User Equipment (NUT)

[PURPOSE]

To verify that the UEa1 properly uses SigComp to signaling.

(1)To verify that the UEa1 doesn't use SigComp during set up SAs.

(2)To verify that the UEa1 properly uses SigComp to signaling.

(3)To verify that the UEa1 finished compertment when it is deregistered.

[REFERENCE]

[OBSERVABLE RESULTS]

*1: 1 REGISTER from NUT to P-CSCF

See generic_REGISTER

- Sigcomp behavior:

UE SHALL not creat the compartment untill security associations are set up. [TS24.229 8.1.1]

*2: 3 REGISTER for authentication from NUT to P-CSCF

See generic_Auth_REGISTER

- Header Field:
 - * P-Access-Network-Info
 UE SHALL insert a P-Access-Network-Info header into any request for
 a dialog, any subsequent request (except ACK requests and CANCEL
 requests) or response (except CANCEL responses) within a dialog or
 any request for a standalone method[TS24.229 5.1.2A.1]
- Sigcomp behavior:

 UE SHALL not creat the compartment untill security associations are set up.

 [TS24.229 8.1.1]

*3: 5 SUBSCRIBE from NUT to P-CSCF

See generic_SUBSCRIBE

- Header Field:
 - * Contact

If UE would like to receive subsequent requests within the same dialog in the UAS->UAC direction compressed, UE SHOULD add the parameter comp=sigcomp to the URI in the Contact header field. [RFC3486 4]

A SIP/SigComp application placing its URI with the 'comp=sigcomp' parameter in a header field MUST add a 'sigcomp-id' parameter with its SIP/SigComp identifier to that URI.[RFC5049 9.1]

The SIP URI 'sigcomp-id' parameter MUST contain a URN [RFC2141]. [RFC5049 9.1]

URN MUST be persistent as long as the application stores compartment state related to other SIP/SigComp applications.[RFC5049 9.1]

* P-Access-Network-Info

UE SHALL insert a P-Access-Network-Info header into any request for a dialog, any subsequent request (except ACK requests and CANCEL requests) or response (except CANCEL responses) within a dialog or any request for a standalone method[TS24.229 5.1.2A.1]

* Via

If UE would like to receive subsequent requests within the same dialog in the UAS->UAC direction compressed, UE SHOULD add the parameter comp=sigcomp to the topmost entry of the Via header field. [RFC3486 4]

A SIP/SigComp application generating its own Via entry containing the 'comp=sigcomp' parameter MUST add a 'sigcomp-id' parameter with its SIP/SigComp identifier to that Via entry.[RFC5049 9.1]

The Via 'sigcomp-id' parameter MUST contain a URN [RFC2141]. [RFC5049 9.1]

URN MUST be persistent as long as the application stores compartment state related to other SIP/SigComp applications.[RFC5049 9.1]

- Sigcomp behavior:

A client MUST NOT send a compressed request to a server if it does not know whether or not the server supports SigComp.[RFC3486 4]

*4: 8 200 OK to NOTIFY from NUT to P-CSCF

See generic_200-NOTIFY

- Header Field:
 - * P-Access-Network-Info

UE SHALL insert a P-Access-Network-Info header into any request for a dialog, any subsequent request (except ACK requests and CANCEL requests) or response (except CANCEL responses) within a dialog or any request for a standalone method[TS24.229 5.1.2A.1]

UE SHALL insert a P-Access-Network-Info header into any response to a request for a dialog, any subsequent request (except CANCEL requests) or response (except CANCEL responses) within a dialog or any response to a standalone method.[TS24.229 5.1.2A.2]

- Sigcomp behavior:

The dictionary SHALL be used to compress the first message. [TS24.229 8.1.1]

If the topmost Via header field contains the parameter comp=sigcomp, the response SHOULD be compressed.[RFC3486 5]

*5: 9 INVITE from NUT to P-CSCF

See generic_INVITE

- Header Field:

* Contact

If UE would like to receive subsequent requests within the same dialog in the UAS->UAC direction compressed, UE SHOULD add the parameter comp=sigcomp to the URI in the Contact header field. [RFC3486 4]

If UE sends a compressed request, UE SHOULD add the parameter comp=sigcomp to the URI in the Contact header field[RFC3486 4]

A SIP/SigComp application placing its URI with the 'comp=sigcomp' parameter in a header field MUST add a 'sigcomp-id' parameter with its SIP/SigComp identifier to that URI.[RFC5049 9.1]

The SIP URI 'sigcomp-id' parameter MUST contain a URN [RFC2141]. [RFC5049 9.1]

URN MUST be persistent as long as the application stores compartment state related to other SIP/SigComp applications.[RFC5049 9.1]

* P-Access-Network-Info

UE SHALL insert a P-Access-Network-Info header into any request for a dialog, any subsequent request (except ACK requests and CANCEL requests) or response (except CANCEL responses) within a dialog or

any request for a standalone method[TS24.229 5.1.2A.1]

* Via

If UE sends a compressed request, UE SHOULD add the parameter comp=sigcomp to the topmost entry of the Via header field. [RFC3486 4]

A SIP/SigComp application generating its own Via entry containing the 'comp=sigcomp' parameter MUST add a 'sigcomp-id' parameter with its SIP/SigComp identifier to that Via entry. [RFC5049 9.1]

The Via 'sigcomp-id' parameter MUST contain a URN [RFC2141]. [RFC5049 9.1]

URN MUST be persistent as long as the application stores compartment state related to other SIP/SigComp applications.[RFC5049 9.1]

- Sigcomp behavior:

If the next-hop URI contains the parameter comp=sigcomp, the UE SHOULD compress the request using SigComp[RFC3486 4][RFC5049 9.4]

*6: 13 ACK from NUT to P-CSCF

See generic_ACK

- Header Field:
 - * Via

If UE sends a compressed request, UE SHOULD add the parameter comp=sigcomp to the topmost entry of the Via header field. [RFC3486 4]

A SIP/SigComp application generating its own Via entry containing the 'comp=sigcomp' parameter MUST add a 'sigcomp-id' parameter with its SIP/SigComp identifier to that Via entry.[RFC5049 9.1]

The Via 'sigcomp-id' parameter MUST contain a URN [RFC2141]. [RFC5049 9.1]

URN MUST be persistent as long as the application stores compartment state related to other SIP/SigComp applications.[RFC5049 9.1]

- Sigcomp behavior:

If the next-hop URI contains the parameter comp=sigcomp, the UE SHOULD compress the request using SigComp.[RFC3486 4][RFC5049 9.4]

*7: 15 200 OK to BYE from NUT to P-CSCF

See generic_200

- Header Field:

* P-Access-Network-Info

UE SHALL insert a P-Access-Network-Info header into any request for a dialog, any subsequent request (except ACK requests and CANCEL requests) or response (except CANCEL responses) within a dialog or any request for a standalone method[TS24.229 5.1.2A.1]

UE SHALL insert a P-Access-Network-Info header into any response to a request for a dialog, any subsequent request (except CANCEL requests) or response (except CANCEL responses) within a dialog or any response to a standalone method.[TS24.229 5.1.2A.2]

- Sigcomp behavior:

If the topmost Via header field contains the parameter comp=sigcomp, the response SHOULD be compressed.[RFC3486 5]

*8: 17 200 OK to NOTIFY from NUT to P-CSCF

See generic_200-NOTIFY

- Header Field:

* P-Access-Network-Info

UE SHALL insert a P-Access-Network-Info header into any request for a dialog, any subsequent request (except ACK requests and CANCEL requests) or response (except CANCEL responses) within a dialog or any request for a standalone method[TS24.229 5.1.2A.1]

UE SHALL insert a P-Access-Network-Info header into any response to a request for a dialog, any subsequent request (except CANCEL requests) or response (except CANCEL responses) within a dialog or any response to a standalone method.[TS24.229 5.1.2A.2]

- Sigcomp behavior:

If the topmost Via header field contains the parameter comp=sigcomp, the response SHOULD be compressed.[RFC3486 5]

*9: 18 No response or send NACK

- Sigcomp behavior:

UE SHALL finish the compertment when the UE is deregistered.[TS24.229 8.1.1]

4.8.2 UE-SC-B-2 - SigComp for IMS (Receive INVITE and send BYE)

[OBSERVABLE RESULTS]

*1: 10 180 Ringing from NUT to P-CSCF

See generic_180-INVITE

- Header Field:
 - * P-Access-Network-Info
 UE SHALL insert a P-Access-Network-Info header into any request for
 a dialog, any subsequent request (except ACK requests and CANCEL
 requests) or response (except CANCEL responses) within a dialog or

any request for a standalone method[TS24.229 5.1.2A.1]

UE SHALL insert a P-Access-Network-Info header into any response to a request for a dialog, any subsequent request (except CANCEL requests) or response (except CANCEL responses) within a dialog or any response to a standalone method.[TS24.229 5.1.2A.2]

- Sigcomp behavior:

If the topmost Via header field contains the parameter comp=sigcomp, the response SHOULD be compressed.[RFC3486 5]

*2: 11 200 OK from NUT to P-CSCF

See generic_200-INVITE

- Header Field:
 - * Contact

UE SHOULD add comp=sigcomp to the Contact header field of the response if the URI of the next upstream hop in the route set contained the parameter

comp=sigcomp.[RFC3486 5]

A SIP/SigComp application placing its URI with the 'comp=sigcomp' parameter in a header field MUST add a 'sigcomp-id' parameter with its SIP/SigComp identifier to that URI.[RFC5049 9.1]

The SIP URI 'sigcomp-id' parameter MUST contain a URN [RFC2141]. [RFC5049 9.1]

URN MUST be persistent as long as the application stores compartment state related to other SIP/SigComp applications.[RFC5049 9.1]

* P-Access-Network-Info

UE SHALL insert a P-Access-Network-Info header into any request for a dialog, any subsequent request (except ACK requests and CANCEL requests) or response (except CANCEL responses) within a dialog or any request for a standalone method[TS24.229 5.1.2A.1]

UE SHALL insert a P-Access-Network-Info header into any response to a request for a dialog, any subsequent request (except CANCEL requests) or response (except CANCEL responses) within a dialog or any response to a standalone method.[TS24.229 5.1.2A.2]

- Sigcomp behavior:

If the topmost Via header field contains the parameter comp=sigcomp, the response SHOULD be compressed.[RFC3486 5]

*3: 13 BYE from NUT to P-CSCF

See generic_BYE

- Header Field:

* P-Access-Network-Info

UE SHALL insert a P-Access-Network-Info header into any request for a dialog, any subsequent request (except ACK requests and CANCEL requests) or response (except CANCEL responses) within a dialog or any request for a standalone method[TS24.229 5.1.2A.1]

* Via

If UE sends a compressed request, UE SHOULD add the parameter comp-sigcomp to the topmost entry of the Via header field.

[RFC3486 4]

A SIP/SigComp application generating its own Via entry containing the 'comp=sigcomp' parameter MUST add a 'sigcomp-id' parameter with its SIP/SigComp identifier to that Via entry. [RFC5049 9.1]

The Via 'sigcomp-id' parameter MUST contain a URN [RFC2141]. [RFC5049 9.1]

URN MUST be persistent as long as the application stores compartment state related to other SIP/SigComp applications.[RFC5049 9.1]

- Sigcomp behavior:

If the next-hop URI contains the parameter comp=sigcomp, the UE SHOULD compress the request using SigComp.[RFC3486 4][RFC5049 9.4]
